

**ANNEX I**

**SUMMARY OF PRODUCT CHARACTERISTICS**

## 1. NAME OF THE MEDICINAL PRODUCT

PegIntron 50 micrograms, powder and solvent for solution for injection in pre-filled pen

## 2. QUALITATIVE AND QUANTITATIVE COMPOSITION

Each pre-filled pen of PegIntron 50 micrograms contains a sufficient amount of peginterferon alfa-2b (conjugation of recombinant interferon alfa-2b with monomethoxy polyethylene glycol) in a powder for solution for injection, and the corresponding amount of solvent, to provide 50 micrograms in 0.5 ml of peginterferon alfa-2b when reconstituted as recommended.

For excipients, see 6.1.

## 3. PHARMACEUTICAL FORM

Powder and solvent for solution for injection

## 4. CLINICAL PARTICULARS

### 4.1 Therapeutic indications

PegIntron is indicated for the treatment of adult patients with histologically proven chronic hepatitis C who have elevated transaminases without liver decompensation and who are positive for serum HCV-RNA or anti-HCV.

The best way to use PegIntron in this indication is in combination with ribavirin.

This combination is indicated in naïve patients as well as in patients who have previously responded (with normalisation of ALT at the end of treatment) to interferon alpha monotherapy but who have subsequently relapsed.

Interferon monotherapy, including PegIntron, is indicated mainly in case of intolerance or contraindication to ribavirin.

Please refer also to the ribavirin Summary of Product Characteristics (SPC) when PegIntron is to be used in combination with ribavirin.

### 4.2 Posology and method of administration

Treatment should be initiated and monitored only by a physician experienced in the management of patients with hepatitis C.

#### Dose to be administered

PegIntron should be administered as a once weekly subcutaneous injection. The dose administered depends on whether it is used in combination with ribavirin or as monotherapy.

#### Combination therapy

PegIntron 1.5 micrograms/kg/week in combination with ribavirin capsules.

The dose of ribavirin to be used in combination with PegIntron is based on patient body weight (**Table 1**). Ribavirin capsules are to be administered orally each day in two divided doses with food (morning and evening).

<b>Table 1</b> Ribavirin dose based on body weight
--

Patient weight (kg)	Daily ribavirin dose	Number of 200 mg capsules
< 65	800 mg	4 <sup>a</sup>
65 – 85	1,000 mg	5 <sup>b</sup>
> 85	1,200 mg	6 <sup>c</sup>

a: 2 morning, 2 evening

b: 2 morning, 3 evening

c: 3 morning, 3 evening

**Duration of treatment:** Based on the results of clinical trials, it is recommended that patients be treated for at least six months. During those clinical trials in which patients were treated for one year, patients who failed to show a virological response after six months of treatment (HCV-RNA below lower limit of detection) were unlikely to become sustained virological responders (HCV-RNA below lower limit of detection six months after withdrawal of treatment).

- **Genotype 1:** Treatment should be continued for another six month period (i.e., a total of one year) in patients who exhibit negative HCV-RNA after six months of treatment.
- **Genotypes Non-1:** The decision to extend therapy to one year in patients with negative HCV-RNA after six months of treatment should be based on other prognostic factors (e.g., age > 40 years, male gender, bridging fibrosis).

### PegIntron monotherapy

As monotherapy the PegIntron regimen is 0.5 or 1.0 microgram/kg/week.

**Duration of treatment:** It is recommended that patients be treated initially for six months. In patients showing loss of HCV-RNA at six months, treatment is to be continued for an additional six months, i.e., one year of treatment.

### Dose modification for all patients

If severe adverse reactions or laboratory abnormalities develop during treatment with PegIntron monotherapy or PegIntron in combination with ribavirin, modify the dosages of each product if appropriate, until the adverse reactions abate. Guidelines were developed in clinical trials for dose modification (see Dosage modification guidelines, **Table 2a** for PegIntron monotherapy and **Table 2b** for PegIntron combination therapy with ribavirin).

<b>Table 2a</b> Dose modification guidelines for PegIntron monotherapy		
Laboratory values	Reduce PegIntron to one-half dose if:	Discontinue PegIntron if:
Neutrophils	< 0.75 x 10 <sup>9</sup> /l	< 0.5 x 10 <sup>9</sup> /l
Platelets	< 50 x 10 <sup>9</sup> /l	< 25 x 10 <sup>9</sup> /l

<b>Table 2b</b> Dose modification guidelines for combination therapy (with ribavirin)			
Laboratory values	Reduce only ribavirin dose to 600 mg/day* if:	Reduce only PegIntron dose to one-half dose if:	Discontinue combination therapy if:
Haemoglobin	< 10 g/dl	-	< 8.5 g/dl
Haemoglobin in: Patients with history of stable cardiac disease	≥ 2 g/dl decrease in haemoglobin during any four week period during treatment (permanent dose reduction)		< 12 g/dl after four weeks of dose reduction
White blood cells	-	< 1.5 x 10 <sup>9</sup> /l	< 1.0 x 10 <sup>9</sup> /l
Neutrophils	-	< 0.75 x 10 <sup>9</sup> /l	< 0.5 x 10 <sup>9</sup> /l
Platelets	-	< 50 x 10 <sup>9</sup> /l	< 25 x 10 <sup>9</sup> /l

Bilirubin – direct	-	-	2.5 x ULN**
Bilirubin – indirect	> 5 mg/dl	-	> 4 mg/dl (for > 4 weeks)
Creatinine	-	-	> 2.0 mg/dl
ALT/AST	-	-	2 x baseline and > 10 x ULN**

\* Patients whose dose of ribavirin is reduced to 600 mg daily receive one 200 mg capsule in the morning and two 200 mg capsules in the evening.

\*\* Upper limit of normal

### Special populations

**Use in renal impairment:** The clearance of PegIntron is reduced in patients with significant renal impairment. Patients with creatinine clearance  $\leq 50$  ml/minute must not be treated with PegIntron (see 5.2). It is recommended that patients with moderate renal impairment be closely monitored and that their weekly dose of PegIntron be reduced if medically appropriate.

**Use in hepatic impairment:** The safety and efficacy of PegIntron therapy has not been evaluated in patients with severe hepatic dysfunction, therefore PegIntron must not be used for these patients.

**Use in the elderly ( $\geq 65$  years of age):** There are no apparent age-related effects on the pharmacokinetics of PegIntron. Data from elderly patients treated with a single dose of PegIntron suggest no alteration in PegIntron dose is necessary based on age (see 5.2).

**Use in patients under the age of 18 years:** PegIntron is not recommended for use in children or adolescents under the age of 18, as there is no experience in this group.

### 4.3 Contraindications

- Hypersensitivity to the active substance or to any interferon or to any of the excipients;
- Pregnant women;
- Women who are breast-feeding;
- Existence of or a history of severe psychiatric condition, particularly severe depression, suicidal ideation or suicide attempt;
- A history of severe pre-existing cardiac disease, including unstable or uncontrolled cardiac disease in the previous six months (see 4.4);
- Severe, debilitating medical conditions, including patients with chronic renal failure or creatinine clearance  $< 50$  ml/minute;
- Autoimmune hepatitis or a history of autoimmune disease;
- Severe hepatic dysfunction or decompensated cirrhosis of the liver;
- Pre-existing thyroid disease unless it can be controlled with conventional treatment;
- Epilepsy and/or compromised central nervous system (CNS) function.

### 4.4 Special warnings and special precautions for use

There is no experience with PegIntron in combination with ribavirin in patients who have relapsed after interferon alpha + ribavirin therapy.

**Acute hypersensitivity:** Acute hypersensitivity reactions have been observed rarely during interferon alfa-2b therapy. If such a reaction develops during treatment with PegIntron, discontinue treatment and institute appropriate medical therapy immediately. Transient rashes do not necessitate interruption of treatment.

**Cardiovascular system:** As with interferon alfa-2b, patients with a history of congestive heart failure, myocardial infarction and/or previous or current arrhythmic disorders, receiving PegIntron therapy require close monitoring. It is recommended that patients who have pre-existing cardiac abnormalities have electrocardiograms taken prior to and during the course of treatment. Cardiac arrhythmias (primarily

supraventricular) usually respond to conventional therapy but may require discontinuation of PegIntron therapy.

**Psychiatric and Central Nervous System (CNS):** Severe CNS effects, particularly depression, suicidal ideation and attempted suicide have been observed in some patients during PegIntron therapy. Other CNS effects including aggressive behaviour, confusion and alterations of mental status have been observed with alpha interferon. If patients develop psychiatric or CNS problems, including clinical depression, it is recommended that the patient be carefully monitored due to the potential seriousness of these undesirable effects. If symptoms persist or worsen, discontinue PegIntron therapy.

**Liver function:** As with all interferons, discontinue treatment with PegIntron in patients who develop prolongation of coagulation markers which might indicate liver decompensation.

**Fever:** While fever may be associated with the flu-like syndrome reported commonly during interferon therapy, other causes of persistent fever must be ruled out.

**Hydration:** Adequate hydration must be maintained in patients undergoing PegIntron therapy since hypotension related to fluid depletion has been seen in some patients treated with alpha interferons. Fluid replacement may be necessary.

**Pulmonary changes:** Pulmonary infiltrates, pneumonitis, and pneumonia, occasionally resulting in fatality, have been observed rarely in interferon alpha treated patients. Any patient developing fever, cough, dyspnea or other respiratory symptoms must have a chest X-ray taken. If the chest X-ray shows pulmonary infiltrates or there is evidence of pulmonary function impairment, the patient is to be monitored closely, and, if appropriate, discontinue interferon alpha. Prompt discontinuation of interferon alpha administration and treatment with corticosteroids appear to be associated with resolution of pulmonary adverse events.

**Autoimmune disease:** The development of auto-antibodies has been reported during treatment with alpha interferons. Clinical manifestations of autoimmune disease during interferon therapy may occur more frequently in patients predisposed to the development of autoimmune disorders.

**Ocular changes:** Ophthalmologic disorders, including retinal haemorrhages, cotton wool spots, and retinal artery or vein obstruction have been reported in rare instances after treatment with alpha interferons. Any patient complaining of loss of visual acuity or visual field must have an eye examination. Because these ocular events may occur in conjunction with other disease states, a visual exam prior to initiation of PegIntron therapy is recommended in patients with diabetes mellitus or hypertension.

**Thyroid changes:** Infrequently, patients treated for chronic hepatitis C with interferon alpha have developed thyroid abnormalities, either hypothyroidism or hyperthyroidism. Determine thyroid stimulating hormone (TSH) levels if, during the course of therapy, a patient develops symptoms consistent with possible thyroid dysfunction. In the presence of thyroid dysfunction, PegIntron treatment may be continued if TSH levels can be maintained in the normal range by medication.

**Other:** Due to reports of interferon alpha exacerbating pre-existing psoriatic disease, use of PegIntron in patients with psoriasis is recommended only if the potential benefit justifies the potential risk.

**Laboratory tests:** Standard haematologic tests, blood chemistry and a test of thyroid function must be conducted in all patients prior to initiating therapy. Acceptable baseline values that may be considered as a guideline prior to initiation of PegIntron therapy are:

- Platelets  $\geq 100,000/\text{mm}^3$
- Neutrophil count  $\geq 1,500/\text{mm}^3$
- TSH level must be within normal limits

Laboratory evaluations are to be conducted at weeks 2 and 4 of therapy, and periodically thereafter as clinically appropriate.

#### 4.5 Interaction with other medicinal products and other forms of interaction

Results of a single-dose study with PegIntron demonstrated no effect on the activity of cytochrome (CY) P1A2, CYP2C8/9, CYP2D6, and hepatic CYP3A4 or N-acetyl transferase. Caution should be advised in the interpretation of these results as the use of other forms of interferon alpha result in a 50 % reduction in the clearance and thus a doubling of plasma concentrations of theophylline, a substrate of CYP1A2.

No pharmacokinetic interactions were noted between PegIntron and ribavirin in a multiple-dose pharmacokinetic study.

#### 4.6 Pregnancy and lactation

There are no adequate data on the use of interferon alfa-2b in pregnant women. Interferon alfa-2b has been shown to be abortifacient in primates. PegIntron is likely to also cause this effect. PegIntron should not be used during pregnancy (see 5.3).

PegIntron is recommended for use in fertile women only when they are using effective contraception during the treatment period.

**Lactation:** It is not known whether the components of this medicinal product are excreted in human milk. Because of the potential for adverse reactions in nursing infants, nursing must be discontinued prior to initiation of treatment.

#### 4.7 Effects on ability to drive and use machines

Patients who develop fatigue, somnolence or confusion during treatment with PegIntron are cautioned to avoid driving or operating machinery.

#### 4.8 Undesirable effects

The safety of PegIntron is evaluated from data from two clinical trials: one with PegIntron monotherapy, one with PegIntron in combination with ribavirin. In both cases, patients were treated for one year.

**Table 3** describes the regimens and patient exposure for one year of treatment in patients with no previous exposure to interferon (interferon-naïve patients). Because of a significant overlap in the pattern of undesirable effects with PegIntron monotherapy, groups of patients have been brought together in **Table 4** to show the pattern of reported effects for all monotherapy groups.

<b>Table 3</b> Regimens and patient exposure		
<b>Treatment</b>	<b>Regimen</b>	<b>Number of patients treated for one year</b>
PegIntron + ribavirin	PegIntron (1.5 micrograms/kg/week) + ribavirin (> 10.6 mg/kg/day)	188
Interferon alfa-2b + ribavirin	Interferon alfa-2b (3 MIU three times a week) + ribavirin (1,000/1,200 mg/day)	505
PegIntron monotherapy	PegIntron (0.5 microgram/kg/week)	315
	PegIntron (1.0 microgram/kg/week)	297
	PegIntron (1.5 micrograms/kg/week)	304

<b>Table 4</b> Undesirable effects reported in clinical trials (≥ 10 % of patients in PegIntron + ribavirin group)

Undesirable effects reported between 5 and 10 % in the treatment group receiving the recommended dose of PegIntron + ribavirin were increased sweating, chest pain, right upper quadrant (RUQ) pain, paresthesia, hypothyroidism, constipation, dyspepsia, tachycardia, agitation, nervousness, menorrhagia, menstrual disorder, nonproductive cough, rhinitis, taste perversion, blurred vision.

Undesirable effects reported between 2 and 5 % in the treatment group receiving the recommended dose of PegIntron + ribavirin were injection site pain, flushing, hypotension, lacrimal gland disorder, erythema, malaise, hypertension, syncope, confusion, hyperesthesia, hypoesthesia, hypertonia, decreased libido, tremor, vertigo, hyperthyroidism, flatulence, gingival bleeding, glossitis, loose stools, stomatitis, ulcerative stomatitis, hearing impairment/loss, tinnitus, palpitation, thirst, thrombocytopenia, aggressive behaviour, somnolence, herpes simplex, fungal infection, amenorrhoea, prostatitis, otitis media, bronchitis, nasal congestion, respiratory disorder, rhinorrhea, sinusitis,

eczema, abnormal hair texture, photosensitivity reaction, erythematous rash, maculopapular rash, migraine, conjunctivitis, and lymphadenopathy.

Most cases of neutropaenia and thrombocytopaenia were mild (WHO grades 1 or 2). There were some cases of more severe neutropaenia in patients treated with the recommended doses of PegIntron in combination with ribavirin (WHO grade 3: 39 of 186 [21 %]; and WHO grade 4: 13 of 186 [7 %]).

In a clinical trial, approximately 1.2 % of patients treated with PegIntron or interferon alfa-2b in combination with ribavirin reported life-threatening psychiatric events during treatment. These events included suicidal ideation and attempted suicide.

Rarely reported events with interferon alfa-2b include retinal disorders, diabetes, and arrhythmia.

## **4.9 Overdose**

In clinical trials, cases of accidental overdose, at never more than twice the prescribed dose, were reported. There were no serious reactions. Undesirable effects resolved during continued administration of PegIntron.

## **5. PHARMACOLOGICAL PROPERTIES**

### **5.1 Pharmacodynamic properties**

Pharmacotherapeutic group: Immunostimulants, Cytokines and immunomodulators, Interferons, Peginterferon alfa-2b, ATC code: L03A B10.

PegIntron is a covalent conjugate of recombinant interferon alfa-2b with monomethoxy polyethylene glycol. The average molecular weight of the molecule is approximately 31,300 daltons.

#### **Interferon alfa-2b**

Recombinant interferon alfa-2b is obtained from a clone of *E. coli*, which harbours a genetically engineered plasmid hybrid encompassing an interferon alfa-2b gene from human leukocytes.

*In vitro* and *in vivo* studies suggest that the biological activity of PegIntron is derived from its interferon alfa-2b moiety.

Interferons exert their cellular activities by binding to specific membrane receptors on the cell surface. Studies with other interferons have demonstrated species specificity. However, certain monkey species, e.g., Rhesus monkeys, are susceptible to pharmacodynamic stimulation upon exposure to human type 1 interferons.

Once bound to the cell membrane, interferon initiates a complex sequence of intracellular events that include the induction of certain enzymes. It is thought that this process, at least in part, is responsible for the various cellular responses to interferon, including inhibition of virus replication in virus-infected cells, suppression of cell proliferation and such immunomodulating activities as enhancement of the phagocytic activity of macrophages and augmentation of the specific cytotoxicity of lymphocytes for target cells. Any or all of these activities may contribute to interferon's therapeutic effects.

Recombinant interferon alfa-2b also inhibits viral replication *in vitro* and *in vivo*. Although the exact antiviral mode of action of recombinant interferon alfa-2b is unknown, it appears to alter the host cell metabolism. This action inhibits viral replication or if replication occurs, the progeny virions are unable to leave the cell.

#### **PegIntron**

PegIntron pharmacodynamics were assessed in a rising single-dose trial in healthy subjects by examining changes in oral temperature, concentrations of effector proteins such as serum neopterin and 2'5'-oligoadenylate synthetase (2'5'-OAS), as well as white cell and neutrophil counts. Subjects treated with PegIntron showed mild dose-related elevations in body temperature. Following single doses of PegIntron between 0.25 and 2.0 micrograms/kg/week, serum neopterin concentration was increased in a dose-related manner. Neutrophil and white cell count reductions at the end of week 4 correlated with the dose of PegIntron.

### **PegIntron clinical trials**

Two pivotal trials have been conducted, one (C/I97-010) with PegIntron monotherapy; the other (C/I98-580) with PegIntron in combination with ribavirin. Eligible patients for these trials had chronic hepatitis C confirmed by a positive HCV-RNA polymerase chain reaction (PCR) assay (> 100 copies/ml), a liver biopsy consistent with a histological diagnosis of chronic hepatitis with no other cause for the chronic hepatitis, and abnormal serum ALT.

In the PegIntron monotherapy trial, a total of 916 naïve chronic hepatitis C patients were treated with PegIntron (0.5, 1.0 or 1.5 micrograms/kg/week) for one year with a follow-up period of six months. In addition, 303 patients received interferon alfa-2b (3 million International Units [MIU] three times a week [TIW]) as a comparator. This study showed that PegIntron was superior to interferon alfa-2b (**Table 5**).

In the PegIntron combination trial, 1,530 naïve patients were treated for one year with one of the following combination regimens:

- PegIntron (1.5 micrograms/kg/week) + ribavirin (800 mg/day), (n = 511).
- PegIntron (1.5 micrograms/kg/week for one month followed by 0.5 microgram/kg/week for 11 months) + ribavirin (1,000/1,200 mg/day), (n = 514).
- Interferon alfa-2b (3 MIU TIW) + ribavirin (1,000/1,200 mg/day) (n = 505).

In this trial, the combination of PegIntron (1.5 micrograms/kg/week) and ribavirin was significantly more effective than the combination of interferon alfa-2b and ribavirin (**Table 5**), particularly in patients infected with Genotype 1 (**Table 6**). Sustained response was assessed by the response rate six months after the cessation of treatment.

HCV genotype and baseline virus load are prognostic factors which are known to affect response rates. However, response rates in this trial were shown to be dependent also on the dose of ribavirin administered in combination with PegIntron or interferon alfa-2b. In those patients that received > 10.6 mg/kg ribavirin (800 mg dose in typical 75 kg patient), regardless of genotype or viral load, response rates were significantly higher than in those patients that received ≤ 10.6 mg/kg ribavirin (**Table 6**), while response rates in patients that received > 13.2 mg/kg ribavirin were even higher.

Response rates in this trial were increased if patients were able to maintain compliance. Regardless of genotype, patients who received the recommended combination regimen and received ≥ 80 % of their treatment with PegIntron and ribavirin had a higher sustained response 6 months after 1 year of treatment than those who took < 80 % of their treatment (72 % vs. 46 %).

I/R Interferon alfa-2b (3 MIU) + ribavirin (1,000/1,200 mg)

In the PegIntron monotherapy study, the Quality of Life was generally less affected by 0.5 microgram/kg of PegIntron than by either 1.0 microgram/kg of PegIntron once weekly or 3 MIU of interferon alfa-2b TIW.

## 5.2 Pharmacokinetic properties

PegIntron is a well characterized polyethylene glycol-modified (“pegylated”) derivative of interferon alfa-2b and is predominantly composed of monopegylated species. The plasma half-life of PegIntron is prolonged compared with non-pegylated interferon alfa-2b. PegIntron has a potential to depegylate to free interferon alfa-2b. The biologic activity of the pegylated isomers is qualitatively similar, but weaker than free interferon alfa-2b.

Following subcutaneous administration, maximal serum concentrations occur between 15-44 hours post-dose, and are sustained for up to 48-72 hours post-dose.

PegIntron  $C_{max}$  and AUC measurements increase in a dose-related manner. Mean apparent volume of distribution is 0.99 l/kg.

Upon multiple dosing, there is an accumulation of immunoreactive interferons. There is, however, only a modest increase in biologic activity as measured by a bioassay.

Mean (SD) PegIntron elimination half-life is approximately 40 hours (13.3 hours), with apparent clearance of 22.0 ml/hr·kg. The mechanisms involved in clearance of interferons in man have not yet been fully elucidated. However, renal elimination may account for a minority (approximately 30 %) of PegIntron apparent clearance.

**Renal function:** Renal clearance appears to account for 30 % of total clearance of PegIntron. In a single dose study (1.0 microgram/kg) in patients with impaired renal function,  $C_{max}$ , AUC, and half-life increased in relation to the degree of renal impairment.

Based on these data, no dose modification is recommended based on creatinine clearance. However, because of marked intra-subject variability in interferon pharmacokinetics, it is recommended that patients be monitored closely during treatment with PegIntron (see 4.2). Patients with severe renal dysfunction or creatinine clearance < 50 ml/min must not be treated with PegIntron.

**Hepatic function:** The pharmacokinetics of PegIntron have not been evaluated in patients with severe hepatic dysfunction.

**Elderly patients ≥ 65 years of age:** The pharmacokinetics of PegIntron following a single subcutaneous dose of 1.0 microgram/kg were not affected by age. The data suggest that no alteration in PegIntron dosage is necessary based on advancing age.

**Patients under the age of 18 years:** Specific pharmacokinetic evaluations have not been performed on these patients. PegIntron is indicated for the treatment of chronic hepatitis C only in patients 18 years of age or older.

**Interferon neutralising factors:** Interferon neutralising factor assays were performed on serum samples of patients who received PegIntron in the clinical trial. Interferon neutralising factors are antibodies which neutralise the antiviral activity of interferon. The clinical incidence of neutralising factors in patients who received PegIntron 0.5 micrograms/kg is 1.1 %.

### 5.3 Preclinical safety data

**PegIntron:** Adverse events not observed in clinical trials were not seen in toxicity studies in monkeys. These studies were limited to four weeks due to the appearance of anti-interferon antibodies in most monkeys.

Reproduction studies of PegIntron have not been performed. Interferon alfa-2b has been shown to be an abortifacient in primates. PegIntron is likely to also cause this effect. Effects on fertility have not been determined. PegIntron showed no genotoxic potential. (see 4.6 for relevant human data. It is not known whether the components of this medicinal product are excreted in human milk. Therefore, nursing must be discontinued prior to the initiation of therapy.)

The relative non-toxicity of monomethoxy-polyethylene glycol (mPEG), which is liberated from PegIntron by metabolism *in vivo* has been demonstrated in preclinical acute and subchronic toxicity studies in rodents and monkeys, standard embryo-foetal development studies and in *in vitro* mutagenicity assays.

**PegIntron plus ribavirin:** When used in combination with ribavirin, PegIntron did not cause any effects not previously seen with either active substance alone. The major treatment-related change was a reversible, mild to moderate anaemia, the severity of which was greater than that produced by either active substance alone.

## **6. PHARMACEUTICAL PARTICULARS**

### **6.1 List of excipients**

Powder for solution for injection:

Disodium phosphate, anhydrous,  
Sodium dihydrogen phosphate dihydrate,  
Sucrose,  
Polysorbate 80.

Solvent for parenteral use:

Water for injections.

Deliverable volume from pen = 0.5 ml. An overfill is also included for proper dispensing from the pen delivery system.

### **6.2 Incompatibilities**

This medicinal product should only be reconstituted with the solvent provided and must not be mixed with other medicinal products (see also 6.6).

### **6.3 Shelf life**

1 year

After reconstitution:

- Chemical and physical in-use stability has been demonstrated for 24 hours at 2°C - 8°C.
- From a microbiological point of view, the product is to be used immediately. If not used immediately, in-use storage times and conditions prior to use are the responsibility of the user and would normally not be longer than 24 hours at 2°C - 8°C.

### **6.4 Special precautions for storage**

Store at 2°C - 8°C (in a refrigerator)

### **6.5 Nature and contents of container**

The powder and solvent are both contained in a two-chamber cartridge, Type I flint glass, separated by a bromobutyl rubber plunger. The cartridge is sealed at one end with a polypropylene cap containing a bromobutyl rubber liner and at the other end by a bromobutyl rubber plunger.

PegIntron 50 micrograms is supplied as:

- 1 pen containing powder and solvent for solution for injection, 1 injection needle and 2 cleansing swabs;
- 4 pens containing powder and solvent for solution for injection, 4 injection needles and 8 cleansing swabs;
- 6 pens containing powder and solvent for solution for injection, 6 injection needles and 12 cleansing swabs;
- 12 pens containing powder and solvent for solution for injection, 12 injection needles and 24 cleansing swabs.

Not all pack sizes may be marketed.

## **6.6 Instructions for use and handling and disposal**

PegIntron pre-filled pen contains a powder of peginterferon alfa-2b and a solvent for solution at a strength of 50 micrograms for single use. Each pen is reconstituted with the solvent provided in the two-chamber cartridge (water for injections) for administration of up to 0.5 ml of solution. A small volume is lost during preparation of PegIntron for injection when the dose is measured and injected. Therefore, each pen contains an excess amount of solvent and PegIntron powder to ensure delivery of the labelled dose in 0.5 ml of PegIntron, solution for injection. The reconstituted solution has a concentration of 50 micrograms in 0.5 ml.

PegIntron is injected subcutaneously after reconstituting the powder as instructed, attaching an injection needle and setting the prescribed dose. A complete and illustrated set of instructions is provided in the Annex to the Package Leaflet.

Remove PegIntron pre-filled pen from the refrigerator before administration to allow the solvent to reach room temperature (not more than 25°C).

As for all parenteral medicinal products, inspect visually the reconstituted solution prior to administration. Do not use if discolouration is present. After administering the dose, discard the PegIntron pre-filled pen and any unused solution contained in it.

## **7. MARKETING AUTHORISATION HOLDER**

SP Europe  
73, rue de Stalle  
B-1180 Bruxelles  
Belgium

## **8. MARKETING AUTHORISATION NUMBER(S)**

EU/

## **9. DATE OF FIRST AUTHORISATION/RENEWAL OF THE AUTHORISATION**

## **10. DATE OF REVISION OF THE TEXT**

## 1. NAME OF THE MEDICINAL PRODUCT

PegIntron 80 micrograms, powder and solvent for solution for injection in pre-filled pen

## 2. QUALITATIVE AND QUANTITATIVE COMPOSITION

Each pre-filled pen of PegIntron 80 micrograms contains a sufficient amount of peginterferon alfa-2b (conjugation of recombinant interferon alfa-2b with monomethoxy polyethylene glycol) in a powder for solution for injection, and the corresponding amount of solvent, to provide 80 micrograms in 0.5 ml of peginterferon alfa-2b when reconstituted as recommended.

For excipients, see 6.1.

## 3. PHARMACEUTICAL FORM

Powder and solvent for solution for injection

## 4. CLINICAL PARTICULARS

### 4.1 Therapeutic indications

PegIntron is indicated for the treatment of adult patients with histologically proven chronic hepatitis C who have elevated transaminases without liver decompensation and who are positive for serum HCV-RNA or anti-HCV.

The best way to use PegIntron in this indication is in combination with ribavirin.

This combination is indicated in naïve patients as well as in patients who have previously responded (with normalisation of ALT at the end of treatment) to interferon alpha monotherapy but who have subsequently relapsed.

Interferon monotherapy, including PegIntron, is indicated mainly in case of intolerance or contraindication to ribavirin.

Please refer also to the ribavirin Summary of Product Characteristics (SPC) when PegIntron is to be used in combination with ribavirin.

### 4.2 Posology and method of administration

Treatment should be initiated and monitored only by a physician experienced in the management of patients with hepatitis C.

#### Dose to be administered

PegIntron should be administered as a once weekly subcutaneous injection. The dose administered depends on whether it is used in combination with ribavirin or as monotherapy.

#### Combination therapy

PegIntron 1.5 micrograms/kg/week in combination with ribavirin capsules.

The dose of ribavirin to be used in combination with PegIntron is based on patient body weight (**Table 1**). Ribavirin capsules are to be administered orally each day in two divided doses with food (morning and evening).

<b>Table 1</b> Ribavirin dose based on body weight
--

Patient weight (kg)	Daily ribavirin dose	Number of 200 mg capsules
< 65	800 mg	4 <sup>a</sup>
65 – 85	1,000 mg	5 <sup>b</sup>
> 85	1,200 mg	6 <sup>c</sup>

a: 2 morning, 2 evening

b: 2 morning, 3 evening

c: 3 morning, 3 evening

**Duration of treatment:** Based on the results of clinical trials, it is recommended that patients be treated for at least six months. During those clinical trials in which patients were treated for one year, patients who failed to show a virological response after six months of treatment (HCV-RNA below lower limit of detection) were unlikely to become sustained virological responders (HCV-RNA below lower limit of detection six months after withdrawal of treatment).

- **Genotype 1:** Treatment should be continued for another six month period (i.e., a total of one year) in patients who exhibit negative HCV-RNA after six months of treatment.
- **Genotypes Non-1:** The decision to extend therapy to one year in patients with negative HCV-RNA after six months of treatment should be based on other prognostic factors (e.g., age > 40 years, male gender, bridging fibrosis).

### PegIntron monotherapy

As monotherapy the PegIntron regimen is 0.5 or 1.0 microgram/kg/week.

**Duration of treatment:** It is recommended that patients be treated initially for six months. In patients showing loss of HCV-RNA at six months, treatment is to be continued for an additional six months, i.e., one year of treatment.

### Dose modification for all patients

If severe adverse reactions or laboratory abnormalities develop during treatment with PegIntron monotherapy or PegIntron in combination with ribavirin, modify the dosages of each product if appropriate, until the adverse reactions abate. Guidelines were developed in clinical trials for dose modification (see Dosage modification guidelines, **Table 2a** for PegIntron monotherapy and **Table 2b** for PegIntron combination therapy with ribavirin).

<b>Table 2a</b> Dose modification guidelines for PegIntron monotherapy		
Laboratory values	Reduce PegIntron to one-half dose if:	Discontinue PegIntron if:
Neutrophils	< 0.75 x 10 <sup>9</sup> /l	< 0.5 x 10 <sup>9</sup> /l
Platelets	< 50 x 10 <sup>9</sup> /l	< 25 x 10 <sup>9</sup> /l

<b>Table 2b</b> Dose modification guidelines for combination therapy (with ribavirin)			
Laboratory values	Reduce only ribavirin dose to 600 mg/day* if:	Reduce only PegIntron dose to one-half dose if:	Discontinue combination therapy if:
Haemoglobin	< 10 g/dl	-	< 8.5 g/dl
Haemoglobin in: Patients with history of stable cardiac disease	≥ 2 g/dl decrease in haemoglobin during any four week period during treatment (permanent dose reduction)		< 12 g/dl after four weeks of dose reduction
White blood cells	-	< 1.5 x 10 <sup>9</sup> /l	< 1.0 x 10 <sup>9</sup> /l
Neutrophils	-	< 0.75 x 10 <sup>9</sup> /l	< 0.5 x 10 <sup>9</sup> /l
Platelets	-	< 50 x 10 <sup>9</sup> /l	< 25 x 10 <sup>9</sup> /l

Bilirubin – direct	-	-	2.5 x ULN**
Bilirubin – indirect	> 5 mg/dl	-	> 4 mg/dl (for > 4 weeks)
Creatinine	-	-	> 2.0 mg/dl
ALT/AST	-	-	2 x baseline and > 10 x ULN**

\* Patients whose dose of ribavirin is reduced to 600 mg daily receive one 200 mg capsule in the morning and two 200 mg capsules in the evening.

\*\* Upper limit of normal

### Special populations

**Use in renal impairment:** The clearance of PegIntron is reduced in patients with significant renal impairment. Patients with creatinine clearance  $\leq 50$  ml/minute must not be treated with PegIntron (see 5.2). It is recommended that patients with moderate renal impairment be closely monitored and that their weekly dose of PegIntron be reduced if medically appropriate.

**Use in hepatic impairment:** The safety and efficacy of PegIntron therapy has not been evaluated in patients with severe hepatic dysfunction, therefore PegIntron must not be used for these patients.

**Use in the elderly ( $\geq 65$  years of age):** There are no apparent age-related effects on the pharmacokinetics of PegIntron. Data from elderly patients treated with a single dose of PegIntron suggest no alteration in PegIntron dose is necessary based on age (see 5.2).

**Use in patients under the age of 18 years:** PegIntron is not recommended for use in children or adolescents under the age of 18, as there is no experience in this group.

### 4.3 Contraindications

- Hypersensitivity to the active substance or to any interferon or to any of the excipients;
- Pregnant women;
- Women who are breast-feeding;
- Existence of or a history of severe psychiatric condition, particularly severe depression, suicidal ideation or suicide attempt;
- A history of severe pre-existing cardiac disease, including unstable or uncontrolled cardiac disease in the previous six months (see 4.4);
- Severe, debilitating medical conditions, including patients with chronic renal failure or creatinine clearance  $< 50$  ml/minute;
- Autoimmune hepatitis or a history of autoimmune disease;
- Severe hepatic dysfunction or decompensated cirrhosis of the liver;
- Pre-existing thyroid disease unless it can be controlled with conventional treatment;
- Epilepsy and/or compromised central nervous system (CNS) function.

### 4.4 Special warnings and special precautions for use

There is no experience with PegIntron in combination with ribavirin in patients who have relapsed after interferon alpha + ribavirin therapy.

**Acute hypersensitivity:** Acute hypersensitivity reactions have been observed rarely during interferon alfa-2b therapy. If such a reaction develops during treatment with PegIntron, discontinue treatment and institute appropriate medical therapy immediately. Transient rashes do not necessitate interruption of treatment.

**Cardiovascular system:** As with interferon alfa-2b, patients with a history of congestive heart failure, myocardial infarction and/or previous or current arrhythmic disorders, receiving PegIntron therapy require close monitoring. It is recommended that patients who have pre-existing cardiac abnormalities have electrocardiograms taken prior to and during the course of treatment. Cardiac arrhythmias (primarily

supraventricular) usually respond to conventional therapy but may require discontinuation of PegIntron therapy.

**Psychiatric and Central Nervous System (CNS):** Severe CNS effects, particularly depression, suicidal ideation and attempted suicide have been observed in some patients during PegIntron therapy. Other CNS effects including aggressive behaviour, confusion and alterations of mental status have been observed with alpha interferon. If patients develop psychiatric or CNS problems, including clinical depression, it is recommended that the patient be carefully monitored due to the potential seriousness of these undesirable effects. If symptoms persist or worsen, discontinue PegIntron therapy.

**Liver function:** As with all interferons, discontinue treatment with PegIntron in patients who develop prolongation of coagulation markers which might indicate liver decompensation.

**Fever:** While fever may be associated with the flu-like syndrome reported commonly during interferon therapy, other causes of persistent fever must be ruled out.

**Hydration:** Adequate hydration must be maintained in patients undergoing PegIntron therapy since hypotension related to fluid depletion has been seen in some patients treated with alpha interferons. Fluid replacement may be necessary.

**Pulmonary changes:** Pulmonary infiltrates, pneumonitis, and pneumonia, occasionally resulting in fatality, have been observed rarely in interferon alpha treated patients. Any patient developing fever, cough, dyspnea or other respiratory symptoms must have a chest X-ray taken. If the chest X-ray shows pulmonary infiltrates or there is evidence of pulmonary function impairment, the patient is to be monitored closely, and, if appropriate, discontinue interferon alpha. Prompt discontinuation of interferon alpha administration and treatment with corticosteroids appear to be associated with resolution of pulmonary adverse events.

**Autoimmune disease:** The development of auto-antibodies has been reported during treatment with alpha interferons. Clinical manifestations of autoimmune disease during interferon therapy may occur more frequently in patients predisposed to the development of autoimmune disorders.

**Ocular changes:** Ophthalmologic disorders, including retinal haemorrhages, cotton wool spots, and retinal artery or vein obstruction have been reported in rare instances after treatment with alpha interferons. Any patient complaining of loss of visual acuity or visual field must have an eye examination. Because these ocular events may occur in conjunction with other disease states, a visual exam prior to initiation of PegIntron therapy is recommended in patients with diabetes mellitus or hypertension.

**Thyroid changes:** Infrequently, patients treated for chronic hepatitis C with interferon alpha have developed thyroid abnormalities, either hypothyroidism or hyperthyroidism. Determine thyroid stimulating hormone (TSH) levels if, during the course of therapy, a patient develops symptoms consistent with possible thyroid dysfunction. In the presence of thyroid dysfunction, PegIntron treatment may be continued if TSH levels can be maintained in the normal range by medication.

**Other:** Due to reports of interferon alpha exacerbating pre-existing psoriatic disease, use of PegIntron in patients with psoriasis is recommended only if the potential benefit justifies the potential risk.

**Laboratory tests:** Standard haematologic tests, blood chemistry and a test of thyroid function must be conducted in all patients prior to initiating therapy. Acceptable baseline values that may be considered as a guideline prior to initiation of PegIntron therapy are:

- Platelets  $\geq 100,000/\text{mm}^3$
- Neutrophil count  $\geq 1,500/\text{mm}^3$
- TSH level must be within normal limits

Laboratory evaluations are to be conducted at weeks 2 and 4 of therapy, and periodically thereafter as clinically appropriate.

#### 4.5 Interaction with other medicinal products and other forms of interaction

Results of a single-dose study with PegIntron demonstrated no effect on the activity of cytochrome (CY) P1A2, CYP2C8/9, CYP2D6, and hepatic CYP3A4 or N-acetyl transferase. Caution should be advised in the interpretation of these results as the use of other forms of interferon alpha result in a 50 % reduction in the clearance and thus a doubling of plasma concentrations of theophylline, a substrate of CYP1A2.

No pharmacokinetic interactions were noted between PegIntron and ribavirin in a multiple-dose pharmacokinetic study.

#### 4.6 Pregnancy and lactation

There are no adequate data on the use of interferon alfa-2b in pregnant women. Interferon alfa-2b has been shown to be abortifacient in primates. PegIntron is likely to also cause this effect. PegIntron should not be used during pregnancy (see 5.3).

PegIntron is recommended for use in fertile women only when they are using effective contraception during the treatment period.

**Lactation:** It is not known whether the components of this medicinal product are excreted in human milk. Because of the potential for adverse reactions in nursing infants, nursing must be discontinued prior to initiation of treatment.

#### 4.7 Effects on ability to drive and use machines

Patients who develop fatigue, somnolence or confusion during treatment with PegIntron are cautioned to avoid driving or operating machinery.

#### 4.8 Undesirable effects

The safety of PegIntron is evaluated from data from two clinical trials: one with PegIntron monotherapy, one with PegIntron in combination with ribavirin. In both cases, patients were treated for one year.

**Table 3** describes the regimens and patient exposure for one year of treatment in patients with no previous exposure to interferon (interferon-naïve patients). Because of a significant overlap in the pattern of undesirable effects with PegIntron monotherapy, groups of patients have been brought together in **Table 4** to show the pattern of reported effects for all monotherapy groups.

<b>Table 3</b> Regimens and patient exposure		
<b>Treatment</b>	<b>Regimen</b>	<b>Number of patients treated for one year</b>
PegIntron + ribavirin	PegIntron (1.5 micrograms/kg/week) + ribavirin (> 10.6 mg/kg/day)	188
Interferon alfa-2b + ribavirin	Interferon alfa-2b (3 MIU three times a week) + ribavirin (1,000/1,200 mg/day)	505
PegIntron monotherapy	PegIntron (0.5 microgram/kg/week)	315
	PegIntron (1.0 microgram/kg/week)	297
	PegIntron (1.5 micrograms/kg/week)	304

<b>Table 4</b> Undesirable effects reported in clinical trials (≥ 10 % of patients in PegIntron + ribavirin group)				
	<b>PegIntron +</b>	<b>Interferon alfa-</b>	<b>PegIntron</b>	

	<b>ribavirin</b>	<b>2b + ribavirin</b>	<b>monotherapy</b>
<b>Application site disorder</b>

<b>Other</b>			
Dizziness	17 %	16 %	7-12 %
Infection viral	10 %	5 %	4-5 %
Mouth dry	10 %	8 %	4-8 %

Undesirable effects reported between 5 and 10 % in the treatment group receiving the recommended dose of PegIntron + ribavirin were increased sweating, chest pain, right upper quadrant (RUQ) pain, paresthaesia, hypothyroidism, constipation, dyspepsia, tachycardia, agitation, nervousness, menorrhagia, menstrual disorder, nonproductive cough, rhinitis, taste perversion, blurred vision.

Undesirable effects reported between 2 and 5 % in the treatment group receiving the recommended dose of PegIntron + ribavirin were injection site pain, flushing, hypotension, lacrimal gland disorder, erythema, malaise, hypertension, syncope, confusion, hyperesthesia, hypoesthesia, hypertonia, decreased libido, tremor, vertigo, hyperthyroidism, flatulence, gingival bleeding, glossitis, loose stools, stomatitis, ulcerative stomatitis, hearing impairment/loss, tinnitus, palpitation, thirst, thrombocytopenia, aggressive behaviour, somnolence, herpes simplex, fungal infection, amenorrhoea, prostatitis, otitis media, bronchitis, nasal congestion, respiratory disorder, rhinorrhea, sinusitis,

eczema, abnormal hair texture, photosensitivity reaction, erythematous rash, maculopapular rash, migraine, conjunctivitis, and lymphadenopathy.

Most cases of neutropaenia and thrombocytopaenia were mild (WHO grades 1 or 2). There were some cases of more severe neutropaenia in patients treated with the recommended doses of PegIntron in combination with ribavirin (WHO grade 3: 39 of 186 [21 %]; and WHO grade 4: 13 of 186 [7 %]).

In a clinical trial, approximately 1.2 % of patients treated with PegIntron or interferon alfa-2b in combination with ribavirin reported life-threatening psychiatric events during treatment. These events included suicidal ideation and attempted suicide.

Rarely reported events with interferon alfa-2b include retinal disorders, diabetes, and arrhythmia.

## **4.9 Overdose**

In clinical trials, cases of accidental overdose, at never more than twice the prescribed dose, were reported. There were no serious reactions. Undesirable effects resolved during continued administration of PegIntron.

## **5. PHARMACOLOGICAL PROPERTIES**

### **5.1 Pharmacodynamic properties**

Pharmacotherapeutic group: Immunostimulants, Cytokines and immunomodulators, Interferons, Peginterferon alfa-2b, ATC code: L03A B10.

PegIntron is a covalent conjugate of recombinant interferon alfa-2b with monomethoxy polyethylene glycol. The average molecular weight of the molecule is approximately 31,300 daltons.

#### **Interferon alfa-2b**

Recombinant interferon alfa-2b is obtained from a clone of *E. coli*, which harbours a genetically engineered plasmid hybrid encompassing an interferon alfa-2b gene from human leukocytes.

*In vitro* and *in vivo* studies suggest that the biological activity of PegIntron is derived from its interferon alfa-2b moiety.

Interferons exert their cellular activities by binding to specific membrane receptors on the cell surface. Studies with other interferons have demonstrated species specificity. However, certain monkey species, e.g., Rhesus monkeys, are susceptible to pharmacodynamic stimulation upon exposure to human type 1 interferons.

Once bound to the cell membrane, interferon initiates a complex sequence of intracellular events that include the induction of certain enzymes. It is thought that this process, at least in part, is responsible for the various cellular responses to interferon, including inhibition of virus replication in virus-infected cells, suppression of cell proliferation and such immunomodulating activities as enhancement of the phagocytic activity of macrophages and augmentation of the specific cytotoxicity of lymphocytes for target cells. Any or all of these activities may contribute to interferon's therapeutic effects.

Recombinant interferon alfa-2b also inhibits viral replication *in vitro* and *in vivo*. Although the exact antiviral mode of action of recombinant interferon alfa-2b is unknown, it appears to alter the host cell metabolism. This action inhibits viral replication or if replication occurs, the progeny virions are unable to leave the cell.

#### **PegIntron**

PegIntron pharmacodynamics were assessed in a rising single-dose trial in healthy subjects by examining changes in oral temperature, concentrations of effector proteins such as serum neopterin and 2'5'-oligoadenylate synthetase (2'5'-OAS), as well as white cell and neutrophil counts. Subjects treated with PegIntron showed mild dose-related elevations in body temperature. Following single doses of PegIntron between 0.25 and 2.0 micrograms/kg/week, serum neopterin concentration was increased in a dose-related manner. Neutrophil and white cell count reductions at the end of week 4 correlated with the dose of PegIntron.

### **PegIntron clinical trials**

Two pivotal trials have been conducted, one (C/I97-010) with PegIntron monotherapy; the other (C/I98-580) with PegIntron in combination with ribavirin. Eligible patients for these trials had chronic hepatitis C confirmed by a positive HCV-RNA polymerase chain reaction (PCR) assay (> 100 copies/ml), a liver biopsy consistent with a histological diagnosis of chronic hepatitis with no other cause for the chronic hepatitis, and abnormal serum ALT.

In the PegIntron monotherapy trial, a total of 916 naïve chronic hepatitis C patients were treated with PegIntron (0.5, 1.0 or 1.5 micrograms/kg/week) for one year with a follow-up period of six months. In addition, 303 patients received interferon alfa-2b (3 million International Units [MIU] three times a week [TIW]) as a comparator. This study showed that PegIntron was superior to interferon alfa-2b (**Table 5**).

In the PegIntron combination trial, 1,530 naïve patients were treated for one year with one of the following combination regimens:

- PegIntron (1.5 micrograms/kg/week) + ribavirin (800 mg/day), (n = 511).
- PegIntron (1.5 micrograms/kg/week for one month followed by 0.5 microgram/kg/week for 11 months) + ribavirin (1,000/1,200 mg/day), (n = 514).
- Interferon alfa-2b (3 MIU TIW) + ribavirin (1,000/1,200 mg/day) (n = 505).

In this trial, the combination of PegIntron (1.5 micrograms/kg/week) and ribavirin was significantly more effective than the combination of interferon alfa-2b and ribavirin (**Table 5**), particularly in patients infected with Genotype 1 (**Table 6**). Sustained response was assessed by the response rate six months after the cessation of treatment.

HCV genotype and baseline virus load are prognostic factors which are known to affect response rates. However, response rates in this trial were shown to be dependent also on the dose of ribavirin administered in combination with PegIntron or interferon alfa-2b. In those patients that received > 10.6 mg/kg ribavirin (800 mg dose in typical 75 kg patient), regardless of genotype or viral load, response rates were significantly higher than in those patients that received ≤ 10.6 mg/kg ribavirin (**Table 6**), while response rates in patients that received > 13.2 mg/kg ribavirin were even higher.

Response rates in this trial were increased if patients were able to maintain compliance. Regardless of genotype, patients who received the recommended combination regimen and received ≥ 80 % of their treatment with PegIntron and ribavirin had a higher sustained response 6 months after 1 year of treatment than those who took < 80 % of their treatment (72 % vs. 46 %).

	> 10.6	88 %	80 %	80 %

P 1.5/R PegIntron (1.5 micrograms/kg) + ribavirin (800 mg)

P 0.5/R PegIntron (1.5 to 0.5 microgram/kg) + ribavirin (1,000/1,200 mg)

I/R Interferon alfa-2b (3 MIU) + ribavirin (1,000/1,200 mg)

In the PegIntron monotherapy study, the Quality of Life was generally less affected by 0.5 microgram/kg of PegIntron than by either 1.0 microgram/kg of PegIntron once weekly or 3 MIU of interferon alfa-2b TIW.

## 5.2 Pharmacokinetic properties

PegIntron is a well characterized polyethylene glycol-modified (“pegylated”) derivative of interferon alfa-2b and is predominantly composed of monopegylated species. The plasma half-life of PegIntron is prolonged compared with non-pegylated interferon alfa-2b. PegIntron has a potential to depegylate to free interferon alfa-2b. The biologic activity of the pegylated isomers is qualitatively similar, but weaker than free interferon alfa-2b.

Following subcutaneous administration, maximal serum concentrations occur between 15-44 hours post-dose, and are sustained for up to 48-72 hours post-dose.

PegIntron  $C_{max}$  and AUC measurements increase in a dose-related manner. Mean apparent volume of distribution is 0.99 l/kg.

Upon multiple dosing, there is an accumulation of immunoreactive interferons. There is, however, only a modest increase in biologic activity as measured by a bioassay.

Mean (SD) PegIntron elimination half-life is approximately 40 hours (13.3 hours), with apparent clearance of 22.0 ml/hr·kg. The mechanisms involved in clearance of interferons in man have not yet been fully elucidated. However, renal elimination may account for a minority (approximately 30 %) of PegIntron apparent clearance.

**Renal function:** Renal clearance appears to account for 30 % of total clearance of PegIntron. In a single dose study (1.0 microgram/kg) in patients with impaired renal function,  $C_{max}$ , AUC, and half-life increased in relation to the degree of renal impairment.

Based on these data, no dose modification is recommended based on creatinine clearance. However, because of marked intra-subject variability in interferon pharmacokinetics, it is recommended that patients be monitored closely during treatment with PegIntron (see 4.2). Patients with severe renal dysfunction or creatinine clearance < 50 ml/min must not be treated with PegIntron.

**Hepatic function:** The pharmacokinetics of PegIntron have not been evaluated in patients with severe hepatic dysfunction.

**Elderly patients ≥ 65 years of age:** The pharmacokinetics of PegIntron following a single subcutaneous dose of 1.0 microgram/kg were not affected by age. The data suggest that no alteration in PegIntron dosage is necessary based on advancing age.

**Patients under the age of 18 years:** Specific pharmacokinetic evaluations have not been performed on these patients. PegIntron is indicated for the treatment of chronic hepatitis C only in patients 18 years of age or older.

**Interferon neutralising factors:** Interferon neutralising factor assays were performed on serum samples of patients who received PegIntron in the clinical trial. Interferon neutralising factors are antibodies which neutralise the antiviral activity of interferon. The clinical incidence of neutralising factors in patients who received PegIntron 0.5 micrograms/kg is 1.1 %.

### 5.3 Preclinical safety data

**PegIntron:** Adverse events not observed in clinical trials were not seen in toxicity studies in monkeys. These studies were limited to four weeks due to the appearance of anti-interferon antibodies in most monkeys.

Reproduction studies of PegIntron have not been performed. Interferon alfa-2b has been shown to be an abortifacient in primates. PegIntron is likely to also cause this effect. Effects on fertility have not been determined. PegIntron showed no genotoxic potential. (see 4.6 for relevant human data. It is not known whether the components of this medicinal product are excreted in human milk. Therefore, nursing must be discontinued prior to the initiation of therapy.)

The relative non-toxicity of monomethoxy-polyethylene glycol (mPEG), which is liberated from PegIntron by metabolism *in vivo* has been demonstrated in preclinical acute and subchronic toxicity studies in rodents and monkeys, standard embryo-foetal development studies and in *in vitro* mutagenicity assays.

**PegIntron plus ribavirin:** When used in combination with ribavirin, PegIntron did not cause any effects not previously seen with either active substance alone. The major treatment-related change was a reversible, mild to moderate anaemia, the severity of which was greater than that produced by either active substance alone.

## **6. PHARMACEUTICAL PARTICULARS**

### **6.1 List of excipients**

Powder for solution for injection:

Disodium phosphate, anhydrous,  
Sodium dihydrogen phosphate dihydrate,  
Sucrose,  
Polysorbate 80.

Solvent for parenteral use:

Water for injections.

Deliverable volume from pen = 0.5 ml. An overfill is also included for proper dispensing from the pen delivery system.

### **6.2 Incompatibilities**

This medicinal product should only be reconstituted with the solvent provided and must not be mixed with other medicinal products (see also 6.6).

### **6.3 Shelf life**

1 year

After reconstitution:

- Chemical and physical in-use stability has been demonstrated for 24 hours at 2°C - 8°C.
- From a microbiological point of view, the product is to be used immediately. If not used immediately, in-use storage times and conditions prior to use are the responsibility of the user and would normally not be longer than 24 hours at 2°C - 8°C.

### **6.4 Special precautions for storage**

Store at 2°C - 8°C (in a refrigerator)

### **6.5 Nature and contents of container**

The powder and solvent are both contained in a two-chamber cartridge, Type I flint glass, separated by a bromobutyl rubber plunger. The cartridge is sealed at one end with a polypropylene cap containing a bromobutyl rubber liner and at the other end by a bromobutyl rubber plunger.

PegIntron 80 micrograms is supplied as:

- 1 pen containing powder and solvent for solution for injection, 1 injection needle and 2 cleansing swabs;
- 4 pens containing powder and solvent for solution for injection, 4 injection needles and 8 cleansing swabs;
- 6 pens containing powder and solvent for solution for injection, 6 injection needles and 12 cleansing swabs;
- 12 pens containing powder and solvent for solution for injection, 12 injection needles and 24 cleansing swabs.

Not all pack sizes may be marketed.

## **6.6 Instructions for use and handling and disposal**

PegIntron pre-filled pen contains a powder of peginterferon alfa-2b and a solvent for solution at a strength of 80 micrograms for single use. Each pen is reconstituted with the solvent provided in the two-chamber cartridge (water for injections) for administration of up to 0.5 ml of solution. A small volume is lost during preparation of PegIntron for injection when the dose is measured and injected. Therefore, each pen contains an excess amount of solvent and PegIntron powder to ensure delivery of the labelled dose in 0.5 ml of PegIntron, solution for injection. The reconstituted solution has a concentration of 80 micrograms in 0.5 ml.

PegIntron is injected subcutaneously after reconstituting the powder as instructed, attaching an injection needle and setting the prescribed dose. A complete and illustrated set of instructions is provided in the Annex to the Package Leaflet.

Remove PegIntron pre-filled pen from the refrigerator before administration to allow the solvent to reach room temperature (not more than 25°C).

As for all parenteral medicinal products, inspect visually the reconstituted solution prior to administration. Do not use if discolouration is present. After administering the dose, discard the PegIntron pre-filled pen and any unused solution contained in it.

## **7. MARKETING AUTHORISATION HOLDER**

SP Europe  
73, rue de Stalle  
B-1180 Bruxelles  
Belgium

## **8. MARKETING AUTHORISATION NUMBER(S)**

EU/

## **9. DATE OF FIRST AUTHORISATION/RENEWAL OF THE AUTHORISATION**

## **10. DATE OF REVISION OF THE TEXT**

## 1. NAME OF THE MEDICINAL PRODUCT

PegIntron 100 micrograms, powder and solvent for solution for injection in pre-filled pen

## 2. QUALITATIVE AND QUANTITATIVE COMPOSITION

Each pre-filled pen of PegIntron 100 micrograms contains a sufficient amount of peginterferon alfa-2b (conjugation of recombinant interferon alfa-2b with monomethoxy polyethylene glycol) in a powder for solution for injection, and the corresponding amount of solvent, to provide 100 micrograms in 0.5 ml of peginterferon alfa-2b when reconstituted as recommended.

For excipients, see 6.1.

## 3. PHARMACEUTICAL FORM

Powder and solvent for solution for injection

## 4. CLINICAL PARTICULARS

### 4.1 Therapeutic indications

PegIntron is indicated for the treatment of adult patients with histologically proven chronic hepatitis C who have elevated transaminases without liver decompensation and who are positive for serum HCV-RNA or anti-HCV.

The best way to use PegIntron in this indication is in combination with ribavirin.

This combination is indicated in naïve patients as well as in patients who have previously responded (with normalisation of ALT at the end of treatment) to interferon alpha monotherapy but who have subsequently relapsed.

Interferon monotherapy, including PegIntron, is indicated mainly in case of intolerance or contraindication to ribavirin.

Please refer also to the ribavirin Summary of Product Characteristics (SPC) when PegIntron is to be used in combination with ribavirin.

### 4.2 Posology and method of administration

Treatment should be initiated and monitored only by a physician experienced in the management of patients with hepatitis C.

#### Dose to be administered

PegIntron should be administered as a once weekly subcutaneous injection. The dose administered depends on whether it is used in combination with ribavirin or as monotherapy.

#### Combination therapy

PegIntron 1.5 micrograms/kg/week in combination with ribavirin capsules.

The dose of ribavirin to be used in combination with PegIntron is based on patient body weight (**Table 1**). Ribavirin capsules are to be administered orally each day in two divided doses with food (morning and evening).

<b>Table 1</b> Ribavirin dose based on body weight
--

Patient weight (kg)	Daily ribavirin dose	Number of 200 mg capsules
< 65	800 mg	4 <sup>a</sup>
65 – 85	1,000 mg	5 <sup>b</sup>
> 85	1,200 mg	6 <sup>c</sup>

a: 2 morning, 2 evening

b: 2 morning, 3 evening

c: 3 morning, 3 evening

**Duration of treatment:** Based on the results of clinical trials, it is recommended that patients be treated for at least six months. During those clinical trials in which patients were treated for one year, patients who failed to show a virological response after six months of treatment (HCV-RNA below lower limit of detection) were unlikely to become sustained virological responders (HCV-RNA below lower limit of detection six months after withdrawal of treatment).

- **Genotype 1:** Treatment should be continued for another six month period (i.e., a total of one year) in patients who exhibit negative HCV-RNA after six months of treatment.
- **Genotypes Non-1:** The decision to extend therapy to one year in patients with negative HCV-RNA after six months of treatment should be based on other prognostic factors (e.g., age > 40 years, male gender, bridging fibrosis).

### PegIntron monotherapy

As monotherapy the PegIntron regimen is 0.5 or 1.0 microgram/kg/week.

**Duration of treatment:** It is recommended that patients be treated initially for six months. In patients showing loss of HCV-RNA at six months, treatment is to be continued for an additional six months, i.e., one year of treatment.

### Dose modification for all patients

If severe adverse reactions or laboratory abnormalities develop during treatment with PegIntron monotherapy or PegIntron in combination with ribavirin, modify the dosages of each product if appropriate, until the adverse reactions abate. Guidelines were developed in clinical trials for dose modification (see Dosage modification guidelines, **Table 2a** for PegIntron monotherapy and **Table 2b** for PegIntron combination therapy with ribavirin).

<b>Table 2a</b> Dose modification guidelines for PegIntron monotherapy		
Laboratory values	Reduce PegIntron to one-half dose if:	Discontinue PegIntron if:
Neutrophils	< 0.75 x 10 <sup>9</sup> /l	< 0.5 x 10 <sup>9</sup> /l
Platelets	< 50 x 10 <sup>9</sup> /l	< 25 x 10 <sup>9</sup> /l

<b>Table 2b</b> Dose modification guidelines for combination therapy (with ribavirin)			
Laboratory values	Reduce only ribavirin dose to 600 mg/day* if:	Reduce only PegIntron dose to one-half dose if:	Discontinue combination therapy if:
Haemoglobin	< 10 g/dl	-	< 8.5 g/dl
Haemoglobin in: Patients with history of stable cardiac disease	≥ 2 g/dl decrease in haemoglobin during any four week period during treatment (permanent dose reduction)		< 12 g/dl after four weeks of dose reduction
White blood cells	-	< 1.5 x 10 <sup>9</sup> /l	< 1.0 x 10 <sup>9</sup> /l
Neutrophils	-	< 0.75 x 10 <sup>9</sup> /l	< 0.5 x 10 <sup>9</sup> /l
Platelets	-	< 50 x 10 <sup>9</sup> /l	< 25 x 10 <sup>9</sup> /l

Bilirubin – direct	-	-	2.5 x ULN**
Bilirubin – indirect	> 5 mg/dl	-	> 4 mg/dl (for > 4 weeks)
Creatinine	-	-	> 2.0 mg/dl
ALT/AST	-	-	2 x baseline and > 10 x ULN**

\* Patients whose dose of ribavirin is reduced to 600 mg daily receive one 200 mg capsule in the morning and two 200 mg capsules in the evening.

\*\* Upper limit of normal

### Special populations

**Use in renal impairment:** The clearance of PegIntron is reduced in patients with significant renal impairment. Patients with creatinine clearance  $\leq 50$  ml/minute must not be treated with PegIntron (see 5.2). It is recommended that patients with moderate renal impairment be closely monitored and that their weekly dose of PegIntron be reduced if medically appropriate.

**Use in hepatic impairment:** The safety and efficacy of PegIntron therapy has not been evaluated in patients with severe hepatic dysfunction, therefore PegIntron must not be used for these patients.

**Use in the elderly ( $\geq 65$  years of age):** There are no apparent age-related effects on the pharmacokinetics of PegIntron. Data from elderly patients treated with a single dose of PegIntron suggest no alteration in PegIntron dose is necessary based on age (see 5.2).

**Use in patients under the age of 18 years:** PegIntron is not recommended for use in children or adolescents under the age of 18, as there is no experience in this group.

### 4.3 Contraindications

- Hypersensitivity to the active substance or to any interferon or to any of the excipients;
- Pregnant women;
- Women who are breast-feeding;
- Existence of or a history of severe psychiatric condition, particularly severe depression, suicidal ideation or suicide attempt;
- A history of severe pre-existing cardiac disease, including unstable or uncontrolled cardiac disease in the previous six months (see 4.4);
- Severe, debilitating medical conditions, including patients with chronic renal failure or creatinine clearance  $< 50$  ml/minute;
- Autoimmune hepatitis or a history of autoimmune disease;
- Severe hepatic dysfunction or decompensated cirrhosis of the liver;
- Pre-existing thyroid disease unless it can be controlled with conventional treatment;
- Epilepsy and/or compromised central nervous system (CNS) function.

### 4.4 Special warnings and special precautions for use

There is no experience with PegIntron in combination with ribavirin in patients who have relapsed after interferon alpha + ribavirin therapy.

**Acute hypersensitivity:** Acute hypersensitivity reactions have been observed rarely during interferon alfa-2b therapy. If such a reaction develops during treatment with PegIntron, discontinue treatment and institute appropriate medical therapy immediately. Transient rashes do not necessitate interruption of treatment.

**Cardiovascular system:** As with interferon alfa-2b, patients with a history of congestive heart failure, myocardial infarction and/or previous or current arrhythmic disorders, receiving PegIntron therapy require close monitoring. It is recommended that patients who have pre-existing cardiac abnormalities have electrocardiograms taken prior to and during the course of treatment. Cardiac arrhythmias (primarily

supraventricular) usually respond to conventional therapy but may require discontinuation of PegIntron therapy.

**Psychiatric and Central Nervous System (CNS):** Severe CNS effects, particularly depression, suicidal ideation and attempted suicide have been observed in some patients during PegIntron therapy. Other CNS effects including aggressive behaviour, confusion and alterations of mental status have been observed with alpha interferon. If patients develop psychiatric or CNS problems, including clinical depression, it is recommended that the patient be carefully monitored due to the potential seriousness of these undesirable effects. If symptoms persist or worsen, discontinue PegIntron therapy.

**Liver function:** As with all interferons, discontinue treatment with PegIntron in patients who develop prolongation of coagulation markers which might indicate liver decompensation.

**Fever:** While fever may be associated with the flu-like syndrome reported commonly during interferon therapy, other causes of persistent fever must be ruled out.

**Hydration:** Adequate hydration must be maintained in patients undergoing PegIntron therapy since hypotension related to fluid depletion has been seen in some patients treated with alpha interferons. Fluid replacement may be necessary.

**Pulmonary changes:** Pulmonary infiltrates, pneumonitis, and pneumonia, occasionally resulting in fatality, have been observed rarely in interferon alpha treated patients. Any patient developing fever, cough, dyspnea or other respiratory symptoms must have a chest X-ray taken. If the chest X-ray shows pulmonary infiltrates or there is evidence of pulmonary function impairment, the patient is to be monitored closely, and, if appropriate, discontinue interferon alpha. Prompt discontinuation of interferon alpha administration and treatment with corticosteroids appear to be associated with resolution of pulmonary adverse events.

**Autoimmune disease:** The development of auto-antibodies has been reported during treatment with alpha interferons. Clinical manifestations of autoimmune disease during interferon therapy may occur more frequently in patients predisposed to the development of autoimmune disorders.

**Ocular changes:** Ophthalmologic disorders, including retinal haemorrhages, cotton wool spots, and retinal artery or vein obstruction have been reported in rare instances after treatment with alpha interferons. Any patient complaining of loss of visual acuity or visual field must have an eye examination. Because these ocular events may occur in conjunction with other disease states, a visual exam prior to initiation of PegIntron therapy is recommended in patients with diabetes mellitus or hypertension.

**Thyroid changes:** Infrequently, patients treated for chronic hepatitis C with interferon alpha have developed thyroid abnormalities, either hypothyroidism or hyperthyroidism. Determine thyroid stimulating hormone (TSH) levels if, during the course of therapy, a patient develops symptoms consistent with possible thyroid dysfunction. In the presence of thyroid dysfunction, PegIntron treatment may be continued if TSH levels can be maintained in the normal range by medication.

**Other:** Due to reports of interferon alpha exacerbating pre-existing psoriatic disease, use of PegIntron in patients with psoriasis is recommended only if the potential benefit justifies the potential risk.

**Laboratory tests:** Standard haematologic tests, blood chemistry and a test of thyroid function must be conducted in all patients prior to initiating therapy. Acceptable baseline values that may be considered as a guideline prior to initiation of PegIntron therapy are:

- Platelets  $\geq 100,000/\text{mm}^3$
- Neutrophil count  $\geq 1,500/\text{mm}^3$
- TSH level must be within normal limits

Laboratory evaluations are to be conducted at weeks 2 and 4 of therapy, and periodically thereafter as clinically appropriate.

#### 4.5 Interaction with other medicinal products and other forms of interaction

Results of a single-dose study with PegIntron demonstrated no effect on the activity of cytochrome (CY) P1A2, CYP2C8/9, CYP2D6, and hepatic CYP3A4 or N-acetyl transferase. Caution should be advised in the interpretation of these results as the use of other forms of interferon alpha result in a 50 % reduction in the clearance and thus a doubling of plasma concentrations of theophylline, a substrate of CYP1A2.

No pharmacokinetic interactions were noted between PegIntron and ribavirin in a multiple-dose pharmacokinetic study.

#### 4.6 Pregnancy and lactation

There are no adequate data on the use of interferon alfa-2b in pregnant women. Interferon alfa-2b has been shown to be abortifacient in primates. PegIntron is likely to also cause this effect. PegIntron should not be used during pregnancy (see 5.3).

PegIntron is recommended for use in fertile women only when they are using effective contraception during the treatment period.

**Lactation:** It is not known whether the components of this medicinal product are excreted in human milk. Because of the potential for adverse reactions in nursing infants, nursing must be discontinued prior to initiation of treatment.

#### 4.7 Effects on ability to drive and use machines

Patients who develop fatigue, somnolence or confusion during treatment with PegIntron are cautioned to avoid driving or operating machinery.

#### 4.8 Undesirable effects

The safety of PegIntron is evaluated from data from two clinical trials: one with PegIntron monotherapy, one with PegIntron in combination with ribavirin. In both cases, patients were treated for one year.

**Table 3** describes the regimens and patient exposure for one year of treatment in patients with no previous exposure to interferon (interferon-naïve patients). Because of a significant overlap in the pattern of undesirable effects with PegIntron monotherapy, groups of patients have been brought together in **Table 4** to show the pattern of reported effects for all monotherapy groups.

<b>Table 3</b> Regimens and patient exposure		
<b>Treatment</b>	<b>Regimen</b>	<b>Number of patients treated for one year</b>
PegIntron + ribavirin	PegIntron (1.5 micrograms/kg/week) + ribavirin (> 10.6 mg/kg/day)	188
Interferon alfa-2b + ribavirin	Interferon alfa-2b (3 MIU three times a week) + ribavirin (1,000/1,200 mg/day)	505
PegIntron monotherapy	PegIntron (0.5 microgram/kg/week)	315
	PegIntron (1.0 microgram/kg/week)	297
	PegIntron (1.5 micrograms/kg/week)	304

<b>Table 4</b> Undesirable effects reported in clinical trials (≥ 10 % of patients in PegIntron + ribavirin group)				
	<b>PegIntron +</b>	<b>Interferon alfa-</b>	<b>PegIntron</b>	

	<b>ribavirin</b>	<b>2b + ribavirin</b>	<b>monotherapy</b>
<b>Application site disorder</b>

<b>Other</b>			
Dizziness	17 %	16 %	7-12 %
Infection viral	10 %	5 %	4-5 %
Mouth dry	10 %	8 %	4-8 %

Undesirable effects reported between 5 and 10 % in the treatment group receiving the recommended dose of PegIntron + ribavirin were increased sweating, chest pain, right upper quadrant (RUQ) pain, paresthaesia, hypothyroidism, constipation, dyspepsia, tachycardia, agitation, nervousness, menorrhagia, menstrual disorder, nonproductive cough, rhinitis, taste perversion, blurred vision.

Undesirable effects reported between 2 and 5 % in the treatment group receiving the recommended dose of PegIntron + ribavirin were injection site pain, flushing, hypotension, lacrimal gland disorder, erythema, malaise, hypertension, syncope, confusion, hyperesthesia, hypoesthesia, hypertonia, decreased libido, tremor, vertigo, hyperthyroidism, flatulence, gingival bleeding, glossitis, loose stools, stomatitis, ulcerative stomatitis, hearing impairment/loss, tinnitus, palpitation, thirst, thrombocytopenia, aggressive behaviour, somnolence, herpes simplex, fungal infection, amenorrhoea, prostatitis, otitis media, bronchitis, nasal congestion, respiratory disorder, rhinorrhea, sinusitis,

eczema, abnormal hair texture, photosensitivity reaction, erythematous rash, maculopapular rash, migraine, conjunctivitis, and lymphadenopathy.

Most cases of neutropaenia and thrombocytopaenia were mild (WHO grades 1 or 2). There were some cases of more severe neutropaenia in patients treated with the recommended doses of PegIntron in combination with ribavirin (WHO grade 3: 39 of 186 [21 %]; and WHO grade 4: 13 of 186 [7 %]).

In a clinical trial, approximately 1.2 % of patients treated with PegIntron or interferon alfa-2b in combination with ribavirin reported life-threatening psychiatric events during treatment. These events included suicidal ideation and attempted suicide.

Rarely reported events with interferon alfa-2b include retinal disorders, diabetes, and arrhythmia.

## **4.9 Overdose**

In clinical trials, cases of accidental overdose, at never more than twice the prescribed dose, were reported. There were no serious reactions. Undesirable effects resolved during continued administration of PegIntron.

## **5. PHARMACOLOGICAL PROPERTIES**

### **5.1 Pharmacodynamic properties**

Pharmacotherapeutic group: Immunostimulants, Cytokines and immunomodulators, Interferons, Peginterferon alfa-2b, ATC code: L03A B10.

PegIntron is a covalent conjugate of recombinant interferon alfa-2b with monomethoxy polyethylene glycol. The average molecular weight of the molecule is approximately 31,300 daltons.

#### **Interferon alfa-2b**

Recombinant interferon alfa-2b is obtained from a clone of *E. coli*, which harbours a genetically engineered plasmid hybrid encompassing an interferon alfa-2b gene from human leukocytes.

*In vitro* and *in vivo* studies suggest that the biological activity of PegIntron is derived from its interferon alfa-2b moiety.

Interferons exert their cellular activities by binding to specific membrane receptors on the cell surface. Studies with other interferons have demonstrated species specificity. However, certain monkey species, e.g., Rhesus monkeys, are susceptible to pharmacodynamic stimulation upon exposure to human type 1 interferons.

Once bound to the cell membrane, interferon initiates a complex sequence of intracellular events that include the induction of certain enzymes. It is thought that this process, at least in part, is responsible for the various cellular responses to interferon, including inhibition of virus replication in virus-infected cells, suppression of cell proliferation and such immunomodulating activities as enhancement of the phagocytic activity of macrophages and augmentation of the specific cytotoxicity of lymphocytes for target cells. Any or all of these activities may contribute to interferon's therapeutic effects.

Recombinant interferon alfa-2b also inhibits viral replication *in vitro* and *in vivo*. Although the exact antiviral mode of action of recombinant interferon alfa-2b is unknown, it appears to alter the host cell metabolism. This action inhibits viral replication or if replication occurs, the progeny virions are unable to leave the cell.

#### **PegIntron**

PegIntron pharmacodynamics were assessed in a rising single-dose trial in healthy subjects by examining changes in oral temperature, concentrations of effector proteins such as serum neopterin and 2'5'-oligoadenylate synthetase (2'5'-OAS), as well as white cell and neutrophil counts. Subjects treated with PegIntron showed mild dose-related elevations in body temperature. Following single doses of PegIntron between 0.25 and 2.0 micrograms/kg/week, serum neopterin concentration was increased in a dose-related manner. Neutrophil and white cell count reductions at the end of week 4 correlated with the dose of PegIntron.

### **PegIntron clinical trials**

Two pivotal trials have been conducted, one (C/I97-010) with PegIntron monotherapy; the other (C/I98-580) with PegIntron in combination with ribavirin. Eligible patients for these trials had chronic hepatitis C confirmed by a positive HCV-RNA polymerase chain reaction (PCR) assay (> 100 copies/ml), a liver biopsy consistent with a histological diagnosis of chronic hepatitis with no other cause for the chronic hepatitis, and abnormal serum ALT.

In the PegIntron monotherapy trial, a total of 916 naïve chronic hepatitis C patients were treated with PegIntron (0.5, 1.0 or 1.5 micrograms/kg/week) for one year with a follow-up period of six months. In addition, 303 patients received interferon alfa-2b (3 million International Units [MIU] three times a week [TIW]) as a comparator. This study showed that PegIntron was superior to interferon alfa-2b (**Table 5**).

In the PegIntron combination trial, 1,530 naïve patients were treated for one year with one of the following combination regimens:

- PegIntron (1.5 micrograms/kg/week) + ribavirin (800 mg/day), (n = 511).
- PegIntron (1.5 micrograms/kg/week for one month followed by 0.5 microgram/kg/week for 11 months) + ribavirin (1,000/1,200 mg/day), (n = 514).
- Interferon alfa-2b (3 MIU TIW) + ribavirin (1,000/1,200 mg/day) (n = 505).

In this trial, the combination of PegIntron (1.5 micrograms/kg/week) and ribavirin was significantly more effective than the combination of interferon alfa-2b and ribavirin (**Table 5**), particularly in patients infected with Genotype 1 (**Table 6**). Sustained response was assessed by the response rate six months after the cessation of treatment.

HCV genotype and baseline virus load are prognostic factors which are known to affect response rates. However, response rates in this trial were shown to be dependent also on the dose of ribavirin administered in combination with PegIntron or interferon alfa-2b. In those patients that received > 10.6 mg/kg ribavirin (800 mg dose in typical 75 kg patient), regardless of genotype or viral load, response rates were significantly higher than in those patients that received ≤ 10.6 mg/kg ribavirin (**Table 6**), while response rates in patients that received > 13.2 mg/kg ribavirin were even higher.

Response rates in this trial were increased if patients were able to maintain compliance. Regardless of genotype, patients who received the recommended combination regimen and received ≥ 80 % of their treatment with PegIntron and ribavirin had a higher sustained response 6 months after 1 year of treatment than those who took < 80 % of their treatment (72 % vs. 46 %).

I/R Interferon alfa-2b (3 MIU) + ribavirin (1,000/1,200 mg)

In the PegIntron monotherapy study, the Quality of Life was generally less affected by 0.5 microgram/kg of PegIntron than by either 1.0 microgram/kg of PegIntron once weekly or 3 MIU of interferon alfa-2b TIW.

## 5.2 Pharmacokinetic properties

PegIntron is a well characterized polyethylene glycol-modified (“pegylated”) derivative of interferon alfa-2b and is predominantly composed of monopegylated species. The plasma half-life of PegIntron is prolonged compared with non-pegylated interferon alfa-2b. PegIntron has a potential to depegylate to free interferon alfa-2b. The biologic activity of the pegylated isomers is qualitatively similar, but weaker than free interferon alfa-2b.

Following subcutaneous administration, maximal serum concentrations occur between 15-44 hours post-dose, and are sustained for up to 48-72 hours post-dose.

PegIntron  $C_{max}$  and AUC measurements increase in a dose-related manner. Mean apparent volume of distribution is 0.99 l/kg.

Upon multiple dosing, there is an accumulation of immunoreactive interferons. There is, however, only a modest increase in biologic activity as measured by a bioassay.

Mean (SD) PegIntron elimination half-life is approximately 40 hours (13.3 hours), with apparent clearance of 22.0 ml/hr·kg. The mechanisms involved in clearance of interferons in man have not yet been fully elucidated. However, renal elimination may account for a minority (approximately 30 %) of PegIntron apparent clearance.

**Renal function:** Renal clearance appears to account for 30 % of total clearance of PegIntron. In a single dose study (1.0 microgram/kg) in patients with impaired renal function,  $C_{max}$ , AUC, and half-life increased in relation to the degree of renal impairment.

Based on these data, no dose modification is recommended based on creatinine clearance. However, because of marked intra-subject variability in interferon pharmacokinetics, it is recommended that patients be monitored closely during treatment with PegIntron (see 4.2). Patients with severe renal dysfunction or creatinine clearance < 50 ml/min must not be treated with PegIntron.

**Hepatic function:** The pharmacokinetics of PegIntron have not been evaluated in patients with severe hepatic dysfunction.

**Elderly patients ≥ 65 years of age:** The pharmacokinetics of PegIntron following a single subcutaneous dose of 1.0 microgram/kg were not affected by age. The data suggest that no alteration in PegIntron dosage is necessary based on advancing age.

**Patients under the age of 18 years:** Specific pharmacokinetic evaluations have not been performed on these patients. PegIntron is indicated for the treatment of chronic hepatitis C only in patients 18 years of age or older.

**Interferon neutralising factors:** Interferon neutralising factor assays were performed on serum samples of patients who received PegIntron in the clinical trial. Interferon neutralising factors are antibodies which neutralise the antiviral activity of interferon. The clinical incidence of neutralising factors in patients who received PegIntron 0.5 micrograms/kg is 1.1 %.

### 5.3 Preclinical safety data

**PegIntron:** Adverse events not observed in clinical trials were not seen in toxicity studies in monkeys. These studies were limited to four weeks due to the appearance of anti-interferon antibodies in most monkeys.

Reproduction studies of PegIntron have not been performed. Interferon alfa-2b has been shown to be an abortifacient in primates. PegIntron is likely to also cause this effect. Effects on fertility have not been determined. PegIntron showed no genotoxic potential. (see 4.6 for relevant human data. It is not known whether the components of this medicinal product are excreted in human milk. Therefore, nursing must be discontinued prior to the initiation of therapy.)

The relative non-toxicity of monomethoxy-polyethylene glycol (mPEG), which is liberated from PegIntron by metabolism *in vivo* has been demonstrated in preclinical acute and subchronic toxicity studies in rodents and monkeys, standard embryo-foetal development studies and in *in vitro* mutagenicity assays.

**PegIntron plus ribavirin:** When used in combination with ribavirin, PegIntron did not cause any effects not previously seen with either active substance alone. The major treatment-related change was a reversible, mild to moderate anaemia, the severity of which was greater than that produced by either active substance alone.

## **6. PHARMACEUTICAL PARTICULARS**

### **6.1 List of excipients**

Powder for solution for injection:

Disodium phosphate, anhydrous,  
Sodium dihydrogen phosphate dihydrate,  
Sucrose,  
Polysorbate 80.

Solvent for parenteral use:

Water for injections.

Deliverable volume from pen = 0.5 ml. An overfill is also included for proper dispensing from the pen delivery system.

### **6.2 Incompatibilities**

This medicinal product should only be reconstituted with the solvent provided and must not be mixed with other medicinal products (see also 6.6).

### **6.3 Shelf life**

1 year

After reconstitution:

- Chemical and physical in-use stability has been demonstrated for 24 hours at 2°C - 8°C.
- From a microbiological point of view, the product is to be used immediately. If not used immediately, in-use storage times and conditions prior to use are the responsibility of the user and would normally not be longer than 24 hours at 2°C - 8°C.

### **6.4 Special precautions for storage**

Store at 2°C - 8°C (in a refrigerator)

### **6.5 Nature and contents of container**

The powder and solvent are both contained in a two-chamber cartridge, Type I flint glass, separated by a bromobutyl rubber plunger. The cartridge is sealed at one end with a polypropylene cap containing a bromobutyl rubber liner and at the other end by a bromobutyl rubber plunger.

PegIntron 100 micrograms is supplied as:

- 1 pen containing powder and solvent for solution for injection, 1 injection needle and 2 cleansing swabs;
- 4 pens containing powder and solvent for solution for injection, 4 injection needles and 8 cleansing swabs;
- 6 pens containing powder and solvent for solution for injection, 6 injection needles and 12 cleansing swabs;
- 12 pens containing powder and solvent for solution for injection, 12 injection needles and 24 cleansing swabs.

Not all pack sizes may be marketed.

## **6.6 Instructions for use and handling and disposal**

PegIntron pre-filled pen contains a powder of peginterferon alfa-2b and a solvent for solution at a strength of 100 micrograms for single use. Each pen is reconstituted with the solvent provided in the two-chamber cartridge (water for injections) for administration of up to 0.5 ml of solution. A small volume is lost during preparation of PegIntron for injection when the dose is measured and injected. Therefore, each pen contains an excess amount of solvent and PegIntron powder to ensure delivery of the labelled dose in 0.5 ml of PegIntron, solution for injection. The reconstituted solution has a concentration of 100 micrograms in 0.5 ml.

PegIntron is injected subcutaneously after reconstituting the powder as instructed, attaching an injection needle and setting the prescribed dose. A complete and illustrated set of instructions is provided in the Annex to the Package Leaflet.

Remove PegIntron pre-filled pen from the refrigerator before administration to allow the solvent to reach room temperature (not more than 25°C).

As for all parenteral medicinal products, inspect visually the reconstituted solution prior to administration. Do not use if discolouration is present. After administering the dose, discard the PegIntron pre-filled pen and any unused solution contained in it.

## **7. MARKETING AUTHORISATION HOLDER**

SP Europe  
73, rue de Stalle  
B-1180 Bruxelles  
Belgium

## **8. MARKETING AUTHORISATION NUMBER(S)**

EU/

## **9. DATE OF FIRST AUTHORISATION/RENEWAL OF THE AUTHORISATION**

## **10. DATE OF REVISION OF THE TEXT**

## 1. NAME OF THE MEDICINAL PRODUCT

PegIntron 120 micrograms, powder and solvent for solution for injection in pre-filled pen

## 2. QUALITATIVE AND QUANTITATIVE COMPOSITION

Each pre-filled pen of PegIntron 120 micrograms contains a sufficient amount of peginterferon alfa-2b (conjugation of recombinant interferon alfa-2b with monomethoxy polyethylene glycol) in a powder for solution for injection, and the corresponding amount of solvent, to provide 120 micrograms in 0.5 ml of peginterferon alfa-2b when reconstituted as recommended.

For excipients, see 6.1.

## 3. PHARMACEUTICAL FORM

Powder and solvent for solution for injection

## 4. CLINICAL PARTICULARS

### 4.1 Therapeutic indications

PegIntron is indicated for the treatment of adult patients with histologically proven chronic hepatitis C who have elevated transaminases without liver decompensation and who are positive for serum HCV-RNA or anti-HCV.

The best way to use PegIntron in this indication is in combination with ribavirin.

This combination is indicated in naïve patients as well as in patients who have previously responded (with normalisation of ALT at the end of treatment) to interferon alpha monotherapy but who have subsequently relapsed.

Interferon monotherapy, including PegIntron, is indicated mainly in case of intolerance or contraindication to ribavirin.

Please refer also to the ribavirin Summary of Product Characteristics (SPC) when PegIntron is to be used in combination with ribavirin.

### 4.2 Posology and method of administration

Treatment should be initiated and monitored only by a physician experienced in the management of patients with hepatitis C.

#### Dose to be administered

PegIntron should be administered as a once weekly subcutaneous injection. The dose administered depends on whether it is used in combination with ribavirin or as monotherapy.

#### Combination therapy

PegIntron 1.5 micrograms/kg/week in combination with ribavirin capsules.

The dose of ribavirin to be used in combination with PegIntron is based on patient body weight (**Table 1**). Ribavirin capsules are to be administered orally each day in two divided doses with food (morning and evening).

<b>Table 1</b> Ribavirin dose based on body weight
--

Patient weight (kg)	Daily ribavirin dose	Number of 200 mg capsules
< 65	800 mg	4 <sup>a</sup>
65 – 85	1,000 mg	5 <sup>b</sup>
> 85	1,200 mg	6 <sup>c</sup>

a: 2 morning, 2 evening

b: 2 morning, 3 evening

c: 3 morning, 3 evening

**Duration of treatment:** Based on the results of clinical trials, it is recommended that patients be treated for at least six months. During those clinical trials in which patients were treated for one year, patients who failed to show a virological response after six months of treatment (HCV-RNA below lower limit of detection) were unlikely to become sustained virological responders (HCV-RNA below lower limit of detection six months after withdrawal of treatment).

- **Genotype 1:** Treatment should be continued for another six month period (i.e., a total of one year) in patients who exhibit negative HCV-RNA after six months of treatment.
- **Genotypes Non-1:** The decision to extend therapy to one year in patients with negative HCV-RNA after six months of treatment should be based on other prognostic factors (e.g., age > 40 years, male gender, bridging fibrosis).

### PegIntron monotherapy

As monotherapy the PegIntron regimen is 0.5 or 1.0 microgram/kg/week.

**Duration of treatment:** It is recommended that patients be treated initially for six months. In patients showing loss of HCV-RNA at six months, treatment is to be continued for an additional six months, i.e., one year of treatment.

### Dose modification for all patients

If severe adverse reactions or laboratory abnormalities develop during treatment with PegIntron monotherapy or PegIntron in combination with ribavirin, modify the dosages of each product if appropriate, until the adverse reactions abate. Guidelines were developed in clinical trials for dose modification (see Dosage modification guidelines, **Table 2a** for PegIntron monotherapy and **Table 2b** for PegIntron combination therapy with ribavirin).

<b>Table 2a</b> Dose modification guidelines for PegIntron monotherapy		
Laboratory values	Reduce PegIntron to one-half dose if:	Discontinue PegIntron if:
Neutrophils	< 0.75 x 10 <sup>9</sup> /l	< 0.5 x 10 <sup>9</sup> /l
Platelets	< 50 x 10 <sup>9</sup> /l	< 25 x 10 <sup>9</sup> /l

<b>Table 2b</b> Dose modification guidelines for combination therapy (with ribavirin)			
Laboratory values	Reduce only ribavirin dose to 600 mg/day* if:	Reduce only PegIntron dose to one-half dose if:	Discontinue combination therapy if:
Haemoglobin	< 10 g/dl	-	< 8.5 g/dl
Haemoglobin in: Patients with history of stable cardiac disease	≥ 2 g/dl decrease in haemoglobin during any four week period during treatment (permanent dose reduction)		< 12 g/dl after four weeks of dose reduction
White blood cells	-	< 1.5 x 10 <sup>9</sup> /l	< 1.0 x 10 <sup>9</sup> /l
Neutrophils	-	< 0.75 x 10 <sup>9</sup> /l	< 0.5 x 10 <sup>9</sup> /l
Platelets	-	< 50 x 10 <sup>9</sup> /l	< 25 x 10 <sup>9</sup> /l

Bilirubin – direct	-	-	2.5 x ULN**
Bilirubin – indirect	> 5 mg/dl	-	> 4 mg/dl (for > 4 weeks)
Creatinine	-	-	> 2.0 mg/dl
ALT/AST	-	-	2 x baseline and > 10 x ULN**

\* Patients whose dose of ribavirin is reduced to 600 mg daily receive one 200 mg capsule in the morning and two 200 mg capsules in the evening.

\*\* Upper limit of normal

### Special populations

**Use in renal impairment:** The clearance of PegIntron is reduced in patients with significant renal impairment. Patients with creatinine clearance  $\leq 50$  ml/minute must not be treated with PegIntron (see 5.2). It is recommended that patients with moderate renal impairment be closely monitored and that their weekly dose of PegIntron be reduced if medically appropriate.

**Use in hepatic impairment:** The safety and efficacy of PegIntron therapy has not been evaluated in patients with severe hepatic dysfunction, therefore PegIntron must not be used for these patients.

**Use in the elderly ( $\geq 65$  years of age):** There are no apparent age-related effects on the pharmacokinetics of PegIntron. Data from elderly patients treated with a single dose of PegIntron suggest no alteration in PegIntron dose is necessary based on age (see 5.2).

**Use in patients under the age of 18 years:** PegIntron is not recommended for use in children or adolescents under the age of 18, as there is no experience in this group.

### 4.3 Contraindications

- Hypersensitivity to the active substance or to any interferon or to any of the excipients;
- Pregnant women;
- Women who are breast-feeding;
- Existence of or a history of severe psychiatric condition, particularly severe depression, suicidal ideation or suicide attempt;
- A history of severe pre-existing cardiac disease, including unstable or uncontrolled cardiac disease in the previous six months (see 4.4);
- Severe, debilitating medical conditions, including patients with chronic renal failure or creatinine clearance  $< 50$  ml/minute;
- Autoimmune hepatitis or a history of autoimmune disease;
- Severe hepatic dysfunction or decompensated cirrhosis of the liver;
- Pre-existing thyroid disease unless it can be controlled with conventional treatment;
- Epilepsy and/or compromised central nervous system (CNS) function.

### 4.4 Special warnings and special precautions for use

There is no experience with PegIntron in combination with ribavirin in patients who have relapsed after interferon alpha + ribavirin therapy.

**Acute hypersensitivity:** Acute hypersensitivity reactions have been observed rarely during interferon alfa-2b therapy. If such a reaction develops during treatment with PegIntron, discontinue treatment and institute appropriate medical therapy immediately. Transient rashes do not necessitate interruption of treatment.

**Cardiovascular system:** As with interferon alfa-2b, patients with a history of congestive heart failure, myocardial infarction and/or previous or current arrhythmic disorders, receiving PegIntron therapy require close monitoring. It is recommended that patients who have pre-existing cardiac abnormalities have electrocardiograms taken prior to and during the course of treatment. Cardiac arrhythmias (primarily

supraventricular) usually respond to conventional therapy but may require discontinuation of PegIntron therapy.

**Psychiatric and Central Nervous System (CNS):** Severe CNS effects, particularly depression, suicidal ideation and attempted suicide have been observed in some patients during PegIntron therapy. Other CNS effects including aggressive behaviour, confusion and alterations of mental status have been observed with alpha interferon. If patients develop psychiatric or CNS problems, including clinical depression, it is recommended that the patient be carefully monitored due to the potential seriousness of these undesirable effects. If symptoms persist or worsen, discontinue PegIntron therapy.

**Liver function:** As with all interferons, discontinue treatment with PegIntron in patients who develop prolongation of coagulation markers which might indicate liver decompensation.

**Fever:** While fever may be associated with the flu-like syndrome reported commonly during interferon therapy, other causes of persistent fever must be ruled out.

**Hydration:** Adequate hydration must be maintained in patients undergoing PegIntron therapy since hypotension related to fluid depletion has been seen in some patients treated with alpha interferons. Fluid replacement may be necessary.

**Pulmonary changes:** Pulmonary infiltrates, pneumonitis, and pneumonia, occasionally resulting in fatality, have been observed rarely in interferon alpha treated patients. Any patient developing fever, cough, dyspnea or other respiratory symptoms must have a chest X-ray taken. If the chest X-ray shows pulmonary infiltrates or there is evidence of pulmonary function impairment, the patient is to be monitored closely, and, if appropriate, discontinue interferon alpha. Prompt discontinuation of interferon alpha administration and treatment with corticosteroids appear to be associated with resolution of pulmonary adverse events.

**Autoimmune disease:** The development of auto-antibodies has been reported during treatment with alpha interferons. Clinical manifestations of autoimmune disease during interferon therapy may occur more frequently in patients predisposed to the development of autoimmune disorders.

**Ocular changes:** Ophthalmologic disorders, including retinal haemorrhages, cotton wool spots, and retinal artery or vein obstruction have been reported in rare instances after treatment with alpha interferons. Any patient complaining of loss of visual acuity or visual field must have an eye examination. Because these ocular events may occur in conjunction with other disease states, a visual exam prior to initiation of PegIntron therapy is recommended in patients with diabetes mellitus or hypertension.

**Thyroid changes:** Infrequently, patients treated for chronic hepatitis C with interferon alpha have developed thyroid abnormalities, either hypothyroidism or hyperthyroidism. Determine thyroid stimulating hormone (TSH) levels if, during the course of therapy, a patient develops symptoms consistent with possible thyroid dysfunction. In the presence of thyroid dysfunction, PegIntron treatment may be continued if TSH levels can be maintained in the normal range by medication.

**Other:** Due to reports of interferon alpha exacerbating pre-existing psoriatic disease, use of PegIntron in patients with psoriasis is recommended only if the potential benefit justifies the potential risk.

**Laboratory tests:** Standard haematologic tests, blood chemistry and a test of thyroid function must be conducted in all patients prior to initiating therapy. Acceptable baseline values that may be considered as a guideline prior to initiation of PegIntron therapy are:

- Platelets  $\geq 100,000/\text{mm}^3$
- Neutrophil count  $\geq 1,500/\text{mm}^3$
- TSH level must be within normal limits

Laboratory evaluations are to be conducted at weeks 2 and 4 of therapy, and periodically thereafter as clinically appropriate.

#### 4.5 Interaction with other medicinal products and other forms of interaction

Results of a single-dose study with PegIntron demonstrated no effect on the activity of cytochrome (CY) P1A2, CYP2C8/9, CYP2D6, and hepatic CYP3A4 or N-acetyl transferase. Caution should be advised in the interpretation of these results as the use of other forms of interferon alpha result in a 50 % reduction in the clearance and thus a doubling of plasma concentrations of theophylline, a substrate of CYP1A2.

No pharmacokinetic interactions were noted between PegIntron and ribavirin in a multiple-dose pharmacokinetic study.

#### 4.6 Pregnancy and lactation

There are no adequate data on the use of interferon alfa-2b in pregnant women. Interferon alfa-2b has been shown to be abortifacient in primates. PegIntron is likely to also cause this effect. PegIntron should not be used during pregnancy (see 5.3).

PegIntron is recommended for use in fertile women only when they are using effective contraception during the treatment period.

**Lactation:** It is not known whether the components of this medicinal product are excreted in human milk. Because of the potential for adverse reactions in nursing infants, nursing must be discontinued prior to initiation of treatment.

#### 4.7 Effects on ability to drive and use machines

Patients who develop fatigue, somnolence or confusion during treatment with PegIntron are cautioned to avoid driving or operating machinery.

#### 4.8 Undesirable effects

The safety of PegIntron is evaluated from data from two clinical trials: one with PegIntron monotherapy, one with PegIntron in combination with ribavirin. In both cases, patients were treated for one year.

**Table 3** describes the regimens and patient exposure for one year of treatment in patients with no previous exposure to interferon (interferon-naïve patients). Because of a significant overlap in the pattern of undesirable effects with PegIntron monotherapy, groups of patients have been brought together in **Table 4** to show the pattern of reported effects for all monotherapy groups.

<b>Table 3</b> Regimens and patient exposure		
<b>Treatment</b>	<b>Regimen</b>	<b>Number of patients treated for one year</b>
PegIntron + ribavirin	PegIntron (1.5 micrograms/kg/week) + ribavirin (> 10.6 mg/kg/day)	188
Interferon alfa-2b + ribavirin	Interferon alfa-2b (3 MIU three times a week) + ribavirin (1,000/1,200 mg/day)	505
PegIntron monotherapy	PegIntron (0.5 microgram/kg/week)	315
	PegIntron (1.0 microgram/kg/week)	297
	PegIntron (1.5 micrograms/kg/week)	304

<b>Table 4</b> Undesirable effects reported in clinical trials (≥ 10 % of patients in PegIntron + ribavirin group)

<b>Other</b>			
Dizziness	17 %	16 %	7-12 %
Infection viral	10 %	5 %	4-5 %
Mouth dry	10 %	8 %	4-8 %

Undesirable effects reported between 5 and 10 % in the treatment group receiving the recommended dose of PegIntron + ribavirin were increased sweating, chest pain, right upper quadrant (RUQ) pain, paresthaesia, hypothyroidism, constipation, dyspepsia, tachycardia, agitation, nervousness, menorrhagia, menstrual disorder, nonproductive cough, rhinitis, taste perversion, blurred vision.

Undesirable effects reported between 2 and 5 % in the treatment group receiving the recommended dose of PegIntron + ribavirin were injection site pain, flushing, hypotension, lacrimal gland disorder, erythema, malaise, hypertension, syncope, confusion, hyperesthesia, hypoesthesia, hypertonia, decreased libido, tremor, vertigo, hyperthyroidism, flatulence, gingival bleeding, glossitis, loose stools, stomatitis, ulcerative stomatitis, hearing impairment/loss, tinnitus, palpitation, thirst, thrombocytopenia, aggressive behaviour, somnolence, herpes simplex, fungal infection, amenorrhoea, prostatitis, otitis media, bronchitis, nasal congestion, respiratory disorder, rhinorrhea, sinusitis,

eczema, abnormal hair texture, photosensitivity reaction, erythematous rash, maculopapular rash, migraine, conjunctivitis, and lymphadenopathy.

Most cases of neutropaenia and thrombocytopaenia were mild (WHO grades 1 or 2). There were some cases of more severe neutropaenia in patients treated with the recommended doses of PegIntron in combination with ribavirin (WHO grade 3: 39 of 186 [21 %]; and WHO grade 4: 13 of 186 [7 %]).

In a clinical trial, approximately 1.2 % of patients treated with PegIntron or interferon alfa-2b in combination with ribavirin reported life-threatening psychiatric events during treatment. These events included suicidal ideation and attempted suicide.

Rarely reported events with interferon alfa-2b include retinal disorders, diabetes, and arrhythmia.

## **4.9 Overdose**

In clinical trials, cases of accidental overdose, at never more than twice the prescribed dose, were reported. There were no serious reactions. Undesirable effects resolved during continued administration of PegIntron.

## **5. PHARMACOLOGICAL PROPERTIES**

### **5.1 Pharmacodynamic properties**

Pharmacotherapeutic group: Immunostimulants, Cytokines and immunomodulators, Interferons, Peginterferon alfa-2b, ATC code: L03A B10.

PegIntron is a covalent conjugate of recombinant interferon alfa-2b with monomethoxy polyethylene glycol. The average molecular weight of the molecule is approximately 31,300 daltons.

#### **Interferon alfa-2b**

Recombinant interferon alfa-2b is obtained from a clone of *E. coli*, which harbours a genetically engineered plasmid hybrid encompassing an interferon alfa-2b gene from human leukocytes.

*In vitro* and *in vivo* studies suggest that the biological activity of PegIntron is derived from its interferon alfa-2b moiety.

Interferons exert their cellular activities by binding to specific membrane receptors on the cell surface. Studies with other interferons have demonstrated species specificity. However, certain monkey species, e.g., Rhesus monkeys, are susceptible to pharmacodynamic stimulation upon exposure to human type 1 interferons.

Once bound to the cell membrane, interferon initiates a complex sequence of intracellular events that include the induction of certain enzymes. It is thought that this process, at least in part, is responsible for the various cellular responses to interferon, including inhibition of virus replication in virus-infected cells, suppression of cell proliferation and such immunomodulating activities as enhancement of the phagocytic activity of macrophages and augmentation of the specific cytotoxicity of lymphocytes for target cells. Any or all of these activities may contribute to interferon's therapeutic effects.

Recombinant interferon alfa-2b also inhibits viral replication *in vitro* and *in vivo*. Although the exact antiviral mode of action of recombinant interferon alfa-2b is unknown, it appears to alter the host cell metabolism. This action inhibits viral replication or if replication occurs, the progeny virions are unable to leave the cell.

#### **PegIntron**

PegIntron pharmacodynamics were assessed in a rising single-dose trial in healthy subjects by examining changes in oral temperature, concentrations of effector proteins such as serum neopterin and 2'5'-oligoadenylate synthetase (2'5'-OAS), as well as white cell and neutrophil counts. Subjects treated with PegIntron showed mild dose-related elevations in body temperature. Following single doses of PegIntron between 0.25 and 2.0 micrograms/kg/week, serum neopterin concentration was increased in a dose-related manner. Neutrophil and white cell count reductions at the end of week 4 correlated with the dose of PegIntron.

### **PegIntron clinical trials**

Two pivotal trials have been conducted, one (C/I97-010) with PegIntron monotherapy; the other (C/I98-580) with PegIntron in combination with ribavirin. Eligible patients for these trials had chronic hepatitis C confirmed by a positive HCV-RNA polymerase chain reaction (PCR) assay (> 100 copies/ml), a liver biopsy consistent with a histological diagnosis of chronic hepatitis with no other cause for the chronic hepatitis, and abnormal serum ALT.

In the PegIntron monotherapy trial, a total of 916 naïve chronic hepatitis C patients were treated with PegIntron (0.5, 1.0 or 1.5 micrograms/kg/week) for one year with a follow-up period of six months. In addition, 303 patients received interferon alfa-2b (3 million International Units [MIU] three times a week [TIW]) as a comparator. This study showed that PegIntron was superior to interferon alfa-2b (**Table 5**).

In the PegIntron combination trial, 1,530 naïve patients were treated for one year with one of the following combination regimens:

- PegIntron (1.5 micrograms/kg/week) + ribavirin (800 mg/day), (n = 511).
- PegIntron (1.5 micrograms/kg/week for one month followed by 0.5 microgram/kg/week for 11 months) + ribavirin (1,000/1,200 mg/day), (n = 514).
- Interferon alfa-2b (3 MIU TIW) + ribavirin (1,000/1,200 mg/day) (n = 505).

In this trial, the combination of PegIntron (1.5 micrograms/kg/week) and ribavirin was significantly more effective than the combination of interferon alfa-2b and ribavirin (**Table 5**), particularly in patients infected with Genotype 1 (**Table 6**). Sustained response was assessed by the response rate six months after the cessation of treatment.

HCV genotype and baseline virus load are prognostic factors which are known to affect response rates. However, response rates in this trial were shown to be dependent also on the dose of ribavirin administered in combination with PegIntron or interferon alfa-2b. In those patients that received > 10.6 mg/kg ribavirin (800 mg dose in typical 75 kg patient), regardless of genotype or viral load, response rates were significantly higher than in those patients that received ≤ 10.6 mg/kg ribavirin (**Table 6**), while response rates in patients that received > 13.2 mg/kg ribavirin were even higher.

Response rates in this trial were increased if patients were able to maintain compliance. Regardless of genotype, patients who received the recommended combination regimen and received ≥ 80 % of their treatment with PegIntron and ribavirin had a higher sustained response 6 months after 1 year of treatment than those who took < 80 % of their treatment (72 % vs. 46 %).

P 0.5/R PegIntron (1.5 to 0.5 microgram/kg) + ribavirin (1,000/1,200 mg)

I/R Interferon alfa-2b (3 MIU) + ribavirin (1,000/1,200 mg)

In the PegIntron monotherapy study, the Quality of Life was generally less affected by 0.5 microgram/kg of PegIntron than by either 1.0 microgram/kg of PegIntron once weekly or 3 MIU of interferon alfa-2b TIW.

## 5.2 Pharmacokinetic properties

PegIntron is a well characterized polyethylene glycol-modified (“pegylated”) derivative of interferon alfa-2b and is predominantly composed of monopegylated species. The plasma half-life of PegIntron is prolonged compared with non-pegylated interferon alfa-2b. PegIntron has a potential to depegylate to free interferon alfa-2b. The biologic activity of the pegylated isomers is qualitatively similar, but weaker than free interferon alfa-2b.

Following subcutaneous administration, maximal serum concentrations occur between 15-44 hours post-dose, and are sustained for up to 48-72 hours post-dose.

PegIntron  $C_{max}$  and AUC measurements increase in a dose-related manner. Mean apparent volume of distribution is 0.99 l/kg.

Upon multiple dosing, there is an accumulation of immunoreactive interferons. There is, however, only a modest increase in biologic activity as measured by a bioassay.

Mean (SD) PegIntron elimination half-life is approximately 40 hours (13.3 hours), with apparent clearance of 22.0 ml/hr·kg. The mechanisms involved in clearance of interferons in man have not yet been fully elucidated. However, renal elimination may account for a minority (approximately 30 %) of PegIntron apparent clearance.

**Renal function:** Renal clearance appears to account for 30 % of total clearance of PegIntron. In a single dose study (1.0 microgram/kg) in patients with impaired renal function,  $C_{max}$ , AUC, and half-life increased in relation to the degree of renal impairment.

Based on these data, no dose modification is recommended based on creatinine clearance. However, because of marked intra-subject variability in interferon pharmacokinetics, it is recommended that patients be monitored closely during treatment with PegIntron (see 4.2). Patients with severe renal dysfunction or creatinine clearance < 50 ml/min must not be treated with PegIntron.

**Hepatic function:** The pharmacokinetics of PegIntron have not been evaluated in patients with severe hepatic dysfunction.

**Elderly patients ≥ 65 years of age:** The pharmacokinetics of PegIntron following a single subcutaneous dose of 1.0 microgram/kg were not affected by age. The data suggest that no alteration in PegIntron dosage is necessary based on advancing age.

**Patients under the age of 18 years:** Specific pharmacokinetic evaluations have not been performed on these patients. PegIntron is indicated for the treatment of chronic hepatitis C only in patients 18 years of age or older.

**Interferon neutralising factors:** Interferon neutralising factor assays were performed on serum samples of patients who received PegIntron in the clinical trial. Interferon neutralising factors are antibodies which neutralise the antiviral activity of interferon. The clinical incidence of neutralising factors in patients who received PegIntron 0.5 micrograms/kg is 1.1 %.

### 5.3 Preclinical safety data

**PegIntron:** Adverse events not observed in clinical trials were not seen in toxicity studies in monkeys. These studies were limited to four weeks due to the appearance of anti-interferon antibodies in most monkeys.

Reproduction studies of PegIntron have not been performed. Interferon alfa-2b has been shown to be an abortifacient in primates. PegIntron is likely to also cause this effect. Effects on fertility have not been determined. PegIntron showed no genotoxic potential. (see 4.6 for relevant human data. It is not known whether the components of this medicinal product are excreted in human milk. Therefore, nursing must be discontinued prior to the initiation of therapy.)

The relative non-toxicity of monomethoxy-polyethylene glycol (mPEG), which is liberated from PegIntron by metabolism *in vivo* has been demonstrated in preclinical acute and subchronic toxicity studies in rodents and monkeys, standard embryo-foetal development studies and in *in vitro* mutagenicity assays.

**PegIntron plus ribavirin:** When used in combination with ribavirin, PegIntron did not cause any effects not previously seen with either active substance alone. The major treatment-related change was a reversible, mild to moderate anaemia, the severity of which was greater than that produced by either active substance alone.

## **6. PHARMACEUTICAL PARTICULARS**

### **6.1 List of excipients**

Powder for solution for injection:

Disodium phosphate, anhydrous,  
Sodium dihydrogen phosphate dihydrate,  
Sucrose,  
Polysorbate 80.

Solvent for parenteral use:

Water for injections.

Deliverable volume from pen = 0.5 ml. An overfill is also included for proper dispensing from the pen delivery system.

### **6.2 Incompatibilities**

This medicinal product should only be reconstituted with the solvent provided and must not be mixed with other medicinal products (see also 6.6).

### **6.3 Shelf life**

1 year

After reconstitution:

- Chemical and physical in-use stability has been demonstrated for 24 hours at 2°C - 8°C.
- From a microbiological point of view, the product is to be used immediately. If not used immediately, in-use storage times and conditions prior to use are the responsibility of the user and would normally not be longer than 24 hours at 2°C - 8°C.

### **6.4 Special precautions for storage**

Store at 2°C - 8°C (in a refrigerator)

### **6.5 Nature and contents of container**

The powder and solvent are both contained in a two-chamber cartridge, Type I flint glass, separated by a bromobutyl rubber plunger. The cartridge is sealed at one end with a polypropylene cap containing a bromobutyl rubber liner and at the other end by a bromobutyl rubber plunger.

PegIntron 120 micrograms is supplied as:

- 1 pen containing powder and solvent for solution for injection, 1 injection needle and 2 cleansing swabs;
- 4 pens containing powder and solvent for solution for injection, 4 injection needles and 8 cleansing swabs;
- 6 pens containing powder and solvent for solution for injection, 6 injection needles and 12 cleansing swabs;
- 12 pens containing powder and solvent for solution for injection, 12 injection needles and 24 cleansing swabs.

Not all pack sizes may be marketed.

## **6.6 Instructions for use and handling and disposal**

PegIntron pre-filled pen contains a powder of peginterferon alfa-2b and a solvent for solution at a strength of 120 micrograms for single use. Each pen is reconstituted with the solvent provided in the two-chamber cartridge (water for injections) for administration of up to 0.5 ml of solution. A small volume is lost during preparation of PegIntron for injection when the dose is measured and injected. Therefore, each pen contains an excess amount of solvent and PegIntron powder to ensure delivery of the labelled dose in 0.5 ml of PegIntron, solution for injection. The reconstituted solution has a concentration of 120 micrograms in 0.5 ml.

PegIntron is injected subcutaneously after reconstituting the powder as instructed, attaching an injection needle and setting the prescribed dose. A complete and illustrated set of instructions is provided in the Annex to the Package Leaflet.

Remove PegIntron pre-filled pen from the refrigerator before administration to allow the solvent to reach room temperature (not more than 25°C).

As for all parenteral medicinal products, inspect visually the reconstituted solution prior to administration. Do not use if discolouration is present. After administering the dose, discard the PegIntron pre-filled pen and any unused solution contained in it.

## **7. MARKETING AUTHORISATION HOLDER**

SP Europe  
73, rue de Stalle  
B-1180 Bruxelles  
Belgium

## **8. MARKETING AUTHORISATION NUMBER(S)**

EU/

## **9. DATE OF FIRST AUTHORISATION/RENEWAL OF THE AUTHORISATION**

## **10. DATE OF REVISION OF THE TEXT**

## 1. NAME OF THE MEDICINAL PRODUCT

PegIntron 150 micrograms, powder and solvent for solution for injection in pre-filled pen

## 2. QUALITATIVE AND QUANTITATIVE COMPOSITION

Each pre-filled pen of PegIntron 150 micrograms contains a sufficient amount of peginterferon alfa-2b (conjugation of recombinant interferon alfa-2b with monomethoxy polyethylene glycol) in a powder for solution for injection, and the corresponding amount of solvent, to provide 150 micrograms in 0.5 ml of peginterferon alfa-2b when reconstituted as recommended.

For excipients, see 6.1.

## 3. PHARMACEUTICAL FORM

Powder and solvent for solution for injection

## 4. CLINICAL PARTICULARS

### 4.1 Therapeutic indications

PegIntron is indicated for the treatment of adult patients with histologically proven chronic hepatitis C who have elevated transaminases without liver decompensation and who are positive for serum HCV-RNA or anti-HCV.

The best way to use PegIntron in this indication is in combination with ribavirin.

This combination is indicated in naïve patients as well as in patients who have previously responded (with normalisation of ALT at the end of treatment) to interferon alpha monotherapy but who have subsequently relapsed.

Interferon monotherapy, including PegIntron, is indicated mainly in case of intolerance or contraindication to ribavirin.

Please refer also to the ribavirin Summary of Product Characteristics (SPC) when PegIntron is to be used in combination with ribavirin.

### 4.2 Posology and method of administration

Treatment should be initiated and monitored only by a physician experienced in the management of patients with hepatitis C.

#### Dose to be administered

PegIntron should be administered as a once weekly subcutaneous injection. The dose administered depends on whether it is used in combination with ribavirin or as monotherapy.

#### Combination therapy

PegIntron 1.5 micrograms/kg/week in combination with ribavirin capsules.

The dose of ribavirin to be used in combination with PegIntron is based on patient body weight (**Table 1**). Ribavirin capsules are to be administered orally each day in two divided doses with food (morning and evening).

<b>Table 1</b> Ribavirin dose based on body weight
--

Patient weight (kg)	Daily ribavirin dose	Number of 200 mg capsules
< 65	800 mg	4 <sup>a</sup>
65 – 85	1,000 mg	5 <sup>b</sup>
> 85	1,200 mg	6 <sup>c</sup>

a: 2 morning, 2 evening

b: 2 morning, 3 evening

c: 3 morning, 3 evening

**Duration of treatment:** Based on the results of clinical trials, it is recommended that patients be treated for at least six months. During those clinical trials in which patients were treated for one year, patients who failed to show a virological response after six months of treatment (HCV-RNA below lower limit of detection) were unlikely to become sustained virological responders (HCV-RNA below lower limit of detection six months after withdrawal of treatment).

- **Genotype 1:** Treatment should be continued for another six month period (i.e., a total of one year) in patients who exhibit negative HCV-RNA after six months of treatment.
- **Genotypes Non-1:** The decision to extend therapy to one year in patients with negative HCV-RNA after six months of treatment should be based on other prognostic factors (e.g., age > 40 years, male gender, bridging fibrosis).

### PegIntron monotherapy

As monotherapy the PegIntron regimen is 0.5 or 1.0 microgram/kg/week.

**Duration of treatment:** It is recommended that patients be treated initially for six months. In patients showing loss of HCV-RNA at six months, treatment is to be continued for an additional six months, i.e., one year of treatment.

### Dose modification for all patients

If severe adverse reactions or laboratory abnormalities develop during treatment with PegIntron monotherapy or PegIntron in combination with ribavirin, modify the dosages of each product if appropriate, until the adverse reactions abate. Guidelines were developed in clinical trials for dose modification (see Dosage modification guidelines, **Table 2a** for PegIntron monotherapy and **Table 2b** for PegIntron combination therapy with ribavirin).

<b>Table 2a</b> Dose modification guidelines for PegIntron monotherapy		
Laboratory values	Reduce PegIntron to one-half dose if:	Discontinue PegIntron if:
Neutrophils	< 0.75 x 10 <sup>9</sup> /l	< 0.5 x 10 <sup>9</sup> /l
Platelets	< 50 x 10 <sup>9</sup> /l	< 25 x 10 <sup>9</sup> /l

<b>Table 2b</b> Dose modification guidelines for combination therapy (with ribavirin)			
Laboratory values	Reduce only ribavirin dose to 600 mg/day* if:	Reduce only PegIntron dose to one-half dose if:	Discontinue combination therapy if:
Haemoglobin	< 10 g/dl	-	< 8.5 g/dl
Haemoglobin in: Patients with history of stable cardiac disease	≥ 2 g/dl decrease in haemoglobin during any four week period during treatment (permanent dose reduction)		< 12 g/dl after four weeks of dose reduction
White blood cells	-	< 1.5 x 10 <sup>9</sup> /l	< 1.0 x 10 <sup>9</sup> /l
Neutrophils	-	< 0.75 x 10 <sup>9</sup> /l	< 0.5 x 10 <sup>9</sup> /l
Platelets	-	< 50 x 10 <sup>9</sup> /l	< 25 x 10 <sup>9</sup> /l

Bilirubin – direct	-	-	2.5 x ULN**
Bilirubin – indirect	> 5 mg/dl	-	> 4 mg/dl (for > 4 weeks)
Creatinine	-	-	> 2.0 mg/dl
ALT/AST	-	-	2 x baseline and > 10 x ULN**

\* Patients whose dose of ribavirin is reduced to 600 mg daily receive one 200 mg capsule in the morning and two 200 mg capsules in the evening.

\*\* Upper limit of normal

### Special populations

**Use in renal impairment:** The clearance of PegIntron is reduced in patients with significant renal impairment. Patients with creatinine clearance  $\leq 50$  ml/minute must not be treated with PegIntron (see 5.2). It is recommended that patients with moderate renal impairment be closely monitored and that their weekly dose of PegIntron be reduced if medically appropriate.

**Use in hepatic impairment:** The safety and efficacy of PegIntron therapy has not been evaluated in patients with severe hepatic dysfunction, therefore PegIntron must not be used for these patients.

**Use in the elderly ( $\geq 65$  years of age):** There are no apparent age-related effects on the pharmacokinetics of PegIntron. Data from elderly patients treated with a single dose of PegIntron suggest no alteration in PegIntron dose is necessary based on age (see 5.2).

**Use in patients under the age of 18 years:** PegIntron is not recommended for use in children or adolescents under the age of 18, as there is no experience in this group.

### 4.3 Contraindications

- Hypersensitivity to the active substance or to any interferon or to any of the excipients;
- Pregnant women;
- Women who are breast-feeding;
- Existence of or a history of severe psychiatric condition, particularly severe depression, suicidal ideation or suicide attempt;
- A history of severe pre-existing cardiac disease, including unstable or uncontrolled cardiac disease in the previous six months (see 4.4);
- Severe, debilitating medical conditions, including patients with chronic renal failure or creatinine clearance  $< 50$  ml/minute;
- Autoimmune hepatitis or a history of autoimmune disease;
- Severe hepatic dysfunction or decompensated cirrhosis of the liver;
- Pre-existing thyroid disease unless it can be controlled with conventional treatment;
- Epilepsy and/or compromised central nervous system (CNS) function.

### 4.4 Special warnings and special precautions for use

There is no experience with PegIntron in combination with ribavirin in patients who have relapsed after interferon alpha + ribavirin therapy.

**Acute hypersensitivity:** Acute hypersensitivity reactions have been observed rarely during interferon alfa-2b therapy. If such a reaction develops during treatment with PegIntron, discontinue treatment and institute appropriate medical therapy immediately. Transient rashes do not necessitate interruption of treatment.

**Cardiovascular system:** As with interferon alfa-2b, patients with a history of congestive heart failure, myocardial infarction and/or previous or current arrhythmic disorders, receiving PegIntron therapy require close monitoring. It is recommended that patients who have pre-existing cardiac abnormalities have electrocardiograms taken prior to and during the course of treatment. Cardiac arrhythmias (primarily

supraventricular) usually respond to conventional therapy but may require discontinuation of PegIntron therapy.

**Psychiatric and Central Nervous System (CNS):** Severe CNS effects, particularly depression, suicidal ideation and attempted suicide have been observed in some patients during PegIntron therapy. Other CNS effects including aggressive behaviour, confusion and alterations of mental status have been observed with alpha interferon. If patients develop psychiatric or CNS problems, including clinical depression, it is recommended that the patient be carefully monitored due to the potential seriousness of these undesirable effects. If symptoms persist or worsen, discontinue PegIntron therapy.

**Liver function:** As with all interferons, discontinue treatment with PegIntron in patients who develop prolongation of coagulation markers which might indicate liver decompensation.

**Fever:** While fever may be associated with the flu-like syndrome reported commonly during interferon therapy, other causes of persistent fever must be ruled out.

**Hydration:** Adequate hydration must be maintained in patients undergoing PegIntron therapy since hypotension related to fluid depletion has been seen in some patients treated with alpha interferons. Fluid replacement may be necessary.

**Pulmonary changes:** Pulmonary infiltrates, pneumonitis, and pneumonia, occasionally resulting in fatality, have been observed rarely in interferon alpha treated patients. Any patient developing fever, cough, dyspnea or other respiratory symptoms must have a chest X-ray taken. If the chest X-ray shows pulmonary infiltrates or there is evidence of pulmonary function impairment, the patient is to be monitored closely, and, if appropriate, discontinue interferon alpha. Prompt discontinuation of interferon alpha administration and treatment with corticosteroids appear to be associated with resolution of pulmonary adverse events.

**Autoimmune disease:** The development of auto-antibodies has been reported during treatment with alpha interferons. Clinical manifestations of autoimmune disease during interferon therapy may occur more frequently in patients predisposed to the development of autoimmune disorders.

**Ocular changes:** Ophthalmologic disorders, including retinal haemorrhages, cotton wool spots, and retinal artery or vein obstruction have been reported in rare instances after treatment with alpha interferons. Any patient complaining of loss of visual acuity or visual field must have an eye examination. Because these ocular events may occur in conjunction with other disease states, a visual exam prior to initiation of PegIntron therapy is recommended in patients with diabetes mellitus or hypertension.

**Thyroid changes:** Infrequently, patients treated for chronic hepatitis C with interferon alpha have developed thyroid abnormalities, either hypothyroidism or hyperthyroidism. Determine thyroid stimulating hormone (TSH) levels if, during the course of therapy, a patient develops symptoms consistent with possible thyroid dysfunction. In the presence of thyroid dysfunction, PegIntron treatment may be continued if TSH levels can be maintained in the normal range by medication.

**Other:** Due to reports of interferon alpha exacerbating pre-existing psoriatic disease, use of PegIntron in patients with psoriasis is recommended only if the potential benefit justifies the potential risk.

**Laboratory tests:** Standard haematologic tests, blood chemistry and a test of thyroid function must be conducted in all patients prior to initiating therapy. Acceptable baseline values that may be considered as a guideline prior to initiation of PegIntron therapy are:

- Platelets  $\geq 100,000/\text{mm}^3$
- Neutrophil count  $\geq 1,500/\text{mm}^3$
- TSH level must be within normal limits

Laboratory evaluations are to be conducted at weeks 2 and 4 of therapy, and periodically thereafter as clinically appropriate.

#### 4.5 Interaction with other medicinal products and other forms of interaction

Results of a single-dose study with PegIntron demonstrated no effect on the activity of cytochrome (CY) P1A2, CYP2C8/9, CYP2D6, and hepatic CYP3A4 or N-acetyl transferase. Caution should be advised in the interpretation of these results as the use of other forms of interferon alpha result in a 50 % reduction in the clearance and thus a doubling of plasma concentrations of theophylline, a substrate of CYP1A2.

No pharmacokinetic interactions were noted between PegIntron and ribavirin in a multiple-dose pharmacokinetic study.

#### 4.6 Pregnancy and lactation

There are no adequate data on the use of interferon alfa-2b in pregnant women. Interferon alfa-2b has been shown to be abortifacient in primates. PegIntron is likely to also cause this effect. PegIntron should not be used during pregnancy (see 5.3).

PegIntron is recommended for use in fertile women only when they are using effective contraception during the treatment period.

**Lactation:** It is not known whether the components of this medicinal product are excreted in human milk. Because of the potential for adverse reactions in nursing infants, nursing must be discontinued prior to initiation of treatment.

#### 4.7 Effects on ability to drive and use machines

Patients who develop fatigue, somnolence or confusion during treatment with PegIntron are cautioned to avoid driving or operating machinery.

#### 4.8 Undesirable effects

The safety of PegIntron is evaluated from data from two clinical trials: one with PegIntron monotherapy, one with PegIntron in combination with ribavirin. In both cases, patients were treated for one year.

**Table 3** describes the regimens and patient exposure for one year of treatment in patients with no previous exposure to interferon (interferon-naïve patients). Because of a significant overlap in the pattern of undesirable effects with PegIntron monotherapy, groups of patients have been brought together in **Table 4** to show the pattern of reported effects for all monotherapy groups.

<b>Table 3</b> Regimens and patient exposure		
<b>Treatment</b>	<b>Regimen</b>	<b>Number of patients treated for one year</b>
PegIntron + ribavirin	PegIntron (1.5 micrograms/kg/week) + ribavirin (> 10.6 mg/kg/day)	188
Interferon alfa-2b + ribavirin	Interferon alfa-2b (3 MIU three times a week) + ribavirin (1,000/1,200 mg/day)	505
PegIntron monotherapy	PegIntron (0.5 microgram/kg/week)	315
	PegIntron (1.0 microgram/kg/week)	297
	PegIntron (1.5 micrograms/kg/week)	304

<b>Table 4</b> Undesirable effects reported in clinical trials (≥ 10 % of patients in PegIntron + ribavirin group)

Undesirable effects reported between 5 and 10 % in the treatment group receiving the recommended dose of PegIntron + ribavirin were increased sweating, chest pain, right upper quadrant (RUQ) pain, paresthaesia, hypothyroidism, constipation, dyspepsia, tachycardia, agitation, nervousness, menorrhagia, menstrual disorder, nonproductive cough, rhinitis, taste perversion, blurred vision.

Undesirable effects reported between 2 and 5 % in the treatment group receiving the recommended dose of PegIntron + ribavirin were injection site pain, flushing, hypotension, lacrimal gland disorder, erythema, malaise, hypertension, syncope, confusion, hyperesthesia, hypoesthesia, hypertonia, decreased libido, tremor, vertigo, hyperthyroidism, flatulence, gingival bleeding, glossitis, loose stools, stomatitis, ulcerative stomatitis, hearing impairment/loss, tinnitus, palpitation, thirst, thrombocytopenia, aggressive behaviour, somnolence, herpes simplex, fungal infection, amenorrhoea, prostatitis, otitis media, bronchitis, nasal congestion, respiratory disorder, rhinorrhea, sinusitis,

eczema, abnormal hair texture, photosensitivity reaction, erythematous rash, maculopapular rash, migraine, conjunctivitis, and lymphadenopathy.

Most cases of neutropaenia and thrombocytopaenia were mild (WHO grades 1 or 2). There were some cases of more severe neutropaenia in patients treated with the recommended doses of PegIntron in combination with ribavirin (WHO grade 3: 39 of 186 [21 %]; and WHO grade 4: 13 of 186 [7 %]).

In a clinical trial, approximately 1.2 % of patients treated with PegIntron or interferon alfa-2b in combination with ribavirin reported life-threatening psychiatric events during treatment. These events included suicidal ideation and attempted suicide.

Rarely reported events with interferon alfa-2b include retinal disorders, diabetes, and arrhythmia.

## **4.9 Overdose**

In clinical trials, cases of accidental overdose, at never more than twice the prescribed dose, were reported. There were no serious reactions. Undesirable effects resolved during continued administration of PegIntron.

## **5. PHARMACOLOGICAL PROPERTIES**

### **5.1 Pharmacodynamic properties**

Pharmacotherapeutic group: Immunostimulants, Cytokines and immunomodulators, Interferons, Peginterferon alfa-2b, ATC code: L03A B10.

PegIntron is a covalent conjugate of recombinant interferon alfa-2b with monomethoxy polyethylene glycol. The average molecular weight of the molecule is approximately 31,300 daltons.

#### **Interferon alfa-2b**

Recombinant interferon alfa-2b is obtained from a clone of *E. coli*, which harbours a genetically engineered plasmid hybrid encompassing an interferon alfa-2b gene from human leukocytes.

*In vitro* and *in vivo* studies suggest that the biological activity of PegIntron is derived from its interferon alfa-2b moiety.

Interferons exert their cellular activities by binding to specific membrane receptors on the cell surface. Studies with other interferons have demonstrated species specificity. However, certain monkey species, e.g., Rhesus monkeys, are susceptible to pharmacodynamic stimulation upon exposure to human type 1 interferons.

Once bound to the cell membrane, interferon initiates a complex sequence of intracellular events that include the induction of certain enzymes. It is thought that this process, at least in part, is responsible for the various cellular responses to interferon, including inhibition of virus replication in virus-infected cells, suppression of cell proliferation and such immunomodulating activities as enhancement of the phagocytic activity of macrophages and augmentation of the specific cytotoxicity of lymphocytes for target cells. Any or all of these activities may contribute to interferon's therapeutic effects.

Recombinant interferon alfa-2b also inhibits viral replication *in vitro* and *in vivo*. Although the exact antiviral mode of action of recombinant interferon alfa-2b is unknown, it appears to alter the host cell metabolism. This action inhibits viral replication or if replication occurs, the progeny virions are unable to leave the cell.

#### **PegIntron**

PegIntron pharmacodynamics were assessed in a rising single-dose trial in healthy subjects by examining changes in oral temperature, concentrations of effector proteins such as serum neopterin and 2'5'-oligoadenylate synthetase (2'5'-OAS), as well as white cell and neutrophil counts. Subjects treated with PegIntron showed mild dose-related elevations in body temperature. Following single doses of PegIntron between 0.25 and 2.0 micrograms/kg/week, serum neopterin concentration was increased in a dose-related manner. Neutrophil and white cell count reductions at the end of week 4 correlated with the dose of PegIntron.

### **PegIntron clinical trials**

Two pivotal trials have been conducted, one (C/I97-010) with PegIntron monotherapy; the other (C/I98-580) with PegIntron in combination with ribavirin. Eligible patients for these trials had chronic hepatitis C confirmed by a positive HCV-RNA polymerase chain reaction (PCR) assay (> 100 copies/ml), a liver biopsy consistent with a histological diagnosis of chronic hepatitis with no other cause for the chronic hepatitis, and abnormal serum ALT.

In the PegIntron monotherapy trial, a total of 916 naïve chronic hepatitis C patients were treated with PegIntron (0.5, 1.0 or 1.5 micrograms/kg/week) for one year with a follow-up period of six months. In addition, 303 patients received interferon alfa-2b (3 million International Units [MIU] three times a week [TIW]) as a comparator. This study showed that PegIntron was superior to interferon alfa-2b (**Table 5**).

In the PegIntron combination trial, 1,530 naïve patients were treated for one year with one of the following combination regimens:

- PegIntron (1.5 micrograms/kg/week) + ribavirin (800 mg/day), (n = 511).
- PegIntron (1.5 micrograms/kg/week for one month followed by 0.5 microgram/kg/week for 11 months) + ribavirin (1,000/1,200 mg/day), (n = 514).
- Interferon alfa-2b (3 MIU TIW) + ribavirin (1,000/1,200 mg/day) (n = 505).

In this trial, the combination of PegIntron (1.5 micrograms/kg/week) and ribavirin was significantly more effective than the combination of interferon alfa-2b and ribavirin (**Table 5**), particularly in patients infected with Genotype 1 (**Table 6**). Sustained response was assessed by the response rate six months after the cessation of treatment.

HCV genotype and baseline virus load are prognostic factors which are known to affect response rates. However, response rates in this trial were shown to be dependent also on the dose of ribavirin administered in combination with PegIntron or interferon alfa-2b. In those patients that received > 10.6 mg/kg ribavirin (800 mg dose in typical 75 kg patient), regardless of genotype or viral load, response rates were significantly higher than in those patients that received ≤ 10.6 mg/kg ribavirin (**Table 6**), while response rates in patients that received > 13.2 mg/kg ribavirin were even higher.

Response rates in this trial were increased if patients were able to maintain compliance. Regardless of genotype, patients who received the recommended combination regimen and received ≥ 80 % of their treatment with PegIntron and ribavirin had a higher sustained response 6 months after 1 year of treatment than those who took < 80 % of their treatment (72 % vs. 46 %).

I/R Interferon alfa-2b (3 MIU) + ribavirin (1,000/1,200 mg)

In the PegIntron monotherapy study, the Quality of Life was generally less affected by 0.5 microgram/kg of PegIntron than by either 1.0 microgram/kg of PegIntron once weekly or 3 MIU of interferon alfa-2b TIW.

## 5.2 Pharmacokinetic properties

PegIntron is a well characterized polyethylene glycol-modified (“pegylated”) derivative of interferon alfa-2b and is predominantly composed of monopegylated species. The plasma half-life of PegIntron is prolonged compared with non-pegylated interferon alfa-2b. PegIntron has a potential to depegylate to free interferon alfa-2b. The biologic activity of the pegylated isomers is qualitatively similar, but weaker than free interferon alfa-2b.

Following subcutaneous administration, maximal serum concentrations occur between 15-44 hours post-dose, and are sustained for up to 48-72 hours post-dose.

PegIntron  $C_{\max}$  and AUC measurements increase in a dose-related manner. Mean apparent volume of distribution is 0.99 l/kg.

Upon multiple dosing, there is an accumulation of immunoreactive interferons. There is, however, only a modest increase in biologic activity as measured by a bioassay.

Mean (SD) PegIntron elimination half-life is approximately 40 hours (13.3 hours), with apparent clearance of 22.0 ml/hr·kg. The mechanisms involved in clearance of interferons in man have not yet been fully elucidated. However, renal elimination may account for a minority (approximately 30 %) of PegIntron apparent clearance.

**Renal function:** Renal clearance appears to account for 30 % of total clearance of PegIntron. In a single dose study (1.0 microgram/kg) in patients with impaired renal function,  $C_{\max}$ , AUC, and half-life increased in relation to the degree of renal impairment.

Based on these data, no dose modification is recommended based on creatinine clearance. However, because of marked intra-subject variability in interferon pharmacokinetics, it is recommended that patients be monitored closely during treatment with PegIntron (see 4.2). Patients with severe renal dysfunction or creatinine clearance < 50 ml/min must not be treated with PegIntron.

**Hepatic function:** The pharmacokinetics of PegIntron have not been evaluated in patients with severe hepatic dysfunction.

**Elderly patients ≥ 65 years of age:** The pharmacokinetics of PegIntron following a single subcutaneous dose of 1.0 microgram/kg were not affected by age. The data suggest that no alteration in PegIntron dosage is necessary based on advancing age.

**Patients under the age of 18 years:** Specific pharmacokinetic evaluations have not been performed on these patients. PegIntron is indicated for the treatment of chronic hepatitis C only in patients 18 years of age or older.

**Interferon neutralising factors:** Interferon neutralising factor assays were performed on serum samples of patients who received PegIntron in the clinical trial. Interferon neutralising factors are antibodies which neutralise the antiviral activity of interferon. The clinical incidence of neutralising factors in patients who received PegIntron 0.5 micrograms/kg is 1.1 %.

### 5.3 Preclinical safety data

**PegIntron:** Adverse events not observed in clinical trials were not seen in toxicity studies in monkeys. These studies were limited to four weeks due to the appearance of anti-interferon antibodies in most monkeys.

Reproduction studies of PegIntron have not been performed. Interferon alfa-2b has been shown to be an abortifacient in primates. PegIntron is likely to also cause this effect. Effects on fertility have not been determined. PegIntron showed no genotoxic potential. (see 4.6 for relevant human data. It is not known whether the components of this medicinal product are excreted in human milk. Therefore, nursing must be discontinued prior to the initiation of therapy.)

The relative non-toxicity of monomethoxy-polyethylene glycol (mPEG), which is liberated from PegIntron by metabolism *in vivo* has been demonstrated in preclinical acute and subchronic toxicity studies in rodents and monkeys, standard embryo-foetal development studies and in *in vitro* mutagenicity assays.

**PegIntron plus ribavirin:** When used in combination with ribavirin, PegIntron did not cause any effects not previously seen with either active substance alone. The major treatment-related change was a reversible, mild to moderate anaemia, the severity of which was greater than that produced by either active substance alone.

## **6. PHARMACEUTICAL PARTICULARS**

### **6.1 List of excipients**

Powder for solution for injection:

Disodium phosphate, anhydrous,  
Sodium dihydrogen phosphate dihydrate,  
Sucrose,  
Polysorbate 80.

Solvent for parenteral use:

Water for injections.

Deliverable volume from pen = 0.5 ml. An overfill is also included for proper dispensing from the pen delivery system.

### **6.2 Incompatibilities**

This medicinal product should only be reconstituted with the solvent provided and must not be mixed with other medicinal products (see also 6.6).

### **6.3 Shelf life**

1 year

After reconstitution:

- Chemical and physical in-use stability has been demonstrated for 24 hours at 2°C - 8°C.
- From a microbiological point of view, the product is to be used immediately. If not used immediately, in-use storage times and conditions prior to use are the responsibility of the user and would normally not be longer than 24 hours at 2°C - 8°C.

### **6.4 Special precautions for storage**

Store at 2°C - 8°C (in a refrigerator)

### **6.5 Nature and contents of container**

The powder and solvent are both contained in a two-chamber cartridge, Type I flint glass, separated by a bromobutyl rubber plunger. The cartridge is sealed at one end with a polypropylene cap containing a bromobutyl rubber liner and at the other end by a bromobutyl rubber plunger.

PegIntron 150 micrograms is supplied as:

- 1 pen containing powder and solvent for solution for injection, 1 injection needle and 2 cleansing swabs;
- 4 pens containing powder and solvent for solution for injection, 4 injection needles and 8 cleansing swabs;
- 6 pens containing powder and solvent for solution for injection, 6 injection needles and 12 cleansing swabs;
- 12 pens containing powder and solvent for solution for injection, 12 injection needles and 24 cleansing swabs.

Not all pack sizes may be marketed.

## **6.6 Instructions for use and handling and disposal**

PegIntron pre-filled pen contains a powder of peginterferon alfa-2b and a solvent for solution at a strength of 150 micrograms for single use. Each pen is reconstituted with the solvent provided in the two-chamber cartridge (water for injections) for administration of up to 0.5 ml of solution. A small volume is lost during preparation of PegIntron for injection when the dose is measured and injected. Therefore, each pen contains an excess amount of solvent and PegIntron powder to ensure delivery of the labelled dose in 0.5 ml of PegIntron, solution for injection. The reconstituted solution has a concentration of 150 micrograms in 0.5 ml.

PegIntron is injected subcutaneously after reconstituting the powder as instructed, attaching an injection needle and setting the prescribed dose. A complete and illustrated set of instructions is provided in the Annex to the Package Leaflet.

Remove PegIntron pre-filled pen from the refrigerator before administration to allow the solvent to reach room temperature (not more than 25°C).

As for all parenteral medicinal products, inspect visually the reconstituted solution prior to administration. Do not use if discolouration is present. After administering the dose, discard the PegIntron pre-filled pen and any unused solution contained in it.

## **7. MARKETING AUTHORISATION HOLDER**

## **B. PACKAGE LEAFLET**

## PACKAGE LEAFLET

**Read all of this leaflet carefully before you start using this medicine.**

- Keep this leaflet. You may need to read it again.
- If you have further questions, please ask your doctor or your pharmacist.
- This medicine has been prescribed for you personally and you should not pass it on to others. It may harm them, even if their symptoms are the same as yours.

**In this leaflet:**

1. What PegIntron is and what it is used for
2. Before you use PegIntron
3. How to use PegIntron
4. Possible side effects
5. Storing PegIntron
6. Further information

**PegIntron** 50 micrograms powder and solvent for solution for injection in pre-filled pen

Peginterferon alfa-2b (conjugation of recombinant interferon alfa-2b with monomethoxy polyethylene glycol)

- The active substance is peginterferon alfa-2b, 50 micrograms/0.5 ml.
- The other ingredients are:  
Powder: disodium phosphate, anhydrous; sodium dihydrogen phosphate dihydrate, sucrose and polysorbate 80  
Solvent: water for injections

Marketing Authorisation Holder: SP Europe, 73, rue de Stalle, B-1180 Bruxelles, Belgium

Manufacturer: SP (Brinny) Company, Innishannon, County Cork, Ireland

### **1. WHAT PEGINTRON IS AND WHAT IT IS USED FOR**

The pharmaceutical form is: powder and solvent for solution for injection.

The powder and solvent are both contained in a two-chamber glass cartridge assembled into a single use pre-filled pen.

PegIntron 50 micrograms is available in different pack sizes:

- 1 pen containing powder and solvent for solution for injection, 1 injection needle and 2 cleansing swabs
- 4 pens containing powder and solvent for solution for injection, 4 injection needles and 8 cleansing swabs
- 6 pens containing powder and solvent for solution for injection, 6 injection needles and 12 cleansing swabs
- 12 pens containing powder and solvent for solution for injection, 12 injection needles and 24 cleansing swabs

Not all pack sizes may be marketed.

Interferons modify the response of the body's immune system to help fight infections and severe diseases. PegIntron, which contains an interferon, is used for the treatment of chronic hepatitis C, a viral infection of the liver.

PegIntron is best used for this treatment in combination with ribavirin.

PegIntron is used alone in case of intolerance or contraindication to ribavirin.

## **2. BEFORE YOU USE PEGINTRON**

PegIntron is not recommended for use in patients under the age of 18 years.

### **Do not use PegIntron:**

- If you are hypersensitive (allergic) to peginterferon alfa-2b or any of the other ingredients of PegIntron.
- If you are hypersensitive (allergic) to any interferon.
- If you are pregnant or breast feeding.
- If you have had a severe nervous or mental disorder, especially if you have been very depressed or have thought about suicide, or tried to harm yourself.
- If you have had severe heart problems, or if you have heart disease that has not been well controlled during the past 6 months.
- If you have severe medical conditions that leave you very weak, including severe kidney disease.
- If you have autoimmune hepatitis or any other problem with your immune system; if you are taking medicine that suppresses your immune system (your immune system protects you against infection and some diseases).
- If you have advanced, uncontrolled liver disease (other than hepatitis C).
- If you have thyroid disease that is not well controlled with medicines.
- If you have a condition that causes convulsions (seizures, or “fits”).

### **Take special care with PegIntron:**

- If you develop symptoms of a severe allergic reaction (such as difficulty in breathing, wheezing, or hives) while on this medication, seek medical help immediately.
- If you ever had a heart attack or a heart problem.
- If you have ever been treated for depression or any other nervous or mental disorder.
- If you have had a problem with your liver (other than hepatitis C).
- If you develop symptoms associated with a cold or other respiratory infection, such as fever, cough, or any difficulty in breathing, tell your doctor.
- If you are diabetic, your doctor may ask you to have an eye examination.
- If you have had any serious illness affecting your breathing or your blood.
- If you have psoriasis, it may become worse while you are using PegIntron.
- If you are planning to become pregnant, discuss this with your doctor before starting to use PegIntron.

### **Pregnancy**

Ask your doctor or pharmacist for advice before taking any medicine. Do not use PegIntron during pregnancy. The effect on human pregnancy is not known.

### **Breast-feeding**

Ask your doctor or pharmacist for advice before taking any medicine. It is not known whether this product is present in human milk. Therefore, do not breast-feed an infant if you are taking PegIntron.

### **Driving and using machines:**

Do not drive or operate any tools or machines if you feel tired, sleepy or confused while taking PegIntron.

### **Using other medicines:**

Please inform your doctor or pharmacist if you are taking or have recently taken any other medicines, even those not prescribed.

### **3. HOW TO USE PEGINTRON**

Your doctor has prescribed PegIntron specifically for you and your current condition; do not share this medicine with anyone else.

Your doctor has determined your dose of PegIntron based on your weight. If necessary, the dose may be changed during treatment.

#### **Combination treatment**

PegIntron, when given with ribavirin capsules, is usually given at a dose of 1.5 microgram/kg once a week.

Ribavirin capsules are taken every day, morning and evening. The number of ribavirin capsules you take depends on your weight.

- If you weigh less than 65 kg, take 2 capsules in the morning and 2 in the evening (total of 800 mg each day).
- If you weigh between 65 and 85 kg, take 2 capsules in the morning and 3 in the evening (total of 1,000 mg each day)
- If you weigh more than 85 kg, take 3 capsules in the morning and 3 in the evening (total 1,200 mg each day)

The combination treatment is continued for at least 6 months, and sometimes for one year.

#### **PegIntron alone:**

PegIntron, when given alone, is usually given at a dose of 0.5 or 1.0 microgram/kg once a week, for at least 6 months, and possibly for 1 year.

#### **All patients:**

If you are injecting PegIntron yourself, please be sure that the dose that has been prescribed for you is clearly provided on the package of medicine you receive.

If you have the impression that the effect of PegIntron is too strong or too weak, talk to your doctor or pharmacist.

PegIntron is intended for subcutaneous use. This means that it is injected through a short injection needle into the fatty tissue just under your skin. If you are injecting this medicine yourself, you will be instructed how to prepare and give the injection. Detailed instructions for subcutaneous administration are provided with this leaflet (see How to use the PegIntron pre-filled pen).

Prepare the dose just before you intend to inject it and use it immediately. Look carefully at the reconstituted solution prior to administration. Do not use if discolouration of the reconstituted solution is present. PegIntron is intended for single use only. Thus, after you give yourself the injection, discard the PegIntron pre-filled pen with any solution that is left in it.

Inject PegIntron once each week on the same day. Injecting it at the same time of day each week will help you not to forget to take it.

Use PegIntron exactly as prescribed by your doctor. Do not exceed the recommended dosage, and take it for as long as prescribed.

#### **If you use more PegIntron than you should:**

Tell your doctor or healthcare professional as soon as possible.

#### **If you forget to take PegIntron:**

Take the dose as soon as you remember, then continue your treatment as usual.

Do not take a double dose to make up for forgotten individual doses. Contact your doctor or pharmacist if needed.

#### **4. POSSIBLE SIDE EFFECTS**

Like all medicines, PegIntron can have side effects. Although not all of these side effects may occur, they may need medical attention if they do.

Check with your doctor immediately if any of the following side effects occur: chest pain; changes in the way your heart beats; breathing problems, confusion; feeling depressed, wanting to harm yourself, numbness or tingling feeling; trouble sleeping, thinking or concentrating; severe stomach pain; fever or chills beginning after a few weeks of treatment, pain in your lower back or side; problems with your eyesight or hearing; severe bleeding from your nose; your doctor will test your blood to ensure that your white blood cell (cells that fight infection) count and platelets (blood clotting cells) are at acceptable levels.

The most common side effects with the combination of PegIntron and ribavirin capsules are irritation or redness at the site of injection, headache, tired feeling, shaking chills, fever, flu-like symptoms, weakness, loss of weight, nausea, loss of appetite, diarrhoea or loose stools, stomach pain, vomiting, muscle aches, pain in joints and muscles, feeling depressed, irritability, trouble falling asleep or staying asleep, feeling anxious or nervous, difficulty concentrating, mood swings, hair loss, itching, dry skin, sore throat, coughing, difficult breathing, dizziness, virus infection, rash, and dry mouth.

Other common side effects that may occur with combination treatment are increased sweating, chest pain, pain on the right side around your ribs, numbness or tingling feeling, change in thyroid gland activity (which may make you feel tired or, less commonly, energetic), constipation, stomach upset, rapid heart rate, agitation, nervousness, difficult or irregular menstrual period, stuffy or runny nose, change in taste, blurred vision.

Less common are pain at the place of injection, flushing, low or high blood pressure, dry or teary eyes, redness of skin or skin disorder, feeling unwell, feeling faint, confusion, increased or decreased sensitivity to touch, tense muscles, loss of interest in sex, shaky hands, vertigo (spinning feeling), intestinal gas (flatus), bleeding gums or sores in mouth, changes in hearing or ringing in ears, thirst, aggressive behaviour, feeling sleepy, fever blisters, fungal infections, irritation of prostate gland, ear or respiratory infections, sinusitis, abnormal hair texture, sensitivity to sunlight, migraine headache, eye pain or infection, and swollen glands.

When PegIntron is used alone, some of these effects are less likely to occur, and some have not occurred at all.

If you notice any side effects not mentioned in this leaflet, please inform your doctor or pharmacist.

#### **5. STORING PEGINTRON**

Keep out of the reach and sight of children.

Store at 2°C - 8°C (in a refrigerator)

Do not use after the expiry date stated on the carton.

After reconstitution, use the reconstituted solution immediately or within 24 hours when stored at 2°C - 8°C (in a refrigerator).

Do not use PegIntron if you notice discolouration of the reconstituted solution.

## 6. FURTHER INFORMATION

For any information about this medicinal product, please contact the local representative of the Marketing Authorisation Holder.

## ANNEX TO THE PACKAGE LEAFLET

### How to use the PegIntron pre-filled pen

The following instructions explain how to inject yourself with the single use PegIntron pre-filled pen. Please read the instructions carefully and follow them step by step. Your doctor or his/her assistant will instruct you on how to self-inject with the PegIntron pre-filled pen. Do not attempt to inject yourself unless you are sure you understand the procedure and requirements for self-injection.

The PegIntron pre-filled pen is intended for use by one person only and must not be shared. Use the injection needle and cleansing swabs provided in the packaging only for the PegIntron pre-filled pen. Be sure the solution is at room temperature at the time of injection. Your doctor will have told you what dose you require for your therapy.

### Mixing

**It is important that you keep the PegIntron pre-filled pen upright (as shown in figure 1) during mixing, unless otherwise instructed.**

- Take the PegIntron pre-filled pen out of the refrigerator. Allow the medicine to come to room temperature.
- Wash your hands with soap and water.

**Figure 1**

- **Hold the PegIntron pre-filled pen upright** on a flat non-slip surface. You may want to hold the pre-filled pen using the grip.
- To mix the powder and the liquid, press the two halves together firmly until you hear the pre-filled pen click.
- Wait for several seconds until the powder is completely dissolved.
- **Gently turn the PegIntron pre-filled pen upside down twice. Do not shake.**
- Maintaining the PegIntron pre-filled pen upright, check through the window that the mixed PegIntron solution is clear in appearance prior to use. If it is not clear, do not use the pre-filled pen and call your doctor or nurse.
- Place the PegIntron pre-filled pen into the holder provided in the packaging.
- Disinfect the rubber membrane of the PegIntron pre-filled pen with one cleansing swab.
- Remove the protective paper tab from the injection needle.

**Figure 2**

- **Maintaining the PegIntron pre-filled pen upright in the holder**, gently push the injection needle onto the pre-filled pen and screw it securely in place.
- **Keep the PegIntron pre-filled pen pointed up.**
- **Do not take off the outer needle cap at this point.**
- You may see some liquid trickle out from under the cap, as the air has been expelled out of the pen.
- Wait about 5 seconds for this process to finish.

### Setting the dose

Figure 3

- Remove the PegIntron pre-filled pen from the holder.
- Holding the PegIntron pre-filled pen firmly, pull the dosing button out as far as it will go, until you see a dark ring on the pen.

**Note:** do not push the dosing button back in at this time. You will push it in when you are ready to self-inject the PegIntron.

Figure 4

- Turn the dosing button until your prescribed dose is aligned with the dosing tab.

### Injecting the solution

- Select the injection site. Your doctor will have told you which sites to use (e.g., thigh or abdomen).

**Note:** change your injection site each time.

- Clean the injection site skin with the second cleansing swab.

Figure 5

- Pull off the outer needle cap.
- There may be some liquid around the inner needle cap. This liquid is not part of your dose, this is extra. This is normal, as the air has been expelled out of the needle
- Once the injection site is dry, pull off the inner needle cap carefully exposing the injection needle.

Figure 6

- Hold the PegIntron pre-filled pen with your fingers wrapped around the barrel and your thumb on the dosing button.
- With your other hand, pinch a fold of loose skin.
- Insert the needle into the pinched skin at an angle of 45° to 90°.
- Press the dosing button down slowly and firmly until the button can no longer move.
- Maintain pressure on the dosing button for an additional 5 seconds to ensure that you get the complete dose.
- Remove the needle from your skin.

- Press the injection site with a small bandage or sterile gauze if necessary for a few seconds.
- Do not massage the injection site. If there is bleeding, cover with an adhesive bandage.
- Discard the PegIntron pre-filled pen with the needle safely in a closed rigid container.

## PACKAGE LEAFLET

**Read all of this leaflet carefully before you start using this medicine.**

- Keep this leaflet. You may need to read it again.
- If you have further questions, please ask your doctor or your pharmacist.
- This medicine has been prescribed for you personally and you should not pass it on to others. It may harm them, even if their symptoms are the same as yours.

### **In this leaflet:**

1. What PegIntron is and what it is used for
2. Before you use PegIntron
3. How to use PegIntron
4. Possible side effects
5. Storing PegIntron
6. Further information

**PegIntron** 80 micrograms powder and solvent for solution for injection in pre-filled pen

Peginterferon alfa-2b (conjugation of recombinant interferon alfa-2b with monomethoxy polyethylene glycol)

- The active substance is peginterferon alfa-2b, 80 micrograms/0.5 ml.
- The other ingredients are:  
Powder: disodium phosphate, anhydrous; sodium dihydrogen phosphate dihydrate, sucrose and polysorbate 80  
Solvent: water for injections

Marketing Authorisation Holder: SP Europe, 73, rue de Stalle, B-1180 Bruxelles, Belgium

Manufacturer: SP (Brinny) Company, Innishannon, County Cork, Ireland

## **1. WHAT PEGINTRON IS AND WHAT IT IS USED FOR**

The pharmaceutical form is: powder and solvent for solution for injection.

The powder and solvent are both contained in a two-chamber glass cartridge assembled into a single use pre-filled pen.

PegIntron 80 micrograms is available in different pack sizes:

- 1 pen containing powder and solvent for solution for injection, 1 injection needle and 2 cleansing swabs
- 4 pens containing powder and solvent for solution for injection, 4 injection needles and 8 cleansing swabs
- 6 pens containing powder and solvent for solution for injection, 6 injection needles and 12 cleansing swabs
- 12 pens containing powder and solvent for solution for injection, 12 injection needles and 24 cleansing swabs

Not all pack sizes may be marketed.

Interferons modify the response of the body's immune system to help fight infections and severe diseases. PegIntron, which contains an interferon, is used for the treatment of chronic hepatitis C, a viral infection of the liver.

PegIntron is best used for this treatment in combination with ribavirin.

PegIntron is used alone in case of intolerance or contraindication to ribavirin.

## **2. BEFORE YOU USE PEGINTRON**

PegIntron is not recommended for use in patients under the age of 18 years.

### **Do not use PegIntron:**

- If you are hypersensitive (allergic) to peginterferon alfa-2b or any of the other ingredients of PegIntron.
- If you are hypersensitive (allergic) to any interferon.
- If you are pregnant or breast feeding.
- If you have had a severe nervous or mental disorder, especially if you have been very depressed or have thought about suicide, or tried to harm yourself.
- If you have had severe heart problems, or if you have heart disease that has not been well controlled during the past 6 months.
- If you have severe medical conditions that leave you very weak, including severe kidney disease.
- If you have autoimmune hepatitis or any other problem with your immune system; if you are taking medicine that suppresses your immune system (your immune system protects you against infection and some diseases).
- If you have advanced, uncontrolled liver disease (other than hepatitis C).
- If you have thyroid disease that is not well controlled with medicines.
- If you have a condition that causes convulsions (seizures, or “fits”).

### **Take special care with PegIntron:**

- If you develop symptoms of a severe allergic reaction (such as difficulty in breathing, wheezing, or hives) while on this medication, seek medical help immediately.
- If you ever had a heart attack or a heart problem.
- If you have ever been treated for depression or any other nervous or mental disorder.
- If you have had a problem with your liver (other than hepatitis C).
- If you develop symptoms associated with a cold or other respiratory infection, such as fever, cough, or any difficulty in breathing, tell your doctor.
- If you are diabetic, your doctor may ask you to have an eye examination.
- If you have had any serious illness affecting your breathing or your blood.
- If you have psoriasis, it may become worse while you are using PegIntron.
- If you are planning to become pregnant, discuss this with your doctor before starting to use PegIntron.

### **Pregnancy**

Ask your doctor or pharmacist for advice before taking any medicine. Do not use PegIntron during pregnancy. The effect on human pregnancy is not known.

### **Breast-feeding**

Ask your doctor or pharmacist for advice before taking any medicine. It is not known whether this product is present in human milk. Therefore, do not breast-feed an infant if you are taking PegIntron.

### **Driving and using machines:**

Do not drive or operate any tools or machines if you feel tired, sleepy or confused while taking PegIntron.

### **Using other medicines:**

Please inform your doctor or pharmacist if you are taking or have recently taken any other medicines, even those not prescribed.

### **3. HOW TO USE PEGINTRON**

Your doctor has prescribed PegIntron specifically for you and your current condition; do not share this medicine with anyone else.

Your doctor has determined your dose of PegIntron based on your weight. If necessary, the dose may be changed during treatment.

#### **Combination treatment**

PegIntron, when given with ribavirin capsules, is usually given at a dose of 1.5 microgram/kg once a week.

Ribavirin capsules are taken every day, morning and evening. The number of ribavirin capsules you take depends on your weight.

- If you weigh less than 65 kg, take 2 capsules in the morning and 2 in the evening (total of 800 mg each day).
- If you weigh between 65 and 85 kg, take 2 capsules in the morning and 3 in the evening (total of 1,000 mg each day)
- If you weigh more than 85 kg, take 3 capsules in the morning and 3 in the evening (total 1,200 mg each day)

The combination treatment is continued for at least 6 months, and sometimes for one year.

#### **PegIntron alone:**

PegIntron, when given alone, is usually given at a dose of 0.5 or 1.0 microgram/kg once a week, for at least 6 months, and possibly for 1 year.

#### **All patients:**

If you are injecting PegIntron yourself, please be sure that the dose that has been prescribed for you is clearly provided on the package of medicine you receive.

If you have the impression that the effect of PegIntron is too strong or too weak, talk to your doctor or pharmacist.

PegIntron is intended for subcutaneous use. This means that it is injected through a short injection needle into the fatty tissue just under your skin. If you are injecting this medicine yourself, you will be instructed how to prepare and give the injection. Detailed instructions for subcutaneous administration are provided with this leaflet (see How to use the PegIntron pre-filled pen).

Prepare the dose just before you intend to inject it and use it immediately. Look carefully at the reconstituted solution prior to administration. Do not use if discolouration of the reconstituted solution is present. PegIntron is intended for single use only. Thus, after you give yourself the injection, discard the PegIntron pre-filled pen with any solution that is left in it.

Inject PegIntron once each week on the same day. Injecting it at the same time of day each week will help you not to forget to take it.

Use PegIntron exactly as prescribed by your doctor. Do not exceed the recommended dosage, and take it for as long as prescribed.

#### **If you use more PegIntron than you should:**

Tell your doctor or healthcare professional as soon as possible.

#### **If you forget to take PegIntron:**

Take the dose as soon as you remember, then continue your treatment as usual.

Do not take a double dose to make up for forgotten individual doses. Contact your doctor or pharmacist if needed.

#### **4. POSSIBLE SIDE EFFECTS**

Like all medicines, PegIntron can have side effects. Although not all of these side effects may occur, they may need medical attention if they do.

Check with your doctor immediately if any of the following side effects occur: chest pain; changes in the way your heart beats; breathing problems, confusion; feeling depressed, wanting to harm yourself, numbness or tingling feeling; trouble sleeping, thinking or concentrating; severe stomach pain; fever or chills beginning after a few weeks of treatment, pain in your lower back or side; problems with your eyesight or hearing; severe bleeding from your nose; your doctor will test your blood to ensure that your white blood cell (cells that fight infection) count and platelets (blood clotting cells) are at acceptable levels.

The most common side effects with the combination of PegIntron and ribavirin capsules are irritation or redness at the site of injection, headache, tired feeling, shaking chills, fever, flu-like symptoms, weakness, loss of weight, nausea, loss of appetite, diarrhoea or loose stools, stomach pain, vomiting, muscle aches, pain in joints and muscles, feeling depressed, irritability, trouble falling asleep or staying asleep, feeling anxious or nervous, difficulty concentrating, mood swings, hair loss, itching, dry skin, sore throat, coughing, difficult breathing, dizziness, virus infection, rash, and dry mouth.

Other common side effects that may occur with combination treatment are increased sweating, chest pain, pain on the right side around your ribs, numbness or tingling feeling, change in thyroid gland activity (which may make you feel tired or, less commonly, energetic), constipation, stomach upset, rapid heart rate, agitation, nervousness, difficult or irregular menstrual period, stuffy or runny nose, change in taste, blurred vision.

Less common are pain at the place of injection, flushing, low or high blood pressure, dry or teary eyes, redness of skin or skin disorder, feeling unwell, feeling faint, confusion, increased or decreased sensitivity to touch, tense muscles, loss of interest in sex, shaky hands, vertigo (spinning feeling), intestinal gas (flatus), bleeding gums or sores in mouth, changes in hearing or ringing in ears, thirst, aggressive behaviour, feeling sleepy, fever blisters, fungal infections, irritation of prostate gland, ear or respiratory infections, sinusitis, abnormal hair texture, sensitivity to sunlight, migraine headache, eye pain or infection, and swollen glands.

When PegIntron is used alone, some of these effects are less likely to occur, and some have not occurred at all.

If you notice any side effects not mentioned in this leaflet, please inform your doctor or pharmacist.

#### **5. STORING PEGINTRON**

Keep out of the reach and sight of children.

Store at 2°C - 8°C (in a refrigerator)

Do not use after the expiry date stated on the carton.

After reconstitution, use the reconstituted solution immediately or within 24 hours when stored at 2°C - 8°C (in a refrigerator).

Do not use PegIntron if you notice discolouration of the reconstituted solution.

## 6. FURTHER INFORMATION

For any information about this medicinal product, please contact the local representative of the Marketing Authorisation Holder.

## ANNEX TO THE PACKAGE LEAFLET

### How to use the PegIntron pre-filled pen

The following instructions explain how to inject yourself with the single use PegIntron pre-filled pen. Please read the instructions carefully and follow them step by step. Your doctor or his/her assistant will instruct you on how to self-inject with the PegIntron pre-filled pen. Do not attempt to inject yourself unless you are sure you understand the procedure and requirements for self-injection.

The PegIntron pre-filled pen is intended for use by one person only and must not be shared. Use the injection needle and cleansing swabs provided in the packaging only for the PegIntron pre-filled pen. Be sure the solution is at room temperature at the time of injection. Your doctor will have told you what dose you require for your therapy.

### Mixing

**It is important that you keep the PegIntron pre-filled pen upright (as shown in figure 1) during mixing, unless otherwise instructed.**

- Take the PegIntron pre-filled pen out of the refrigerator. Allow the medicine to come to room temperature.
- Wash your hands with soap and water.

**Figure 1**

- **Hold the PegIntron pre-filled pen upright** on a flat non-slip surface. You may want to hold the pre-filled pen using the grip.
- To mix the powder and the liquid, press the two halves together firmly until you hear the pre-filled pen click.
- Wait for several seconds until the powder is completely dissolved.
- **Gently turn the PegIntron pre-filled pen upside down twice. Do not shake.**
- Maintaining the PegIntron pre-filled pen upright, check through the window that the mixed PegIntron solution is clear in appearance prior to use. If it is not clear, do not use the pre-filled pen and call your doctor or nurse.
- Place the PegIntron pre-filled pen into the holder provided in the packaging.
- Disinfect the rubber membrane of the PegIntron pre-filled pen with one cleansing swab.
- Remove the protective paper tab from the injection needle.

**Figure 2**

- **Maintaining the PegIntron pre-filled pen upright in the holder**, gently push the injection needle onto the pre-filled pen and screw it securely in place.
- **Keep the PegIntron pre-filled pen pointed up.**
- **Do not take off the outer needle cap at this point.**
- You may see some liquid trickle out from under the cap, as the air has been expelled out of the pen.
- Wait about 5 seconds for this process to finish.

### Setting the dose

**Figure 3**

- Remove the PegIntron pre-filled pen from the holder.
- Holding the PegIntron pre-filled pen firmly, pull the dosing button out as far as it will go, until you see a dark ring on the pen.

**Note: do not push the dosing button back in at this time. You will push it in when you are ready to self-inject the PegIntron.**

**Figure 4**

- Turn the dosing button until your prescribed dose is aligned with the dosing tab.

### Injecting the solution

- Select the injection site. Your doctor will have told you which sites to use (e.g., thigh or abdomen).

**Note: change your injection site each time.**

- Clean the injection site skin with the second cleansing swab.

**Figure 5**

- Pull off the outer needle cap.
- There may be some liquid around the inner needle cap. This liquid is not part of your dose, this is extra. This is normal, as the air has been expelled out of the needle
- Once the injection site is dry, pull off the inner needle cap carefully exposing the injection needle.

**Figure 6**

- Hold the PegIntron pre-filled pen with your fingers wrapped around the barrel and your thumb on the dosing button.
- With your other hand, pinch a fold of loose skin.
- Insert the needle into the pinched skin at an angle of 45° to 90°.
- Press the dosing button down slowly and firmly until the button can no longer move.
- Maintain pressure on the dosing button for an additional 5 seconds to ensure that you get the complete dose.
- Remove the needle from your skin.

- Press the injection site with a small bandage or sterile gauze if necessary for a few seconds.
- Do not massage the injection site. If there is bleeding, cover with an adhesive bandage.
- Discard the PegIntron pre-filled pen with the needle safely in a closed rigid container.

## PACKAGE LEAFLET

**Read all of this leaflet carefully before you start using this medicine.**

- Keep this leaflet. You may need to read it again.
- If you have further questions, please ask your doctor or your pharmacist.
- This medicine has been prescribed for you personally and you should not pass it on to others. It may harm them, even if their symptoms are the same as yours.

**In this leaflet:**

1. What PegIntron is and what it is used for
2. Before you use PegIntron
3. How to use PegIntron
4. Possible side effects
5. Storing PegIntron
6. Further information

**PegIntron** 100 micrograms powder and solvent for solution for injection in pre-filled pen

Peginterferon alfa-2b (conjugation of recombinant interferon alfa-2b with monomethoxy polyethylene glycol)

- The active substance is peginterferon alfa-2b, 100 micrograms/0.5 ml.
- The other ingredients are:  
Powder: disodium phosphate, anhydrous; sodium dihydrogen phosphate dihydrate, sucrose and polysorbate 80  
Solvent: water for injections

Marketing Authorisation Holder: SP Europe, 73, rue de Stalle, B-1180 Bruxelles, Belgium

Manufacturer: SP (Brinny) Company, Innishannon, County Cork, Ireland

### **1. WHAT PEGINTRON IS AND WHAT IT IS USED FOR**

The pharmaceutical form is: powder and solvent for solution for injection.

The powder and solvent are both contained in a two-chamber glass cartridge assembled into a single use pre-filled pen.

PegIntron 100 micrograms is available in different pack sizes:

- 1 pen containing powder and solvent for solution for injection, 1 injection needle and 2 cleansing swabs
- 4 pens containing powder and solvent for solution for injection, 4 injection needles and 8 cleansing swabs
- 6 pens containing powder and solvent for solution for injection, 6 injection needles and 12 cleansing swabs
- 12 pens containing powder and solvent for solution for injection, 12 injection needles and 24 cleansing swabs

Not all pack sizes may be marketed.

Interferons modify the response of the body's immune system to help fight infections and severe diseases. PegIntron, which contains an interferon, is used for the treatment of chronic hepatitis C, a viral infection of the liver.

PegIntron is best used for this treatment in combination with ribavirin.

PegIntron is used alone in case of intolerance or contraindication to ribavirin.

## **2. BEFORE YOU USE PEGINTRON**

PegIntron is not recommended for use in patients under the age of 18 years.

### **Do not use PegIntron:**

- If you are hypersensitive (allergic) to peginterferon alfa-2b or any of the other ingredients of PegIntron.
- If you are hypersensitive (allergic) to any interferon.
- If you are pregnant or breast feeding.
- If you have had a severe nervous or mental disorder, especially if you have been very depressed or have thought about suicide, or tried to harm yourself.
- If you have had severe heart problems, or if you have heart disease that has not been well controlled during the past 6 months.
- If you have severe medical conditions that leave you very weak, including severe kidney disease.
- If you have autoimmune hepatitis or any other problem with your immune system; if you are taking medicine that suppresses your immune system (your immune system protects you against infection and some diseases).
- If you have advanced, uncontrolled liver disease (other than hepatitis C).
- If you have thyroid disease that is not well controlled with medicines.
- If you have a condition that causes convulsions (seizures, or “fits”).

### **Take special care with PegIntron:**

- If you develop symptoms of a severe allergic reaction (such as difficulty in breathing, wheezing, or hives) while on this medication, seek medical help immediately.
- If you ever had a heart attack or a heart problem.
- If you have ever been treated for depression or any other nervous or mental disorder.
- If you have had a problem with your liver (other than hepatitis C).
- If you develop symptoms associated with a cold or other respiratory infection, such as fever, cough, or any difficulty in breathing, tell your doctor.
- If you are diabetic, your doctor may ask you to have an eye examination.
- If you have had any serious illness affecting your breathing or your blood.
- If you have psoriasis, it may become worse while you are using PegIntron.
- If you are planning to become pregnant, discuss this with your doctor before starting to use PegIntron.

### **Pregnancy**

Ask your doctor or pharmacist for advice before taking any medicine. Do not use PegIntron during pregnancy. The effect on human pregnancy is not known.

### **Breast-feeding**

Ask your doctor or pharmacist for advice before taking any medicine. It is not known whether this product is present in human milk. Therefore, do not breast-feed an infant if you are taking PegIntron.

### **Driving and using machines:**

Do not drive or operate any tools or machines if you feel tired, sleepy or confused while taking PegIntron.

### **Using other medicines:**

Please inform your doctor or pharmacist if you are taking or have recently taken any other medicines, even those not prescribed.

### **3. HOW TO USE PEGINTRON**

Your doctor has prescribed PegIntron specifically for you and your current condition; do not share this medicine with anyone else.

Your doctor has determined your dose of PegIntron based on your weight. If necessary, the dose may be changed during treatment.

#### **Combination treatment**

PegIntron, when given with ribavirin capsules, is usually given at a dose of 1.5 microgram/kg once a week.

Ribavirin capsules are taken every day, morning and evening. The number of ribavirin capsules you take depends on your weight.

- If you weigh less than 65 kg, take 2 capsules in the morning and 2 in the evening (total of 800 mg each day).
- If you weigh between 65 and 85 kg, take 2 capsules in the morning and 3 in the evening (total of 1,000 mg each day)
- If you weigh more than 85 kg, take 3 capsules in the morning and 3 in the evening (total 1,200 mg each day)

The combination treatment is continued for at least 6 months, and sometimes for one year.

#### **PegIntron alone:**

PegIntron, when given alone, is usually given at a dose of 0.5 or 1.0 microgram/kg once a week, for at least 6 months, and possibly for 1 year.

#### **All patients:**

If you are injecting PegIntron yourself, please be sure that the dose that has been prescribed for you is clearly provided on the package of medicine you receive.

If you have the impression that the effect of PegIntron is too strong or too weak, talk to your doctor or pharmacist.

PegIntron is intended for subcutaneous use. This means that it is injected through a short injection needle into the fatty tissue just under your skin. If you are injecting this medicine yourself, you will be instructed how to prepare and give the injection. Detailed instructions for subcutaneous administration are provided with this leaflet (see How to use the PegIntron pre-filled pen).

Prepare the dose just before you intend to inject it and use it immediately. Look carefully at the reconstituted solution prior to administration. Do not use if discolouration of the reconstituted solution is present. PegIntron is intended for single use only. Thus, after you give yourself the injection, discard the PegIntron pre-filled pen with any solution that is left in it.

Inject PegIntron once each week on the same day. Injecting it at the same time of day each week will help you not to forget to take it.

Use PegIntron exactly as prescribed by your doctor. Do not exceed the recommended dosage, and take it for as long as prescribed.

#### **If you use more PegIntron than you should:**

Tell your doctor or healthcare professional as soon as possible.

#### **If you forget to take PegIntron:**

Take the dose as soon as you remember, then continue your treatment as usual.

Do not take a double dose to make up for forgotten individual doses. Contact your doctor or pharmacist if needed.

#### **4. POSSIBLE SIDE EFFECTS**

Like all medicines, PegIntron can have side effects. Although not all of these side effects may occur, they may need medical attention if they do.

Check with your doctor immediately if any of the following side effects occur: chest pain; changes in the way your heart beats; breathing problems, confusion; feeling depressed, wanting to harm yourself, numbness or tingling feeling; trouble sleeping, thinking or concentrating; severe stomach pain; fever or chills beginning after a few weeks of treatment, pain in your lower back or side; problems with your eyesight or hearing; severe bleeding from your nose; your doctor will test your blood to ensure that your white blood cell (cells that fight infection) count and platelets (blood clotting cells) are at acceptable levels.

The most common side effects with the combination of PegIntron and ribavirin capsules are irritation or redness at the site of injection, headache, tired feeling, shaking chills, fever, flu-like symptoms, weakness, loss of weight, nausea, loss of appetite, diarrhoea or loose stools, stomach pain, vomiting, muscle aches, pain in joints and muscles, feeling depressed, irritability, trouble falling asleep or staying asleep, feeling anxious or nervous, difficulty concentrating, mood swings, hair loss, itching, dry skin, sore throat, coughing, difficult breathing, dizziness, virus infection, rash, and dry mouth.

Other common side effects that may occur with combination treatment are increased sweating, chest pain, pain on the right side around your ribs, numbness or tingling feeling, change in thyroid gland activity (which may make you feel tired or, less commonly, energetic), constipation, stomach upset, rapid heart rate, agitation, nervousness, difficult or irregular menstrual period, stuffy or runny nose, change in taste, blurred vision.

Less common are pain at the place of injection, flushing, low or high blood pressure, dry or teary eyes, redness of skin or skin disorder, feeling unwell, feeling faint, confusion, increased or decreased sensitivity to touch, tense muscles, loss of interest in sex, shaky hands, vertigo (spinning feeling), intestinal gas (flatus), bleeding gums or sores in mouth, changes in hearing or ringing in ears, thirst, aggressive behaviour, feeling sleepy, fever blisters, fungal infections, irritation of prostate gland, ear or respiratory infections, sinusitis, abnormal hair texture, sensitivity to sunlight, migraine headache, eye pain or infection, and swollen glands.

When PegIntron is used alone, some of these effects are less likely to occur, and some have not occurred at all.

If you notice any side effects not mentioned in this leaflet, please inform your doctor or pharmacist.

#### **5. STORING PEGINTRON**

Keep out of the reach and sight of children.

Store at 2°C - 8°C (in a refrigerator)

Do not use after the expiry date stated on the carton.

After reconstitution, use the reconstituted solution immediately or within 24 hours when stored at 2°C - 8°C (in a refrigerator).

Do not use PegIntron if you notice discolouration of the reconstituted solution.

## 6. FURTHER INFORMATION

For any information about this medicinal product, please contact the local representative of the Marketing Authorisation Holder.

## ANNEX TO THE PACKAGE LEAFLET

### How to use the PegIntron pre-filled pen

The following instructions explain how to inject yourself with the single use PegIntron pre-filled pen. Please read the instructions carefully and follow them step by step. Your doctor or his/her assistant will instruct you on how to self-inject with the PegIntron pre-filled pen. Do not attempt to inject yourself unless you are sure you understand the procedure and requirements for self-injection.

The PegIntron pre-filled pen is intended for use by one person only and must not be shared. Use the injection needle and cleansing swabs provided in the packaging only for the PegIntron pre-filled pen. Be sure the solution is at room temperature at the time of injection. Your doctor will have told you what dose you require for your therapy.

### Mixing

**It is important that you keep the PegIntron pre-filled pen upright (as shown in figure 1) during mixing, unless otherwise instructed.**

- Take the PegIntron pre-filled pen out of the refrigerator. Allow the medicine to come to room temperature.
- Wash your hands with soap and water.

**Figure 1**

- **Hold the PegIntron pre-filled pen upright** on a flat non-slip surface. You may want to hold the pre-filled pen using the grip.
- To mix the powder and the liquid, press the two halves together firmly until you hear the pre-filled pen click.
- Wait for several seconds until the powder is completely dissolved.
- **Gently turn the PegIntron pre-filled pen upside down twice. Do not shake.**
- Maintaining the PegIntron pre-filled pen upright, check through the window that the mixed PegIntron solution is clear in appearance prior to use. If it is not clear, do not use the pre-filled pen and call your doctor or nurse.
- Place the PegIntron pre-filled pen into the holder provided in the packaging.
- Disinfect the rubber membrane of the PegIntron pre-filled pen with one cleansing swab.
- Remove the protective paper tab from the injection needle.

**Figure 2**

- **Maintaining the PegIntron pre-filled pen upright in the holder**, gently push the injection needle onto the pre-filled pen and screw it securely in place.
- **Keep the PegIntron pre-filled pen pointed up.**
- **Do not take off the outer needle cap at this point.**
- You may see some liquid trickle out from under the cap, as the air has been expelled out of the pen.
- Wait about 5 seconds for this process to finish.

### Setting the dose

Figure 3

- Remove the PegIntron pre-filled pen from the holder.
- Holding the PegIntron pre-filled pen firmly, pull the dosing button out as far as it will go, until you see a dark ring on the pen.

**Note:** do not push the dosing button back in at this time. You will push it in when you are ready to self-inject the PegIntron.

Figure 4

- Turn the dosing button until your prescribed dose is aligned with the dosing tab.

### Injecting the solution

- Select the injection site. Your doctor will have told you which sites to use (e.g., thigh or abdomen).

**Note:** change your injection site each time.

- Clean the injection site skin with the second cleansing swab.

Figure 5

- Pull off the outer needle cap.
- There may be some liquid around the inner needle cap. This liquid is not part of your dose, this is extra. This is normal, as the air has been expelled out of the needle
- Once the injection site is dry, pull off the inner needle cap carefully exposing the injection needle.

Figure 6

- Hold the PegIntron pre-filled pen with your fingers wrapped around the barrel and your thumb on the dosing button.
- With your other hand, pinch a fold of loose skin.
- Insert the needle into the pinched skin at an angle of 45° to 90°.
- Press the dosing button down slowly and firmly until the button can no longer move.
- Maintain pressure on the dosing button for an additional 5 seconds to ensure that you get the complete dose.
- Remove the needle from your skin.

- Press the injection site with a small bandage or sterile gauze if necessary for a few seconds.
- Do not massage the injection site. If there is bleeding, cover with an adhesive bandage.
- Discard the PegIntron pre-filled pen with the needle safely in a closed rigid container.

## PACKAGE LEAFLET

**Read all of this leaflet carefully before you start using this medicine.**

- Keep this leaflet. You may need to read it again.
- If you have further questions, please ask your doctor or your pharmacist.
- This medicine has been prescribed for you personally and you should not pass it on to others. It may harm them, even if their symptoms are the same as yours.

**In this leaflet:**

1. What PegIntron is and what it is used for
2. Before you use PegIntron
3. How to use PegIntron
4. Possible side effects
5. Storing PegIntron
6. Further information

**PegIntron** 120 micrograms powder and solvent for solution for injection in pre-filled pen

Peginterferon alfa-2b (conjugation of recombinant interferon alfa-2b with monomethoxy polyethylene glycol)

- The active substance is peginterferon alfa-2b, 120 micrograms/0.5 ml.
- The other ingredients are:  
Powder: disodium phosphate, anhydrous; sodium dihydrogen phosphate dihydrate, sucrose and polysorbate 80  
Solvent: water for injections

Marketing Authorisation Holder: SP Europe, 73, rue de Stalle, B-1180 Bruxelles, Belgium

Manufacturer: SP (Brinny) Company, Innishannon, County Cork, Ireland

### **1. WHAT PEGINTRON IS AND WHAT IT IS USED FOR**

The pharmaceutical form is: powder and solvent for solution for injection.

The powder and solvent are both contained in a two-chamber glass cartridge assembled into a single use pre-filled pen.

PegIntron 120 micrograms is available in different pack sizes:

- 1 pen containing powder and solvent for solution for injection, 1 injection needle and 2 cleansing swabs
- 4 pens containing powder and solvent for solution for injection, 4 injection needles and 8 cleansing swabs
- 6 pens containing powder and solvent for solution for injection, 6 injection needles and 12 cleansing swabs
- 12 pens containing powder and solvent for solution for injection, 12 injection needles and 24 cleansing swabs

Not all pack sizes may be marketed.

Interferons modify the response of the body's immune system to help fight infections and severe diseases. PegIntron, which contains an interferon, is used for the treatment of chronic hepatitis C, a viral infection of the liver.

PegIntron is best used for this treatment in combination with ribavirin.

PegIntron is used alone in case of intolerance or contraindication to ribavirin.

## **2. BEFORE YOU USE PEGINTRON**

PegIntron is not recommended for use in patients under the age of 18 years.

### **Do not use PegIntron:**

- If you are hypersensitive (allergic) to peginterferon alfa-2b or any of the other ingredients of PegIntron.
- If you are hypersensitive (allergic) to any interferon.
- If you are pregnant or breast feeding.
- If you have had a severe nervous or mental disorder, especially if you have been very depressed or have thought about suicide, or tried to harm yourself.
- If you have had severe heart problems, or if you have heart disease that has not been well controlled during the past 6 months.
- If you have severe medical conditions that leave you very weak, including severe kidney disease.
- If you have autoimmune hepatitis or any other problem with your immune system; if you are taking medicine that suppresses your immune system (your immune system protects you against infection and some diseases).
- If you have advanced, uncontrolled liver disease (other than hepatitis C).
- If you have thyroid disease that is not well controlled with medicines.
- If you have a condition that causes convulsions (seizures, or “fits”).

### **Take special care with PegIntron:**

- If you develop symptoms of a severe allergic reaction (such as difficulty in breathing, wheezing, or hives) while on this medication, seek medical help immediately.
- If you ever had a heart attack or a heart problem.
- If you have ever been treated for depression or any other nervous or mental disorder.
- If you have had a problem with your liver (other than hepatitis C).
- If you develop symptoms associated with a cold or other respiratory infection, such as fever, cough, or any difficulty in breathing, tell your doctor.
- If you are diabetic, your doctor may ask you to have an eye examination.
- If you have had any serious illness affecting your breathing or your blood.
- If you have psoriasis, it may become worse while you are using PegIntron.
- If you are planning to become pregnant, discuss this with your doctor before starting to use PegIntron.

### **Pregnancy**

Ask your doctor or pharmacist for advice before taking any medicine. Do not use PegIntron during pregnancy. The effect on human pregnancy is not known.

### **Breast-feeding**

Ask your doctor or pharmacist for advice before taking any medicine. It is not known whether this product is present in human milk. Therefore, do not breast-feed an infant if you are taking PegIntron.

### **Driving and using machines:**

Do not drive or operate any tools or machines if you feel tired, sleepy or confused while taking PegIntron.

### **Using other medicines:**

Please inform your doctor or pharmacist if you are taking or have recently taken any other medicines, even those not prescribed.

### 3. HOW TO USE PEGINTRON

Your doctor has prescribed PegIntron specifically for you and your current condition; do not share this medicine with anyone else.

Your doctor has determined your dose of PegIntron based on your weight. If necessary, the dose may be changed during treatment.

#### **Combination treatment**

PegIntron, when given with ribavirin capsules, is usually given at a dose of 1.5 microgram/kg once a week.

Ribavirin capsules are taken every day, morning and evening. The number of ribavirin capsules you take depends on your weight.

- If you weigh less than 65 kg, take 2 capsules in the morning and 2 in the evening (total of 800 mg each day).
- If you weigh between 65 and 85 kg, take 2 capsules in the morning and 3 in the evening (total of 1,000 mg each day)
- If you weigh more than 85 kg, take 3 capsules in the morning and 3 in the evening (total 1,200 mg each day)

The combination treatment is continued for at least 6 months, and sometimes for one year.

#### **PegIntron alone:**

PegIntron, when given alone, is usually given at a dose of 0.5 or 1.0 microgram/kg once a week, for at least 6 months, and possibly for 1 year.

#### **All patients:**

If you are injecting PegIntron yourself, please be sure that the dose that has been prescribed for you is clearly provided on the package of medicine you receive.

If you have the impression that the effect of PegIntron is too strong or too weak, talk to your doctor or pharmacist.

PegIntron is intended for subcutaneous use. This means that it is injected through a short injection needle into the fatty tissue just under your skin. If you are injecting this medicine yourself, you will be instructed how to prepare and give the injection. Detailed instructions for subcutaneous administration are provided with this leaflet (see How to use the PegIntron pre-filled pen).

Prepare the dose just before you intend to inject it and use it immediately. Look carefully at the reconstituted solution prior to administration. Do not use if discolouration of the reconstituted solution is present. PegIntron is intended for single use only. Thus, after you give yourself the injection, discard the PegIntron pre-filled pen with any solution that is left in it.

Inject PegIntron once each week on the same day. Injecting it at the same time of day each week will help you not to forget to take it.

Use PegIntron exactly as prescribed by your doctor. Do not exceed the recommended dosage, and take it for as long as prescribed.

#### **If you use more PegIntron than you should:**

Tell your doctor or healthcare professional as soon as possible.

#### **If you forget to take PegIntron:**

Take the dose as soon as you remember, then continue your treatment as usual.

Do not take a double dose to make up for forgotten individual doses. Contact your doctor or pharmacist if needed.

#### **4. POSSIBLE SIDE EFFECTS**

Like all medicines, PegIntron can have side effects. Although not all of these side effects may occur, they may need medical attention if they do.

Check with your doctor immediately if any of the following side effects occur: chest pain; changes in the way your heart beats; breathing problems, confusion; feeling depressed, wanting to harm yourself, numbness or tingling feeling; trouble sleeping, thinking or concentrating; severe stomach pain; fever or chills beginning after a few weeks of treatment, pain in your lower back or side; problems with your eyesight or hearing; severe bleeding from your nose; your doctor will test your blood to ensure that your white blood cell (cells that fight infection) count and platelets (blood clotting cells) are at acceptable levels.

The most common side effects with the combination of PegIntron and ribavirin capsules are irritation or redness at the site of injection, headache, tired feeling, shaking chills, fever, flu-like symptoms, weakness, loss of weight, nausea, loss of appetite, diarrhoea or loose stools, stomach pain, vomiting, muscle aches, pain in joints and muscles, feeling depressed, irritability, trouble falling asleep or staying asleep, feeling anxious or nervous, difficulty concentrating, mood swings, hair loss, itching, dry skin, sore throat, coughing, difficult breathing, dizziness, virus infection, rash, and dry mouth.

Other common side effects that may occur with combination treatment are increased sweating, chest pain, pain on the right side around your ribs, numbness or tingling feeling, change in thyroid gland activity (which may make you feel tired or, less commonly, energetic), constipation, stomach upset, rapid heart rate, agitation, nervousness, difficult or irregular menstrual period, stuffy or runny nose, change in taste, blurred vision.

Less common are pain at the place of injection, flushing, low or high blood pressure, dry or teary eyes, redness of skin or skin disorder, feeling unwell, feeling faint, confusion, increased or decreased sensitivity to touch, tense muscles, loss of interest in sex, shaky hands, vertigo (spinning feeling), intestinal gas (flatus), bleeding gums or sores in mouth, changes in hearing or ringing in ears, thirst, aggressive behaviour, feeling sleepy, fever blisters, fungal infections, irritation of prostate gland, ear or respiratory infections, sinusitis, abnormal hair texture, sensitivity to sunlight, migraine headache, eye pain or infection, and swollen glands.

When PegIntron is used alone, some of these effects are less likely to occur, and some have not occurred at all.

If you notice any side effects not mentioned in this leaflet, please inform your doctor or pharmacist.

#### **5. STORING PEGINTRON**

Keep out of the reach and sight of children.

Store at 2°C - 8°C (in a refrigerator)

Do not use after the expiry date stated on the carton.

After reconstitution, use the reconstituted solution immediately or within 24 hours when stored at 2°C - 8°C (in a refrigerator).

Do not use PegIntron if you notice discolouration of the reconstituted solution.

## 6. FURTHER INFORMATION

For any information about this medicinal product, please contact the local representative of the Marketing Authorisation Holder.

## ANNEX TO THE PACKAGE LEAFLET

### How to use the PegIntron pre-filled pen

The following instructions explain how to inject yourself with the single use PegIntron pre-filled pen. Please read the instructions carefully and follow them step by step. Your doctor or his/her assistant will instruct you on how to self-inject with the PegIntron pre-filled pen. Do not attempt to inject yourself unless you are sure you understand the procedure and requirements for self-injection.

The PegIntron pre-filled pen is intended for use by one person only and must not be shared. Use the injection needle and cleansing swabs provided in the packaging only for the PegIntron pre-filled pen. Be sure the solution is at room temperature at the time of injection. Your doctor will have told you what dose you require for your therapy.

### Mixing

**It is important that you keep the PegIntron pre-filled pen upright (as shown in figure 1) during mixing, unless otherwise instructed.**

- Take the PegIntron pre-filled pen out of the refrigerator. Allow the medicine to come to room temperature.
- Wash your hands with soap and water.

**Figure 1**

- **Hold the PegIntron pre-filled pen upright** on a flat non-slip surface. You may want to hold the pre-filled pen using the grip.
- To mix the powder and the liquid, press the two halves together firmly until you hear the pre-filled pen click.
- Wait for several seconds until the powder is completely dissolved.
- **Gently turn the PegIntron pre-filled pen upside down twice. Do not shake.**
- Maintaining the PegIntron pre-filled pen upright, check through the window that the mixed PegIntron solution is clear in appearance prior to use. If it is not clear, do not use the pre-filled pen and call your doctor or nurse.
- Place the PegIntron pre-filled pen into the holder provided in the packaging.
- Disinfect the rubber membrane of the PegIntron pre-filled pen with one cleansing swab.
- Remove the protective paper tab from the injection needle.

**Figure 2**

- **Maintaining the PegIntron pre-filled pen upright in the holder**, gently push the injection needle onto the pre-filled pen and screw it securely in place.
- **Keep the PegIntron pre-filled pen pointed up.**
- **Do not take off the outer needle cap at this point.**
- You may see some liquid trickle out from under the cap, as the air has been expelled out of the pen.
- Wait about 5 seconds for this process to finish.

### Setting the dose

Figure 3

- Remove the PegIntron pre-filled pen from the holder.
- Holding the PegIntron pre-filled pen firmly, pull the dosing button out as far as it will go, until you see a dark ring on the pen.

**Note:** do not push the dosing button back in at this time. You will push it in when you are ready to self-inject the PegIntron.

Figure 4

- Turn the dosing button until your prescribed dose is aligned with the dosing tab.

### Injecting the solution

- Select the injection site. Your doctor will have told you which sites to use (e.g., thigh or abdomen).

**Note:** change your injection site each time.

- Clean the injection site skin with the second cleansing swab.

Figure 5

- Pull off the outer needle cap.
- There may be some liquid around the inner needle cap. This liquid is not part of your dose, this is extra. This is normal, as the air has been expelled out of the needle
- Once the injection site is dry, pull off the inner needle cap carefully exposing the injection needle.

Figure 6

- Hold the PegIntron pre-filled pen with your fingers wrapped around the barrel and your thumb on the dosing button.
- With your other hand, pinch a fold of loose skin.
- Insert the needle into the pinched skin at an angle of 45° to 90°.
- Press the dosing button down slowly and firmly until the button can no longer move.
- Maintain pressure on the dosing button for an additional 5 seconds to ensure that you get the complete dose.
- Remove the needle from your skin.

- Press the injection site with a small bandage or sterile gauze if necessary for a few seconds.
- Do not massage the injection site. If there is bleeding, cover with an adhesive bandage.
- Discard the PegIntron pre-filled pen with the needle safely in a closed rigid container.

## PACKAGE LEAFLET

**Read all of this leaflet carefully before you start using this medicine.**

- Keep this leaflet. You may need to read it again.
- If you have further questions, please ask your doctor or your pharmacist.
- This medicine has been prescribed for you personally and you should not pass it on to others. It may harm them, even if their symptoms are the same as yours.

**In this leaflet:**

1. What PegIntron is and what it is used for
2. Before you use PegIntron
3. How to use PegIntron
4. Possible side effects
5. Storing PegIntron
6. Further information

**PegIntron** 150 micrograms powder and solvent for solution for injection in pre-filled pen

Peginterferon alfa-2b (conjugation of recombinant interferon alfa-2b with monomethoxy polyethylene glycol)

- The active substance is peginterferon alfa-2b, 150 micrograms/0.5 ml.
- The other ingredients are:  
Powder: disodium phosphate, anhydrous; sodium dihydrogen phosphate dihydrate, sucrose and polysorbate 80  
Solvent: water for injections

Marketing Authorisation Holder: SP Europe, 73, rue de Stalle, B-1180 Bruxelles, Belgium

Manufacturer: SP (Brinny) Company, Innishannon, County Cork, Ireland

### **1. WHAT PEGINTRON IS AND WHAT IT IS USED FOR**

The pharmaceutical form is: powder and solvent for solution for injection.

The powder and solvent are both contained in a two-chamber glass cartridge assembled into a single use pre-filled pen.

PegIntron 150 micrograms is available in different pack sizes:

- 1 pen containing powder and solvent for solution for injection, 1 injection needle and 2 cleansing swabs
- 4 pens containing powder and solvent for solution for injection, 4 injection needles and 8 cleansing swabs
- 6 pens containing powder and solvent for solution for injection, 6 injection needles and 12 cleansing swabs
- 12 pens containing powder and solvent for solution for injection, 12 injection needles and 24 cleansing swabs

Not all pack sizes may be marketed.

Interferons modify the response of the body's immune system to help fight infections and severe diseases. PegIntron, which contains an interferon, is used for the treatment of chronic hepatitis C, a viral infection of the liver.

PegIntron is best used for this treatment in combination with ribavirin.

PegIntron is used alone in case of intolerance or contraindication to ribavirin.

## **2. BEFORE YOU USE PEGINTRON**

PegIntron is not recommended for use in patients under the age of 18 years.

### **Do not use PegIntron:**

- If you are hypersensitive (allergic) to peginterferon alfa-2b or any of the other ingredients of PegIntron.
- If you are hypersensitive (allergic) to any interferon.
- If you are pregnant or breast feeding.
- If you have had a severe nervous or mental disorder, especially if you have been very depressed or have thought about suicide, or tried to harm yourself.
- If you have had severe heart problems, or if you have heart disease that has not been well controlled during the past 6 months.
- If you have severe medical conditions that leave you very weak, including severe kidney disease.
- If you have autoimmune hepatitis or any other problem with your immune system; if you are taking medicine that suppresses your immune system (your immune system protects you against infection and some diseases).
- If you have advanced, uncontrolled liver disease (other than hepatitis C).
- If you have thyroid disease that is not well controlled with medicines.
- If you have a condition that causes convulsions (seizures, or “fits”).

### **Take special care with PegIntron:**

- If you develop symptoms of a severe allergic reaction (such as difficulty in breathing, wheezing, or hives) while on this medication, seek medical help immediately.
- If you ever had a heart attack or a heart problem.
- If you have ever been treated for depression or any other nervous or mental disorder.
- If you have had a problem with your liver (other than hepatitis C).
- If you develop symptoms associated with a cold or other respiratory infection, such as fever, cough, or any difficulty in breathing, tell your doctor.
- If you are diabetic, your doctor may ask you to have an eye examination.
- If you have had any serious illness affecting your breathing or your blood.
- If you have psoriasis, it may become worse while you are using PegIntron.
- If you are planning to become pregnant, discuss this with your doctor before starting to use PegIntron.

### **Pregnancy**

Ask your doctor or pharmacist for advice before taking any medicine. Do not use PegIntron during pregnancy. The effect on human pregnancy is not known.

### **Breast-feeding**

Ask your doctor or pharmacist for advice before taking any medicine. It is not known whether this product is present in human milk. Therefore, do not breast-feed an infant if you are taking PegIntron.

### **Driving and using machines:**

Do not drive or operate any tools or machines if you feel tired, sleepy or confused while taking PegIntron.

### **Using other medicines:**

Please inform your doctor or pharmacist if you are taking or have recently taken any other medicines, even those not prescribed.

### **3. HOW TO USE PEGINTRON**

Your doctor has prescribed PegIntron specifically for you and your current condition; do not share this medicine with anyone else.

Your doctor has determined your dose of PegIntron based on your weight. If necessary, the dose may be changed during treatment.

#### **Combination treatment**

PegIntron, when given with ribavirin capsules, is usually given at a dose of 1.5 microgram/kg once a week.

Ribavirin capsules are taken every day, morning and evening. The number of ribavirin capsules you take depends on your weight.

- If you weigh less than 65 kg, take 2 capsules in the morning and 2 in the evening (total of 800 mg each day).
- If you weigh between 65 and 85 kg, take 2 capsules in the morning and 3 in the evening (total of 1,000 mg each day)
- If you weigh more than 85 kg, take 3 capsules in the morning and 3 in the evening (total 1,200 mg each day)

The combination treatment is continued for at least 6 months, and sometimes for one year.

#### **PegIntron alone:**

PegIntron, when given alone, is usually given at a dose of 0.5 or 1.0 microgram/kg once a week, for at least 6 months, and possibly for 1 year.

#### **All patients:**

If you are injecting PegIntron yourself, please be sure that the dose that has been prescribed for you is clearly provided on the package of medicine you receive.

If you have the impression that the effect of PegIntron is too strong or too weak, talk to your doctor or pharmacist.

PegIntron is intended for subcutaneous use. This means that it is injected through a short injection needle into the fatty tissue just under your skin. If you are injecting this medicine yourself, you will be instructed how to prepare and give the injection. Detailed instructions for subcutaneous administration are provided with this leaflet (see How to use the PegIntron pre-filled pen).

Prepare the dose just before you intend to inject it and use it immediately. Look carefully at the reconstituted solution prior to administration. Do not use if discolouration of the reconstituted solution is present. PegIntron is intended for single use only. Thus, after you give yourself the injection, discard the PegIntron pre-filled pen with any solution that is left in it.

Inject PegIntron once each week on the same day. Injecting it at the same time of day each week will help you not to forget to take it.

Use PegIntron exactly as prescribed by your doctor. Do not exceed the recommended dosage, and take it for as long as prescribed.

#### **If you use more PegIntron than you should:**

Tell your doctor or healthcare professional as soon as possible.

#### **If you forget to take PegIntron:**

Take the dose as soon as you remember, then continue your treatment as usual.

Do not take a double dose to make up for forgotten individual doses. Contact your doctor or pharmacist if needed.

#### **4. POSSIBLE SIDE EFFECTS**

Like all medicines, PegIntron can have side effects. Although not all of these side effects may occur, they may need medical attention if they do.

Check with your doctor immediately if any of the following side effects occur: chest pain; changes in the way your heart beats; breathing problems, confusion; feeling depressed, wanting to harm yourself, numbness or tingling feeling; trouble sleeping, thinking or concentrating; severe stomach pain; fever or chills beginning after a few weeks of treatment, pain in your lower back or side; problems with your eyesight or hearing; severe bleeding from your nose; your doctor will test your blood to ensure that your white blood cell (cells that fight infection) count and platelets (blood clotting cells) are at acceptable levels.

The most common side effects with the combination of PegIntron and ribavirin capsules are irritation or redness at the site of injection, headache, tired feeling, shaking chills, fever, flu-like symptoms, weakness, loss of weight, nausea, loss of appetite, diarrhoea or loose stools, stomach pain, vomiting, muscle aches, pain in joints and muscles, feeling depressed, irritability, trouble falling asleep or staying asleep, feeling anxious or nervous, difficulty concentrating, mood swings, hair loss, itching, dry skin, sore throat, coughing, difficult breathing, dizziness, virus infection, rash, and dry mouth.

Other common side effects that may occur with combination treatment are increased sweating, chest pain, pain on the right side around your ribs, numbness or tingling feeling, change in thyroid gland activity (which may make you feel tired or, less commonly, energetic), constipation, stomach upset, rapid heart rate, agitation, nervousness, difficult or irregular menstrual period, stuffy or runny nose, change in taste, blurred vision.

Less common are pain at the place of injection, flushing, low or high blood pressure, dry or teary eyes, redness of skin or skin disorder, feeling unwell, feeling faint, confusion, increased or decreased sensitivity to touch, tense muscles, loss of interest in sex, shaky hands, vertigo (spinning feeling), intestinal gas (flatus), bleeding gums or sores in mouth, changes in hearing or ringing in ears, thirst, aggressive behaviour, feeling sleepy, fever blisters, fungal infections, irritation of prostate gland, ear or respiratory infections, sinusitis, abnormal hair texture, sensitivity to sunlight, migraine headache, eye pain or infection, and swollen glands.

When PegIntron is used alone, some of these effects are less likely to occur, and some have not occurred at all.

If you notice any side effects not mentioned in this leaflet, please inform your doctor or pharmacist.

#### **5. STORING PEGINTRON**

Keep out of the reach and sight of children.

Store at 2°C - 8°C (in a refrigerator)

Do not use after the expiry date stated on the carton.

After reconstitution, use the reconstituted solution immediately or within 24 hours when stored at 2°C - 8°C (in a refrigerator).

Do not use PegIntron if you notice discolouration of the reconstituted solution.

## 6. FURTHER INFORMATION

For any information about this medicinal product, please contact the local representative of the Marketing Authorisation Holder.

## ANNEX TO THE PACKAGE LEAFLET

### How to use the PegIntron pre-filled pen

The following instructions explain how to inject yourself with the single use PegIntron pre-filled pen. Please read the instructions carefully and follow them step by step. Your doctor or his/her assistant will instruct you on how to self-inject with the PegIntron pre-filled pen. Do not attempt to inject yourself unless you are sure you understand the procedure and requirements for self-injection.

The PegIntron pre-filled pen is intended for use by one person only and must not be shared. Use the injection needle and cleansing swabs provided in the packaging only for the PegIntron pre-filled pen. Be sure the solution is at room temperature at the time of injection. Your doctor will have told you what dose you require for your therapy.

### Mixing

**It is important that you keep the PegIntron pre-filled pen upright (as shown in figure 1) during mixing, unless otherwise instructed.**

- Take the PegIntron pre-filled pen out of the refrigerator. Allow the medicine to come to room temperature.
- Wash your hands with soap and water.

**Figure 1**

- **Hold the PegIntron pre-filled pen upright** on a flat non-slip surface. You may want to hold the pre-filled pen using the grip.
- To mix the powder and the liquid, press the two halves together firmly until you hear the pre-filled pen click.
- Wait for several seconds until the powder is completely dissolved.
- **Gently turn the PegIntron pre-filled pen upside down twice. Do not shake.**
- Maintaining the PegIntron pre-filled pen upright, check through the window that the mixed PegIntron solution is clear in appearance prior to use. If it is not clear, do not use the pre-filled pen and call your doctor or nurse.
- Place the PegIntron pre-filled pen into the holder provided in the packaging.
- Disinfect the rubber membrane of the PegIntron pre-filled pen with one cleansing swab.
- Remove the protective paper tab from the injection needle.

**Figure 2**

- **Maintaining the PegIntron pre-filled pen upright in the holder**, gently push the injection needle onto the pre-filled pen and screw it securely in place.
- **Keep the PegIntron pre-filled pen pointed up.**
- **Do not take off the outer needle cap at this point.**
- You may see some liquid trickle out from under the cap, as the air has been expelled out of the pen.
- Wait about 5 seconds for this process to finish.

### Setting the dose

Figure 3

- Remove the PegIntron pre-filled pen from the holder.
- Holding the PegIntron pre-filled pen firmly, pull the dosing button out as far as it will go, until you see a dark ring on the pen.

**Note:** do not push the dosing button back in at this time. You will push it in when you are ready to self-inject the PegIntron.

Figure 4

- Turn the dosing button until your prescribed dose is aligned with the dosing tab.

### Injecting the solution

- Select the injection site. Your doctor will have told you which sites to use (e.g., thigh or abdomen).

**Note:** change your injection site each time.

- Clean the injection site skin with the second cleansing swab.

Figure 5

- Pull off the outer needle cap.
- There may be some liquid around the inner needle cap. This liquid is not part of your dose, this is extra. This is normal, as the air has been expelled out of the needle
- Once the injection site is dry, pull off the inner needle cap carefully exposing the injection needle.

Figure 6

- Hold the PegIntron pre-filled pen with your fingers wrapped around the barrel and your thumb on the dosing button.
- With your other hand, pinch a fold of loose skin.
- Insert the needle into the pinched skin at an angle of 45° to 90°.
- Press the dosing button down slowly and firmly until the button can no longer move.
- Maintain pressure on the dosing button for an additional 5 seconds to ensure that you get the complete dose.
- Remove the needle from your skin.

- Press the injection site with a small bandage or sterile gauze if necessary for a few seconds.
- Do not massage the injection site. If there is bleeding, cover with an adhesive bandage.
- Discard the PegIntron pre-filled pen with the needle safely in a closed rigid container.
